PILOT ECONOMICS

Same AI. 80% Fail. 20% Get 171% ROI.

The difference isn't the model. It's whether anyone built the system.

UNROLL THE DRAWING

SECTION 02 · THE FAILURE RATE

RAND Found 80.3% Of Pilots Deliver Nothing

MIT's number is worse: 95% of generative AI pilots never reach production scale.

FIG. 2

80.3%

ZERO MEASURABLE VALUE

MIT: 95% NEVER SCALE

SECTION 03 · WHAT BREAKS FIRST

Demo Logic Versus Production Logic

A demo proves the model can do the task once. Production proves it does it correctly ten thousand times.

FIG. 3

THE DEMO		THE SYSTEM
— ONE CLEAN INPUT	VS	• DEFINED SUCCESS CRITERIA
— NO ERROR PATH		• HANDLES THE EDGE CASE

SCALE · PRODUCTION

VERYDIAN

SECTION 04 · THE PATTERN

Four Things Every Working Pilot Had

Clean data. Funded change management. A success metric defined before build starts, not after. Skip one and you get a screenshot, not infrastructure.

FIG. 4

- [x] CLEAN DATA PIPELINE — PASS
- [x] CHANGE MANAGEMENT FUNDED — PASS
- [x] SUCCESS METRIC DEFINED PRE-BUILD — LIVE
- [x] OWNER ACCOUNTABLE POST-LAUNCH — PASS

SCALE · PRODUCTION

VERYDIAN

SECTION 05 · THE BUILD ORDER

Precision Gets Built In Three Phases

Scoping catches what the pilot skipped. Build hardens the failure paths. Production measures against the metric you set on day one.
