

PERMISSION SCOPING

The Sentence Everyone Skipped In NVIDIA's Post

Ten thousand employees got the headline. Read-only access got buried three paragraphs down.

READ ON —

THE BURIED LINE

What NVIDIA's Post Actually Said

Zero-data retention governs the deployment. Agents reach production systems with read-only permissions through the command line, nothing more.

EXHIBIT 02

VERYDIAN

WHAT GOT MISSED

The Headline Or The Detail That Matters

Ten thousand employees is a big number that proves adoption. Read-only access is the sentence that decides whether it's safe.

EXHIBIT 03

VERYDIAN

HEADLINE

— 10,000 EMPLOYEES

— BIG NUMBER

VS

BURIED DETAIL

● READ-ONLY ACCESS

● ZERO RETENTION

THE PATTERN

My Default Now, Every Engagement

CRM access, ops stack, whatever the client hands over. Read-only first, scoped writes added only after I've watched it behave.

EXHIBIT 04

VERYDIAN

EARNING ACCESS

Trust Gets Earned In Stages, Not Granted

Full access isn't the starting point. It's read-only, then scoped writes, then trust, in that order, every time.

EXHIBIT 05

VERYDIAN

Scope Access Before You Scope Ambition

This is the default I run on every Verydian engagement.
