

# Building on infrastructure that's still being built.

— Raw observations from the Verydian founding year

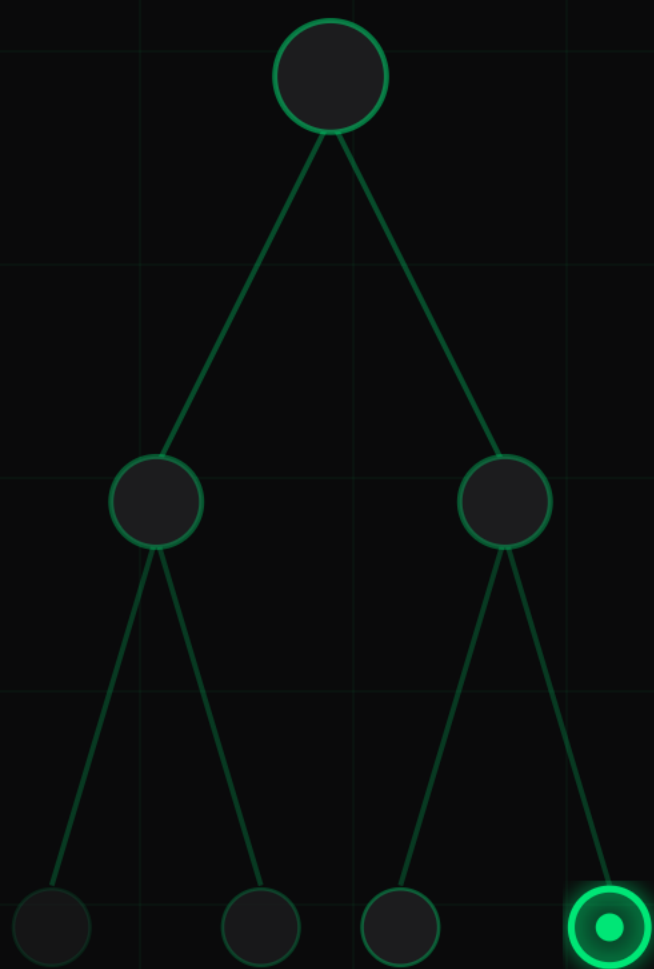

CONV.SIGNAL

02

# Anthropic doubled rate limits mid-quarter. No announcement.

The queuing layer I built to work around the old limits now manages a constraint that no longer exists.

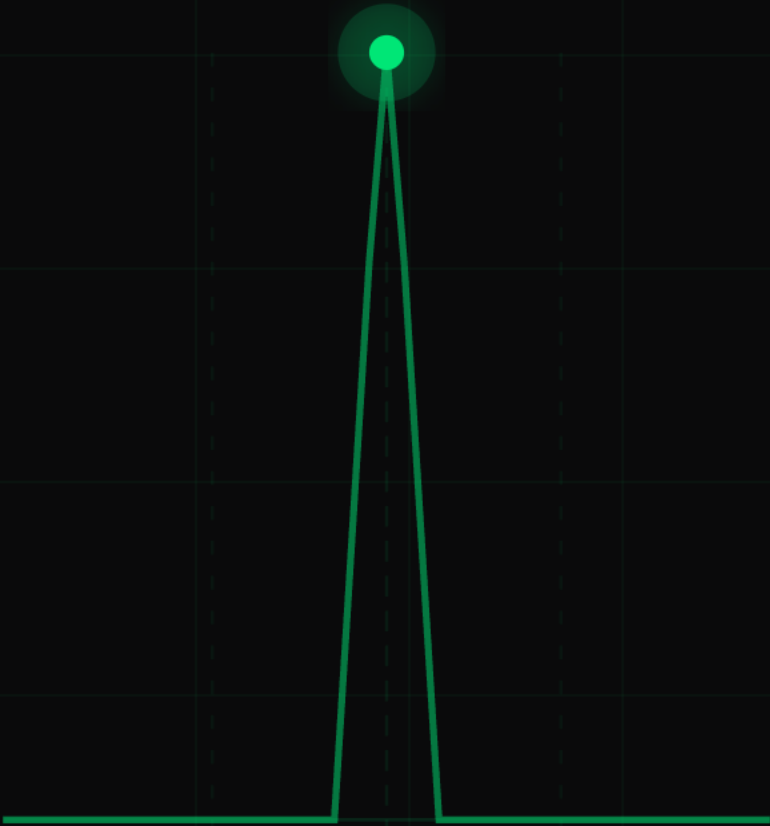

FORK.TREE

03

The benchmark question has a shelf life.

A production recommendation made in March needs a footnote by May. The tools don't hold still.

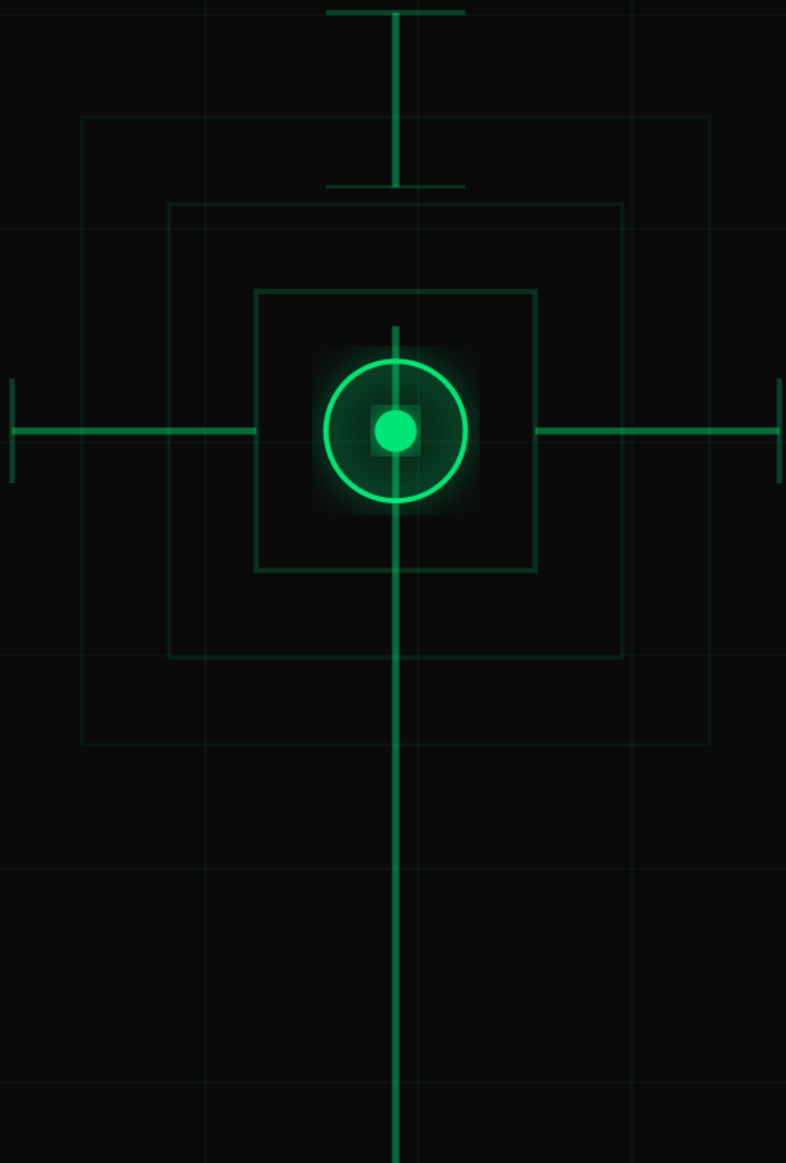

04

# Nobody talks about this honestly.

Powerful tools. Unstable dependencies. Your design today may be working around a limitation that disappears next month.

SYS.PULSE

SYS.LOCK

05

The approach: build for outcomes, not tool specifics.

Abstract the model layer. Keep business logic model-agnostic. New primitives should be additive, not rewrites.

BUILD.LOG / FOUNDER JOURNEY

FOLLOW ME —  
I BUILD IN PUBLIC

Some weeks the  
design holds. Some  
weeks it doesn't.

I build this in public. Follow along for real frameworks,  
honest lessons, and how Verydian actually gets built —  
week by week.
