DATA NOT MARKUP

I replaced 8,501 lines of templates with 1,314

In July I rebuilt my carousel system around data, not markup. Here is what that bought and what it cost.

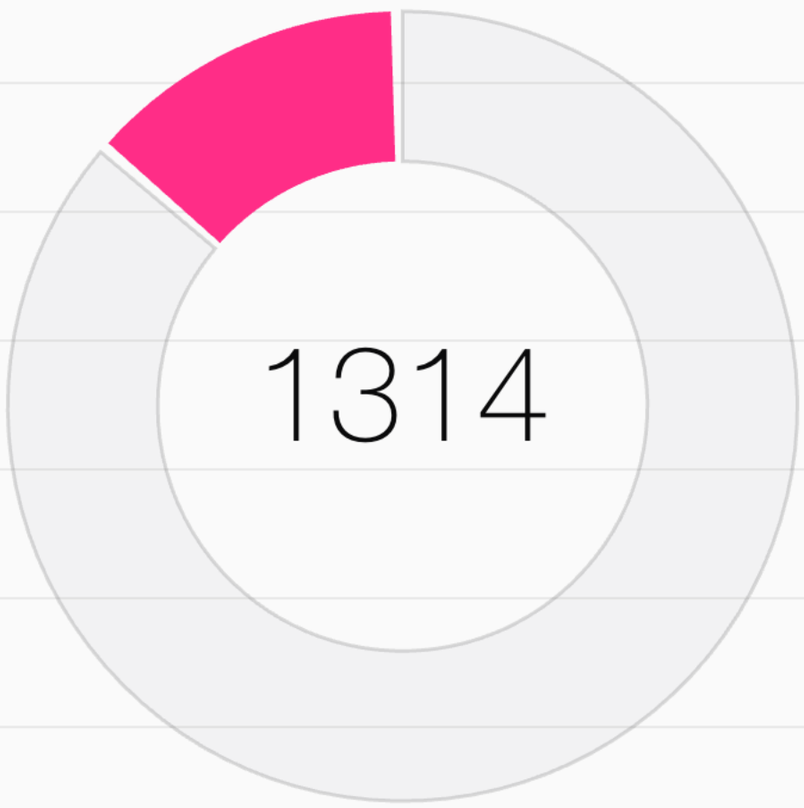

OPEN THE LEDGER

ENTRY 02 · THE LINE COUNTS

18 templates became 8 layouts, one stylesheet, one engine

Lines of code. The v1 LinkedIn templates were 18 files and 8,501 lines. The v2 template and diagram layer is 1,314 lines. Render and validate scripts are counted separately.

RECORDED SYSTEM VERYDIAN

V1 TEMPLATES 8501

V2 LAYER 1314

ENTRY 03 · WHAT IS IN 1,314

1,314 lines in three parts

Eight layout shells total 742 lines, 79 to 115 each. The diagram engine is 383. The shared stylesheet is 189.

ENTRY 04 · BY CONSTRUCTION

Variety comes from the roster, not from review

Each week takes six consecutive layouts from an 8-layout roster, offset by week number. Each slide's geometry is seeded from week, post and slide. The validator rejects a repeated family in a post.

RECORDED SYSTEM — VERYDIAN

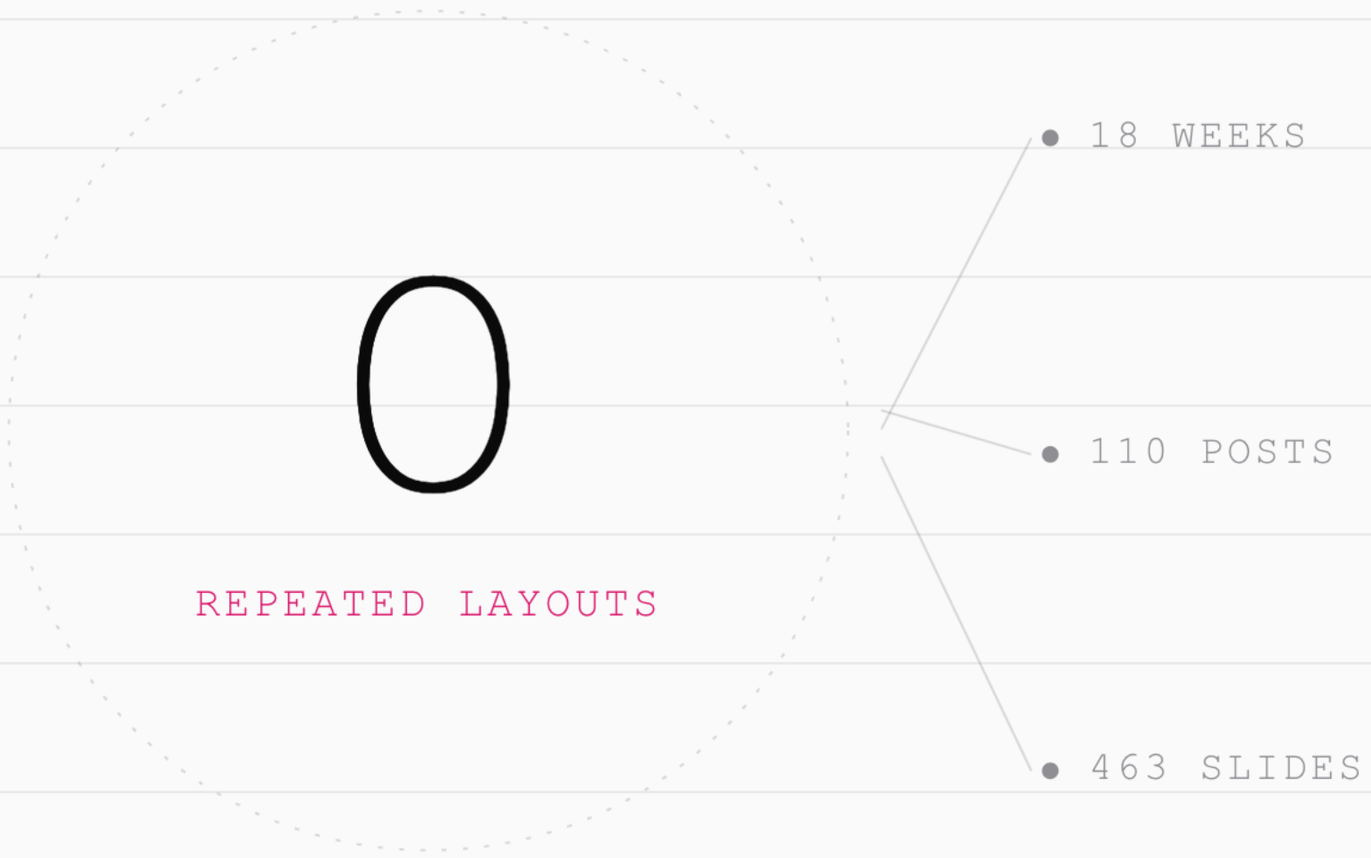

ENTRY 05 · THE RESULT

W29 to W46: no week repeated a layout

110 posts, 463 slides with a visual spec, 0 repeated families within a post. All 12 families used. Each layout used 12 to 15 times.

RECORDED SYSTEM

VERYDIAN

ENTRY 06 · WHAT IT COST

Four honest costs

The renderer clips unbroken label tokens at about 14 to 16 characters. W33's checklist landed on slide 5 in 4 of 6 posts. The old family cap was impossible. Unique does not mean good.
