

PRODUCTION READINESS

# Zendesk Markets 80%. Most Teams Never Ship.

The vendor ceiling is real under good conditions. Most teams building the same thing never reach production.

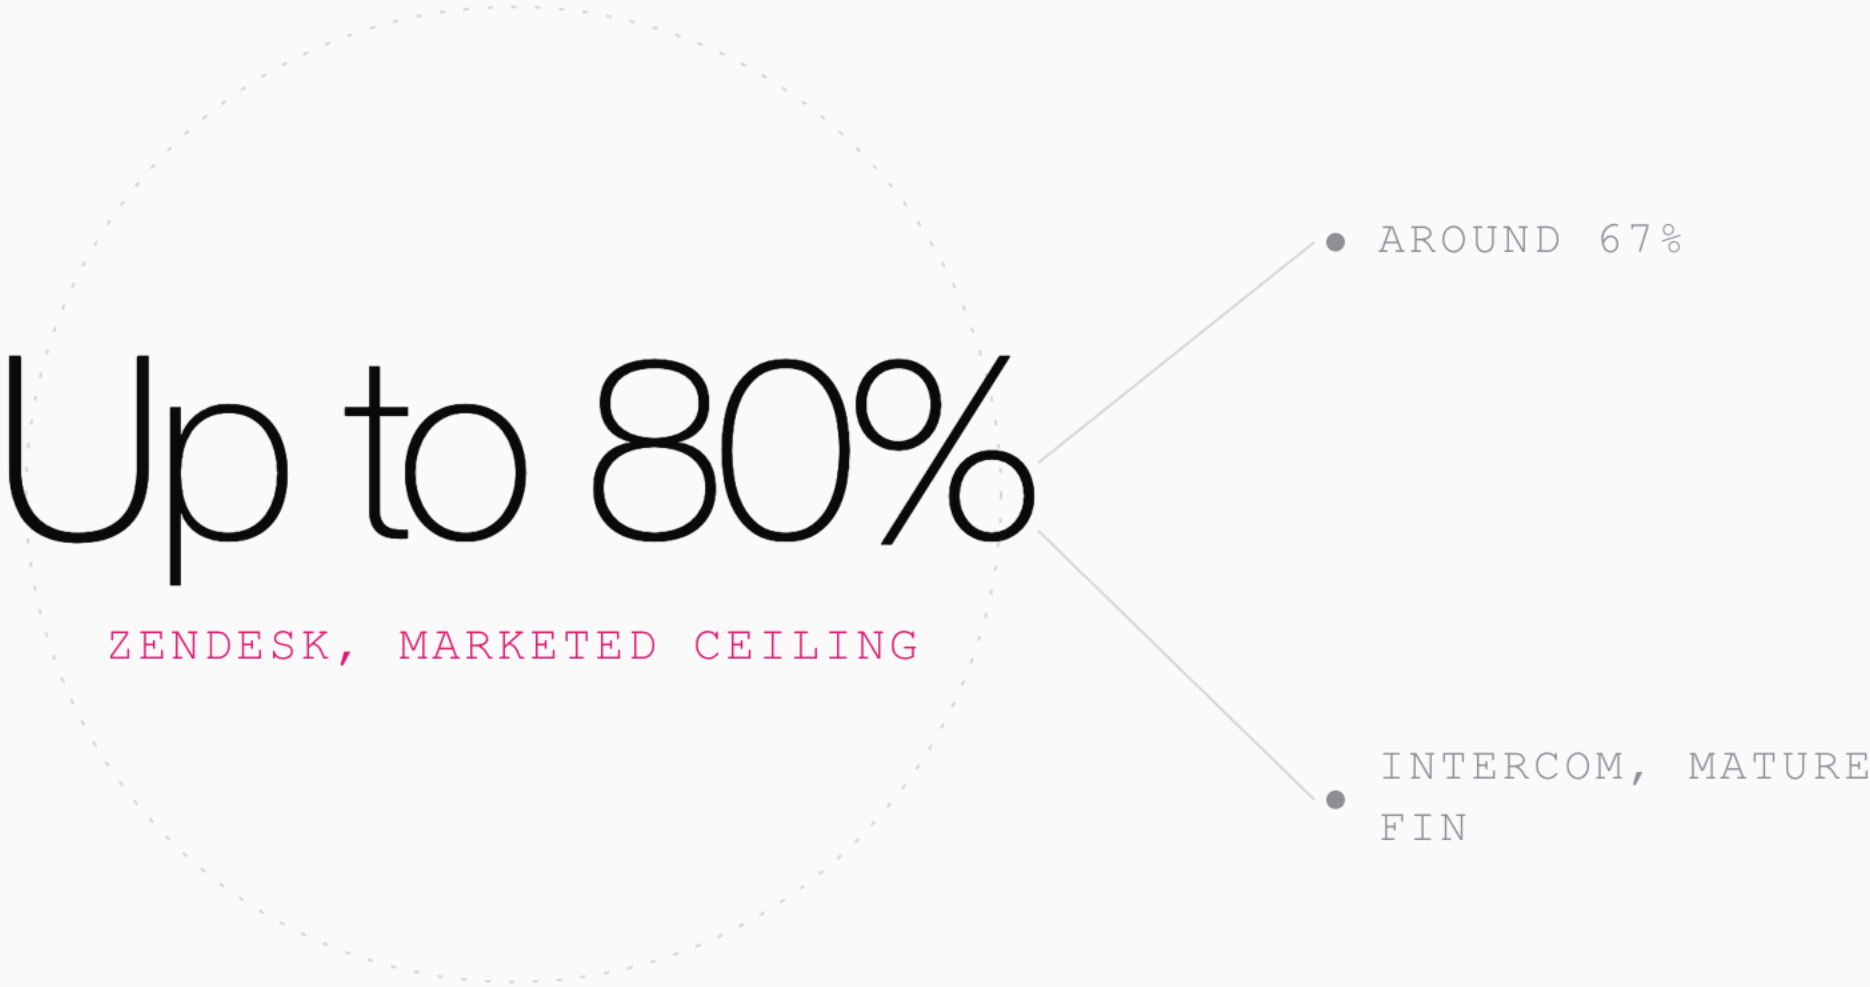

SWIPE 

VENDOR-REPORTED

02 / 06

# Read the Vendor Numbers as a Ceiling

Zendesk markets up to 80% autonomous resolution. Intercom reports around 67% on mature Fin deployments. Both are vendor figures under good conditions.

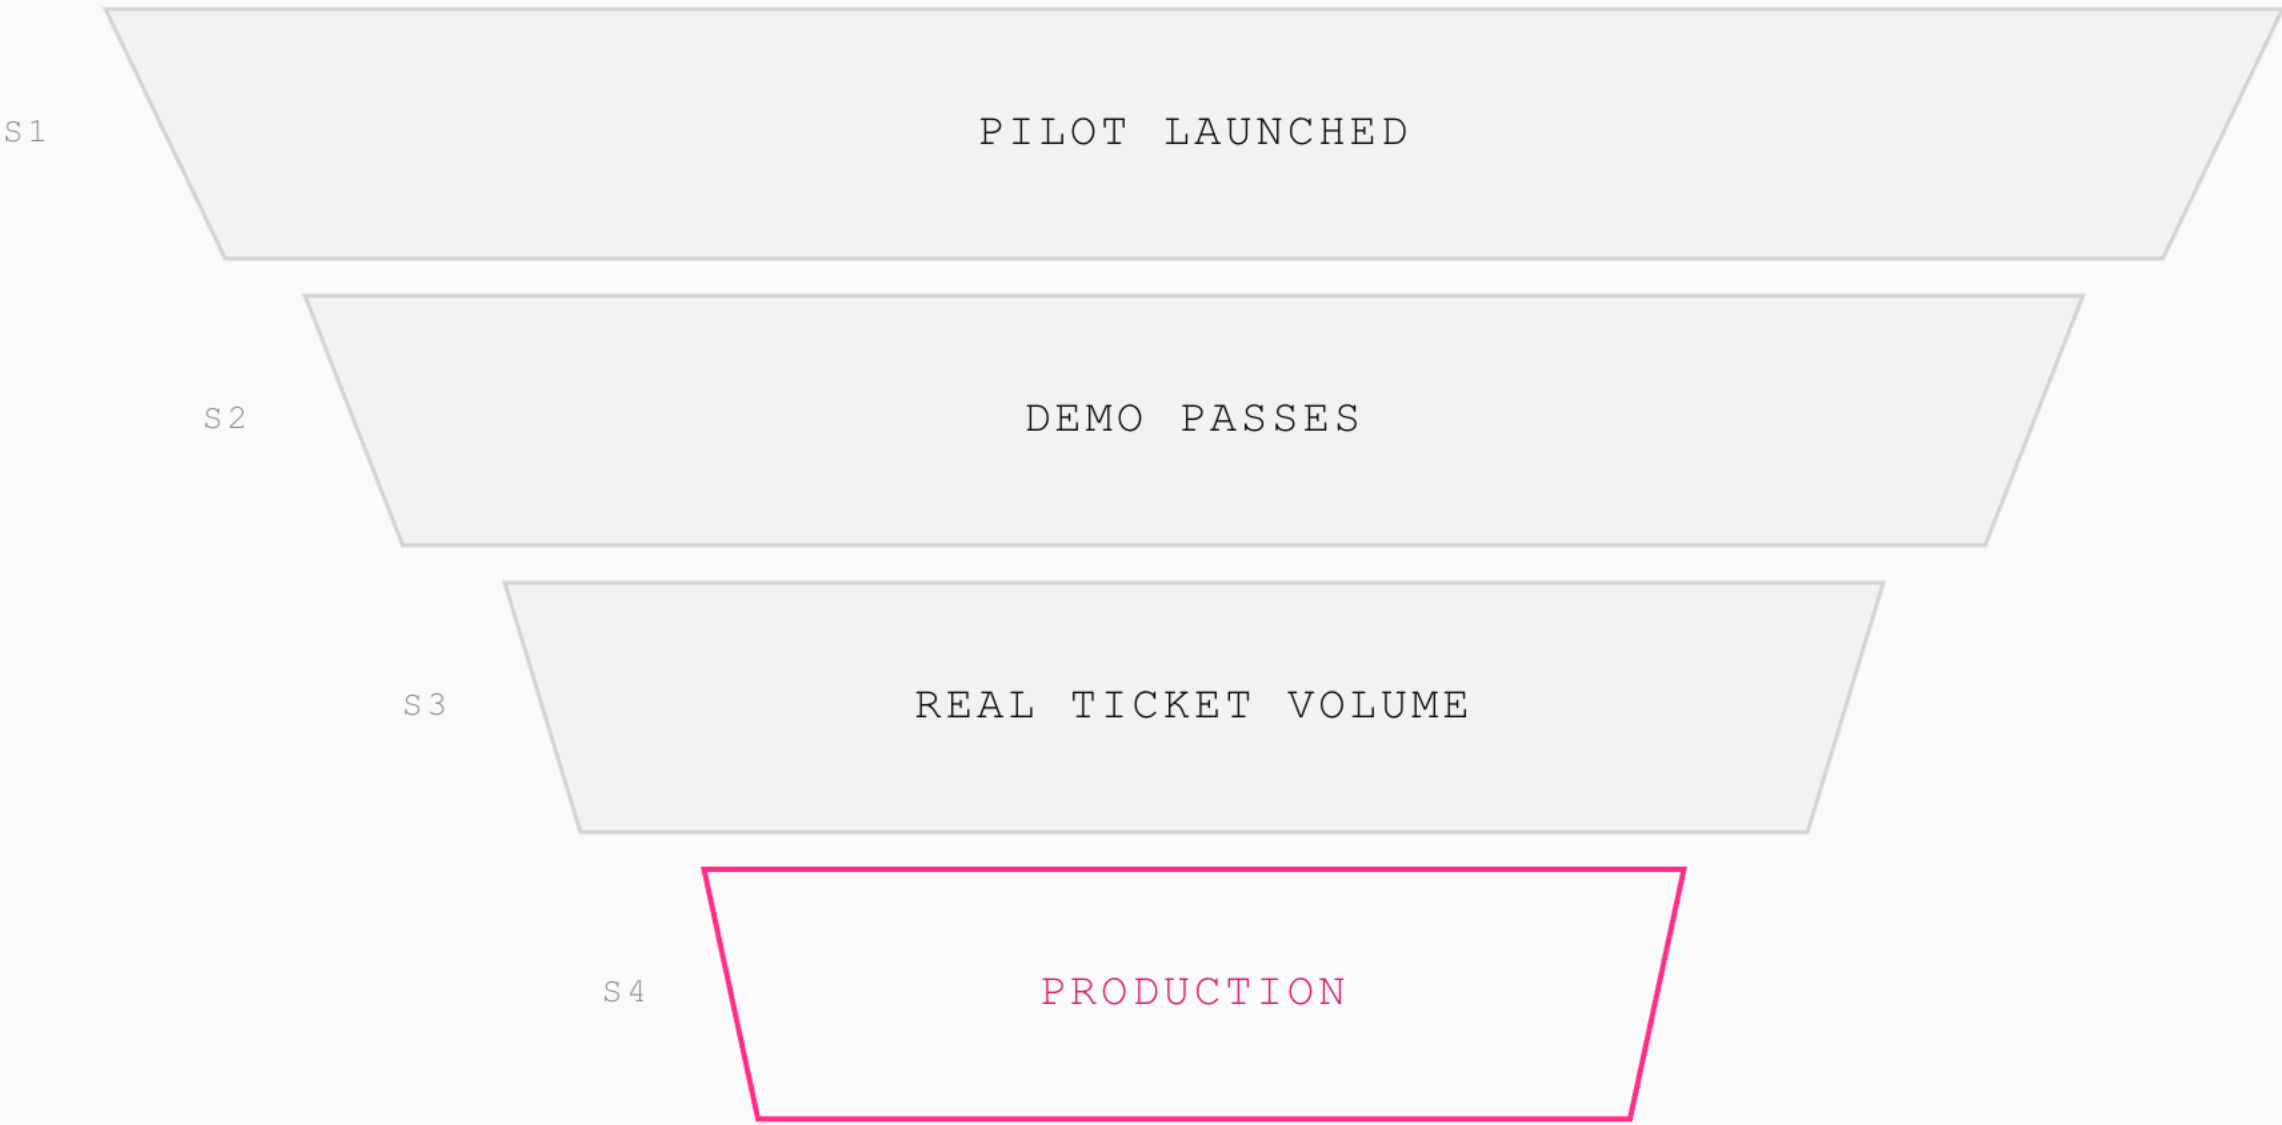

WIDELY CITED

03 / 06

# Most Pilots Never Reach Production

The 86 to 89% failure figure is widely cited, not independently audited.  
The pattern behind it holds up regardless.

# What I Check Before Anything Goes Live

Named owner assigned. Process worked before automation. Measured on real ticket volume. Escalation path already defined.

# Three Things Kill a Pilot Before Production

No named owner after launch. Bolted onto a process that was already broken. Reliability that was never measured before scaling.

# Ship the Checklist, Not the Demo

The gap between a pilot and production is three things you can check before launch.
