

MODEL UPGRADES

Anthropic says Sonnet 5.5 is faster. Faster doesn't verify.

In W39 my researcher agent put claims in its snippets that weren't in the sources. The fix was a rule, not a model.

SECTION 02 · SPEED VS TRUTH

Anthropic's claims versus my W39 snippets

Anthropic says Sonnet 5.5 generates output more than 30% faster than Sonnet 5 and can cut task cost by as much as 30%. Those are Anthropic's figures. My W39 problem was about truth, not speed.

FIG. 2

ANTHROPIC SAYS

- OUTPUT 30%+ FASTER
- UP TO 30% CHEAPER

VS

MY W39 SNIPPETS

- TWO UNSOURCED STATS
- ONE REVERSED CLAIM

SECTION 03 · THE RULE

The fix was a rule, not a better model

One snippet claimed GPT-6 Astra became Codex's recommended model. The source says the opposite. So the rule: re-fetch every source, list verifiedClaims, delete anything unconfirmed.

FIG. 3

SECTION 04 · THE EVIDENCE

One week later, every figure held up

In W40, after the rule, every figure checked out on independent refetch.
That's one week's result, not a guarantee.

SECTION 05 · FORM, VOICE, TRUTH

Three gates, three different jobs

The validator checks form: em dashes, banned phrases, visual specs.
The editor checks voice. Neither verifies that a claim is true. Only the
refetch does.

Add the refetch gate before the upgrade

Faster output still needs a check on what it says.
