CHECKABLE CLAIMS

Forrester says buyers' AI tools already fact-check provider claims

It also predicts two-thirds of providers will lose deals because buyers cannot verify claims. A prediction, not a survey result.

SWIPE

02 · the buyer loop

Tools check claims now. Forrester predicts humans validate.

The release says buyers already use AI-assisted tools to gather information, synthesize provider claims and fact check. It predicts buyers will double their human interactions to validate the recommendations.

03 · forrester prediction

Forrester predicts two-thirds of providers will lose deals

Because buyers cannot verify claims. A prediction, not survey data. The release headline also says AI agents will influence 75% of B2B purchase decisions, but the release body doesn't define it.

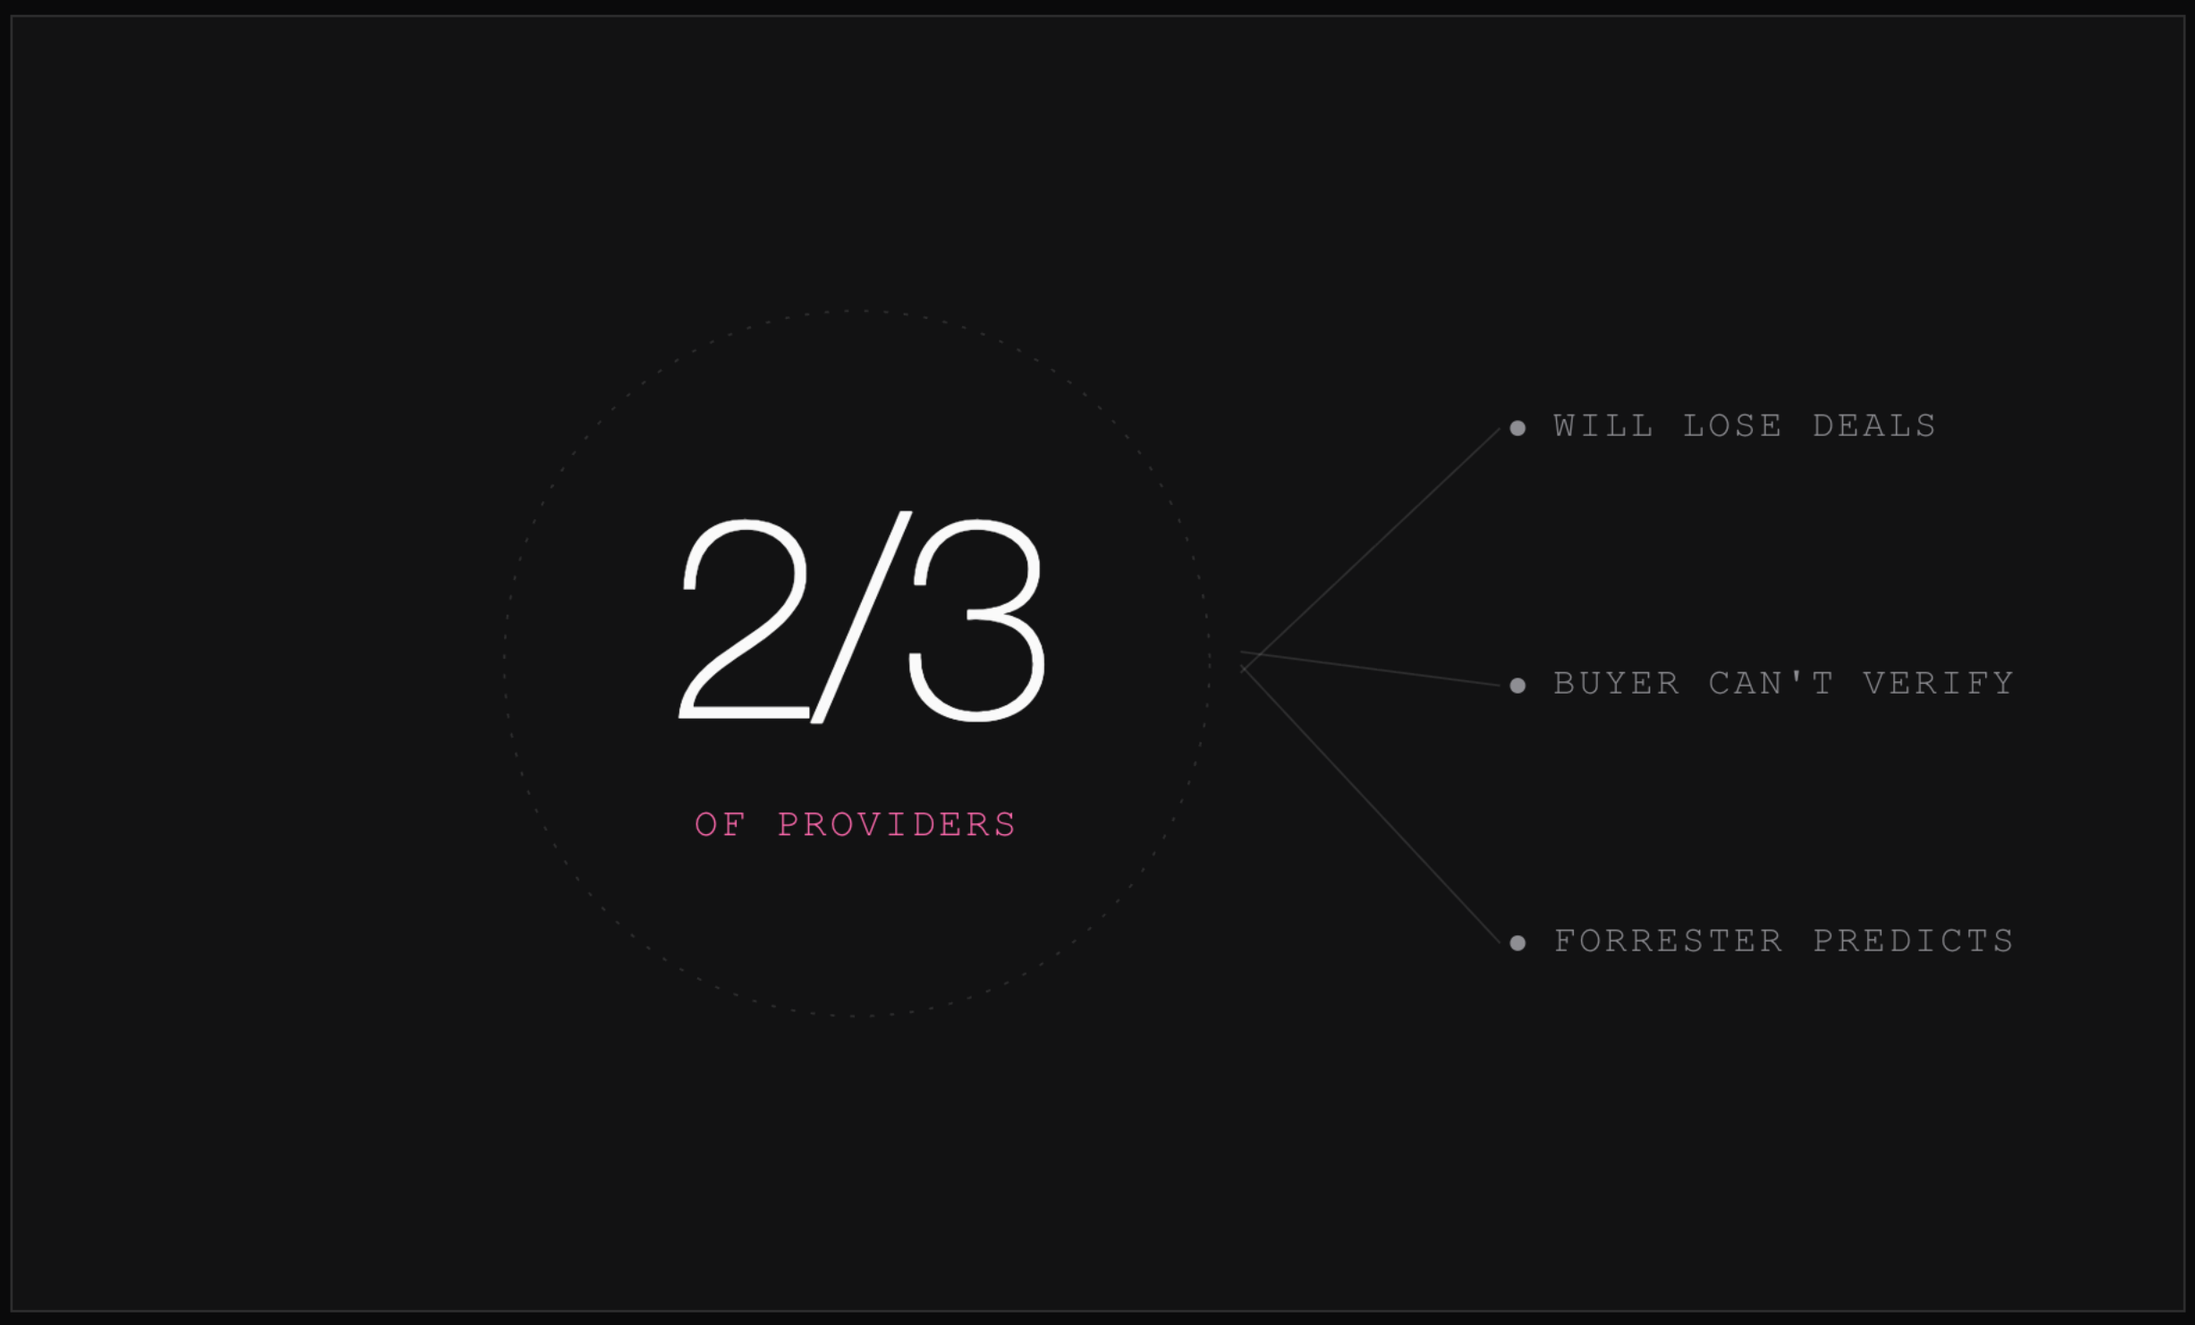

FIG. 3 · VERYDIAN

04 · my verifier

Form and voice get checked. Truth needs its own step.

In my pipeline the validator checks form and the editor checks voice. Neither checks truth. So every load-bearing stat is fetched and matched against its source page before a post publishes.

05 · my opinion

My view: a checkable claim carries four things

My opinion, not Forrester's: a number, a source, a date, and a human who can stand behind it when the buyer asks for the conversation.

☑ A NUMBER	PASS
☑ A SOURCE	PASS
☑ A DATE	PASS
☑ A NAMED OWNER	LIVE

FIG. 5 · VERYDIAN

Give your best claim a source and a date

If a buyer's tool can't find the proof, the claim is decoration.
