ORGANIC ADOPTION

Anthropic's S-1: Claude is often in use before sales engages

The filing says much of Claude's spread has been organic, led by individual users who become internal champions. It also names the assumption behind that.

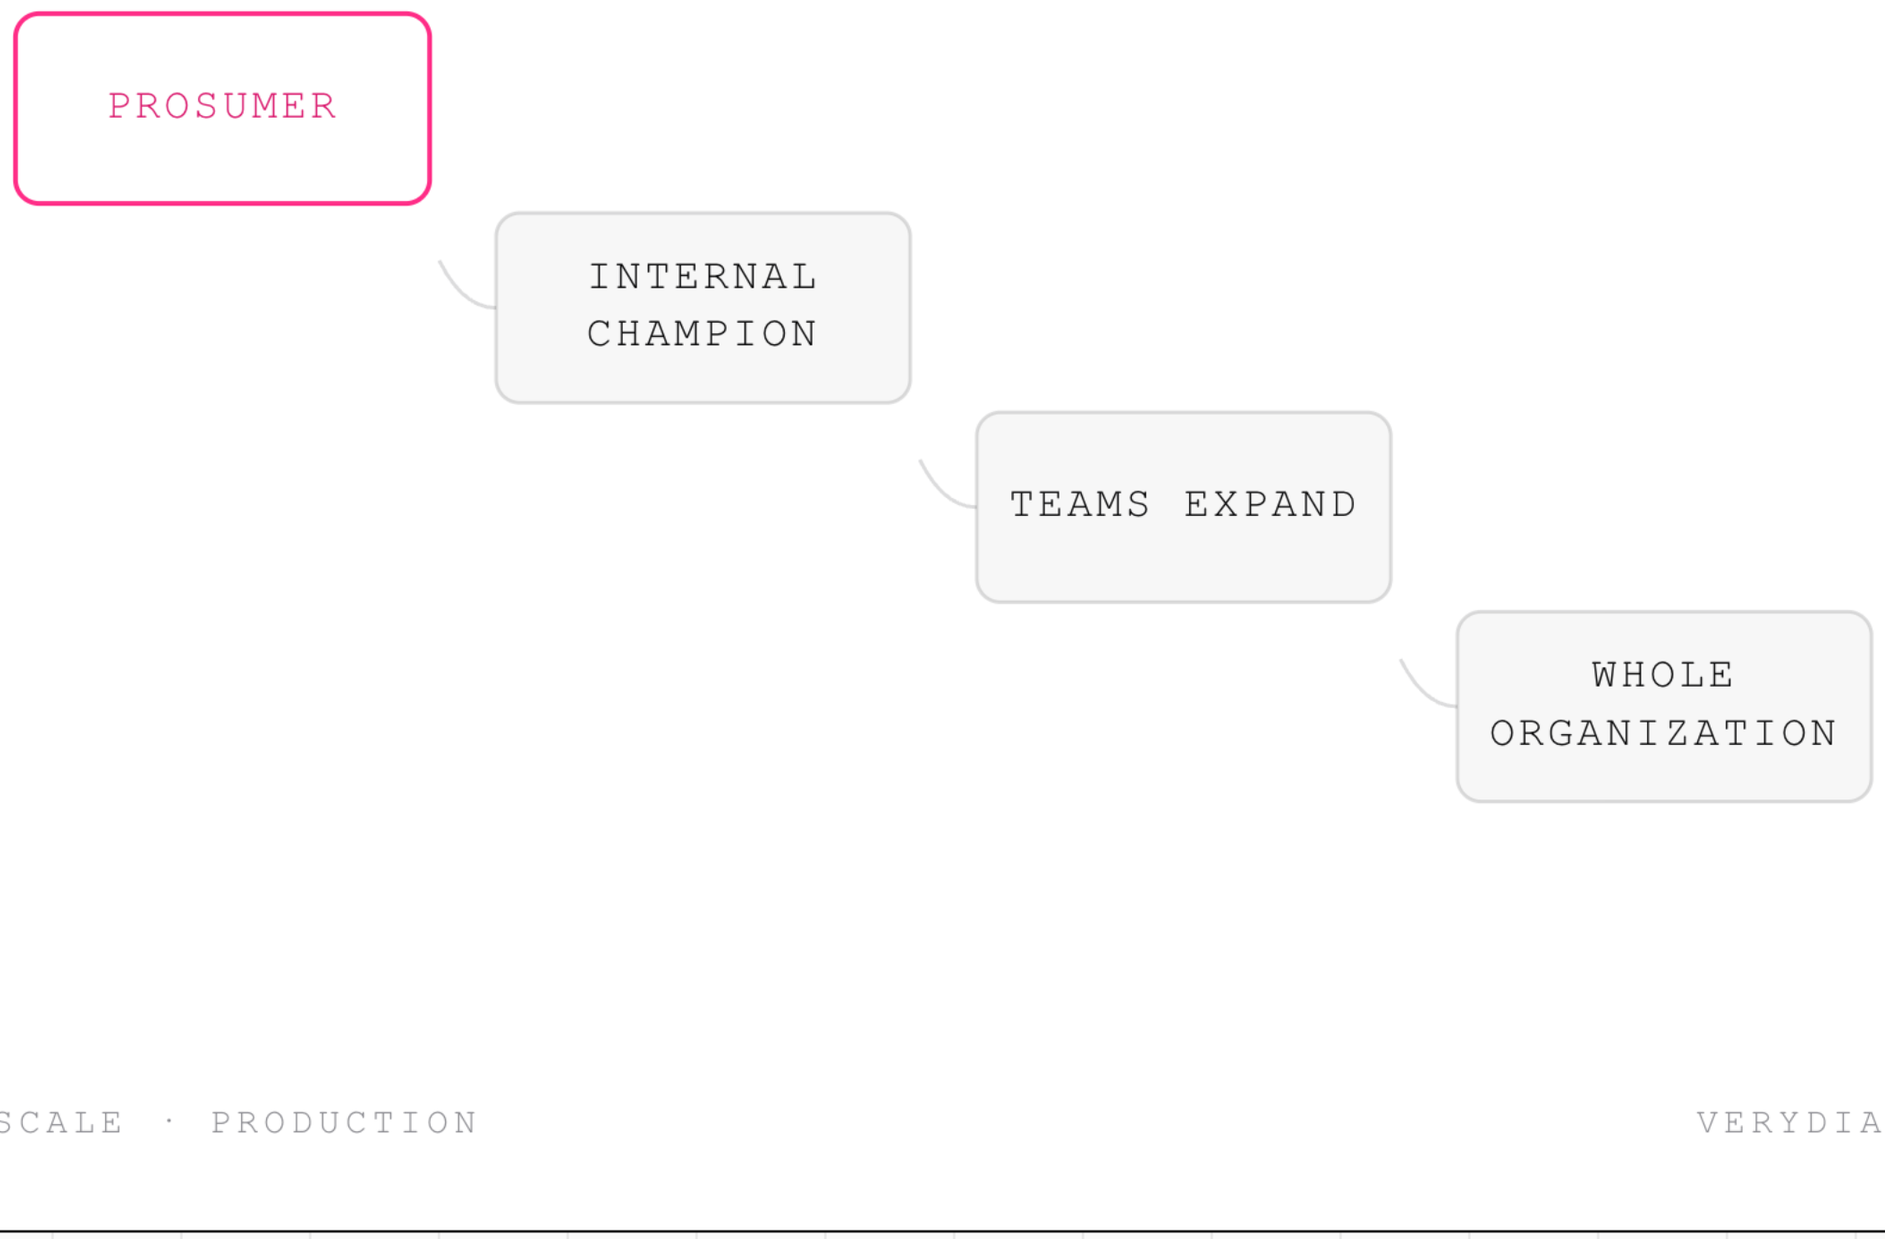

UNROLL THE DRAWING

SECTION 02 · THE PATTERN

The S-1's own adoption pattern: user, champion, team, organization

In the filing's words, prosumers become internal champions, teams expand their use of Claude, and what begins as a single workflow grows into something that impacts how an entire organization operates.

VERYDIAN

SECTION 03 · THE COUNTERWEIGHT

The same filing keeps its direct sales force

It says it has grown, and will continue to grow, its direct sales force, and that organic adoption is complemented by direct teams. So this is not a story about having no sales team.

FIG. 3

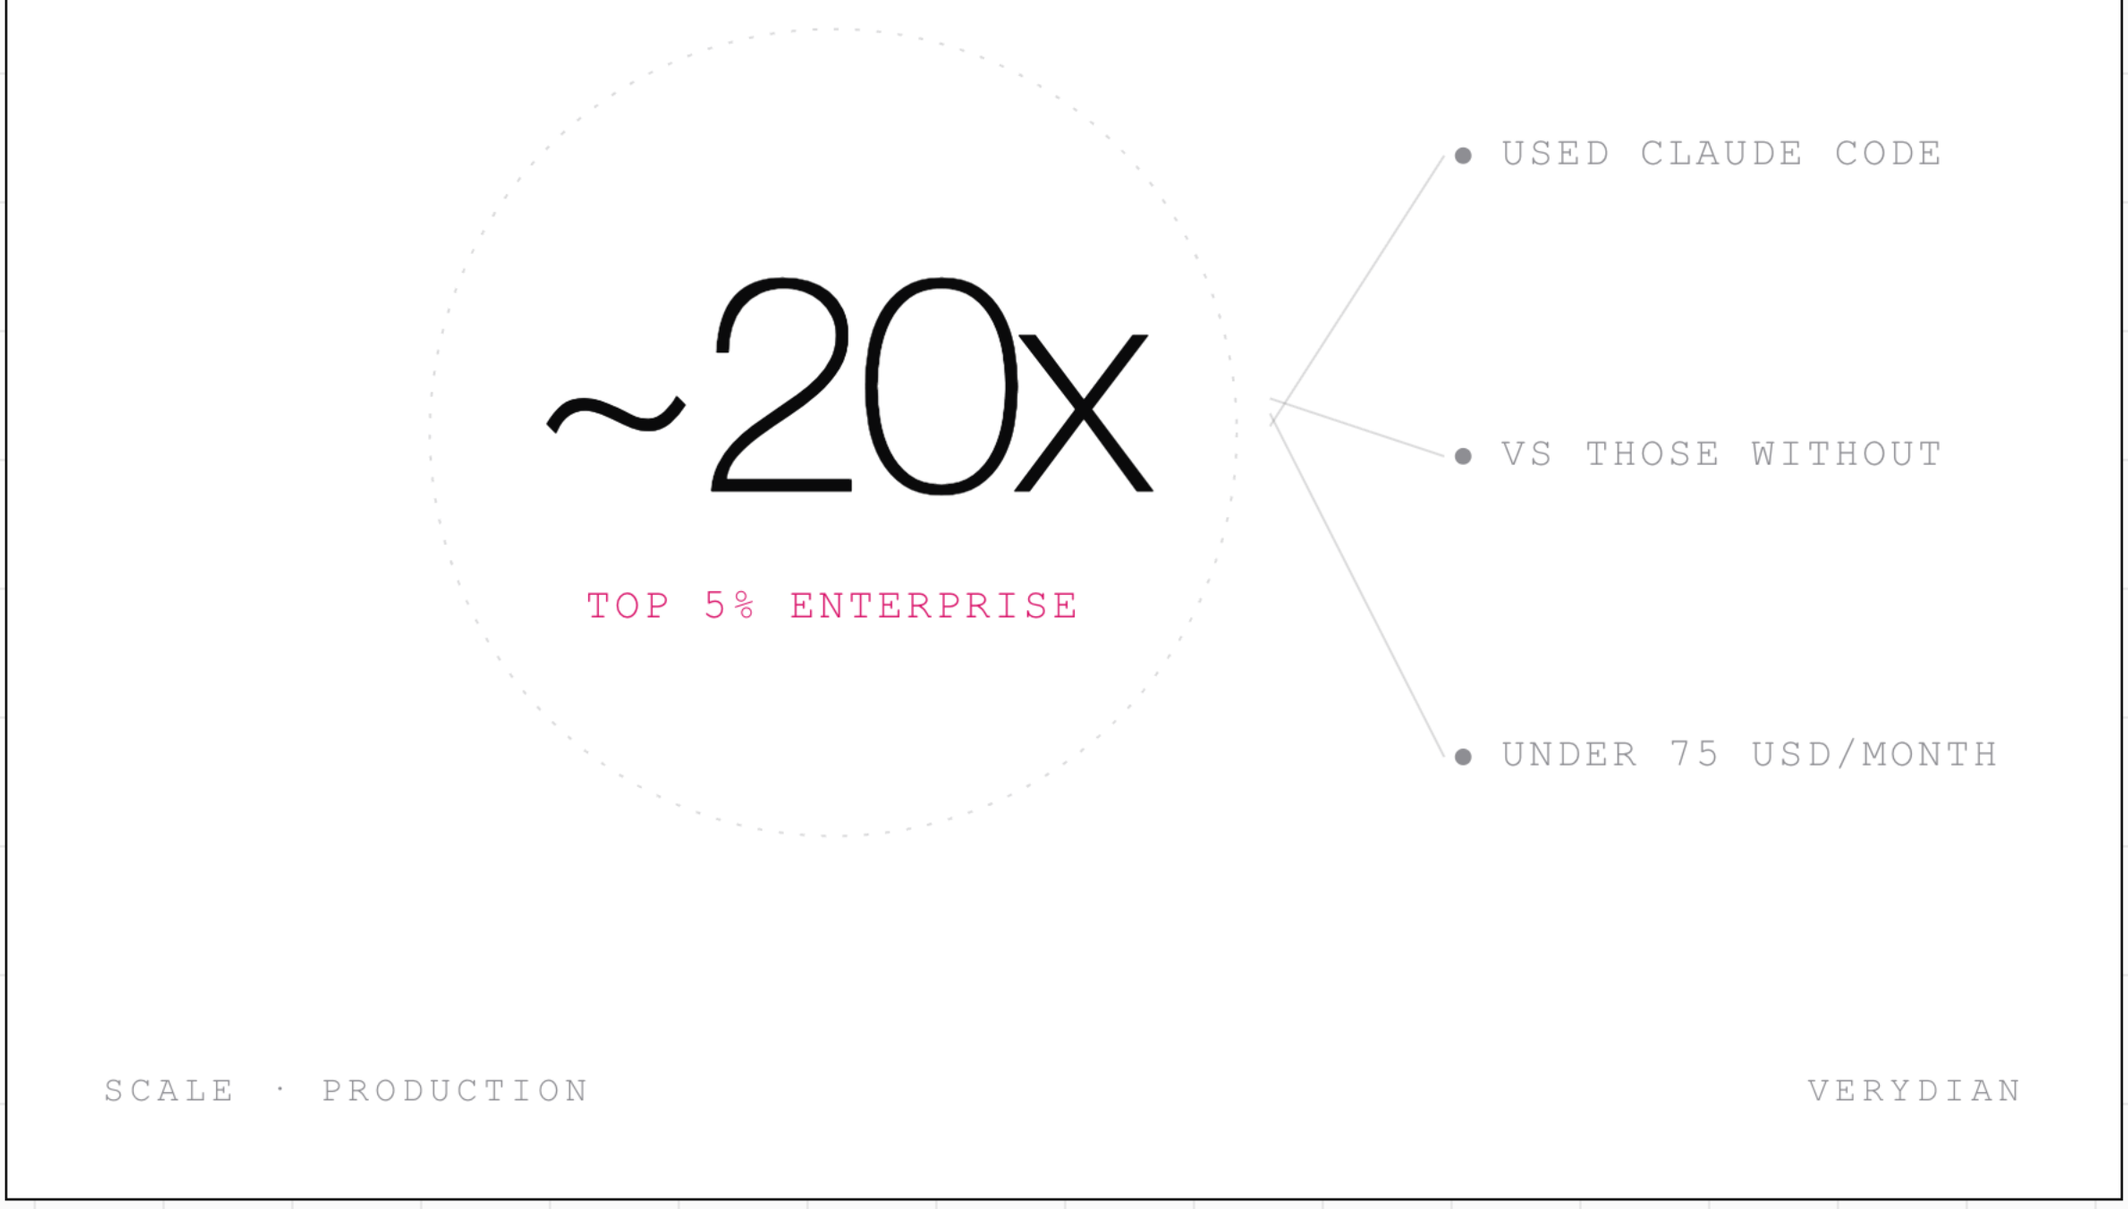

DRIVES ADOPTION	VS	COMPLEMENTS IT
— INDIVIDUAL USERS		• DIRECT SALES TEAMS
— INTERNAL CHAMPIONS		• GROWING SALES FORCE

SECTION 04 · THE S-1 COMPARISON

Two Enterprise groups sit about 20x apart in monthly spend

Three months to September 30, 2026: Enterprise users without Claude Code averaged under 75 USD a month. The top 5% who used it spent about 20 times that. A comparison, not proof of cause.

FIG. 4

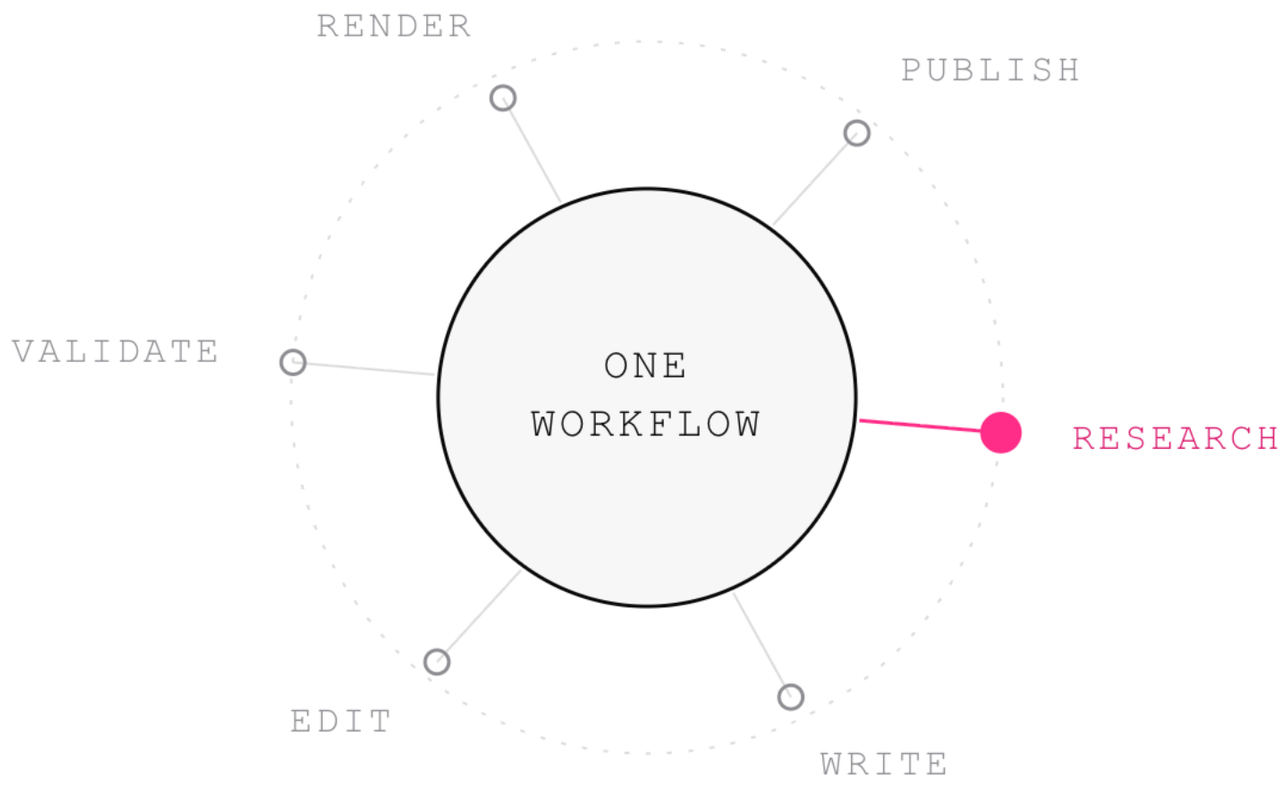

SECTION 05 · MY VIEW

One workflow, grown stage by stage

My opinion, not Anthropic's: the unit of AI adoption inside a company is one person's workflow. This content pipeline is a small example. It grew a stage at a time.

FIG. 5

SCALE · PRODUCTION

VERYDIAN

Lead with one workflow, not a platform

Outbound corollary: give the buyer one process they could try this week.
