

/DESIGN RESEARCH PREVIEW

I Let Claude Code Draft My Carousels

The new /design research preview drafted my layout options.
Here's what it got right, and where I overrode it.

SWIPE

The Test: Verydian's Own Brand Constraints

Monochrome first, obsidian and crisp white carry the slide. Signal pink is a scarce accent, never the whole layout.

☒	MONOCHROME FIRST	PASS
☒	OBSIDIAN + CRISP WHITE	PASS
☒	PINK, SCARCE ACCENT ONLY	PASS
☒	LOGO NEVER PINK	LIVE

FIG. 2 · VERYDIAN

03 · what it nailed

It Got The Monochrome Instinct Right

No instinct to fill slides with color the way most generative design tools default to. That part needed zero correction.

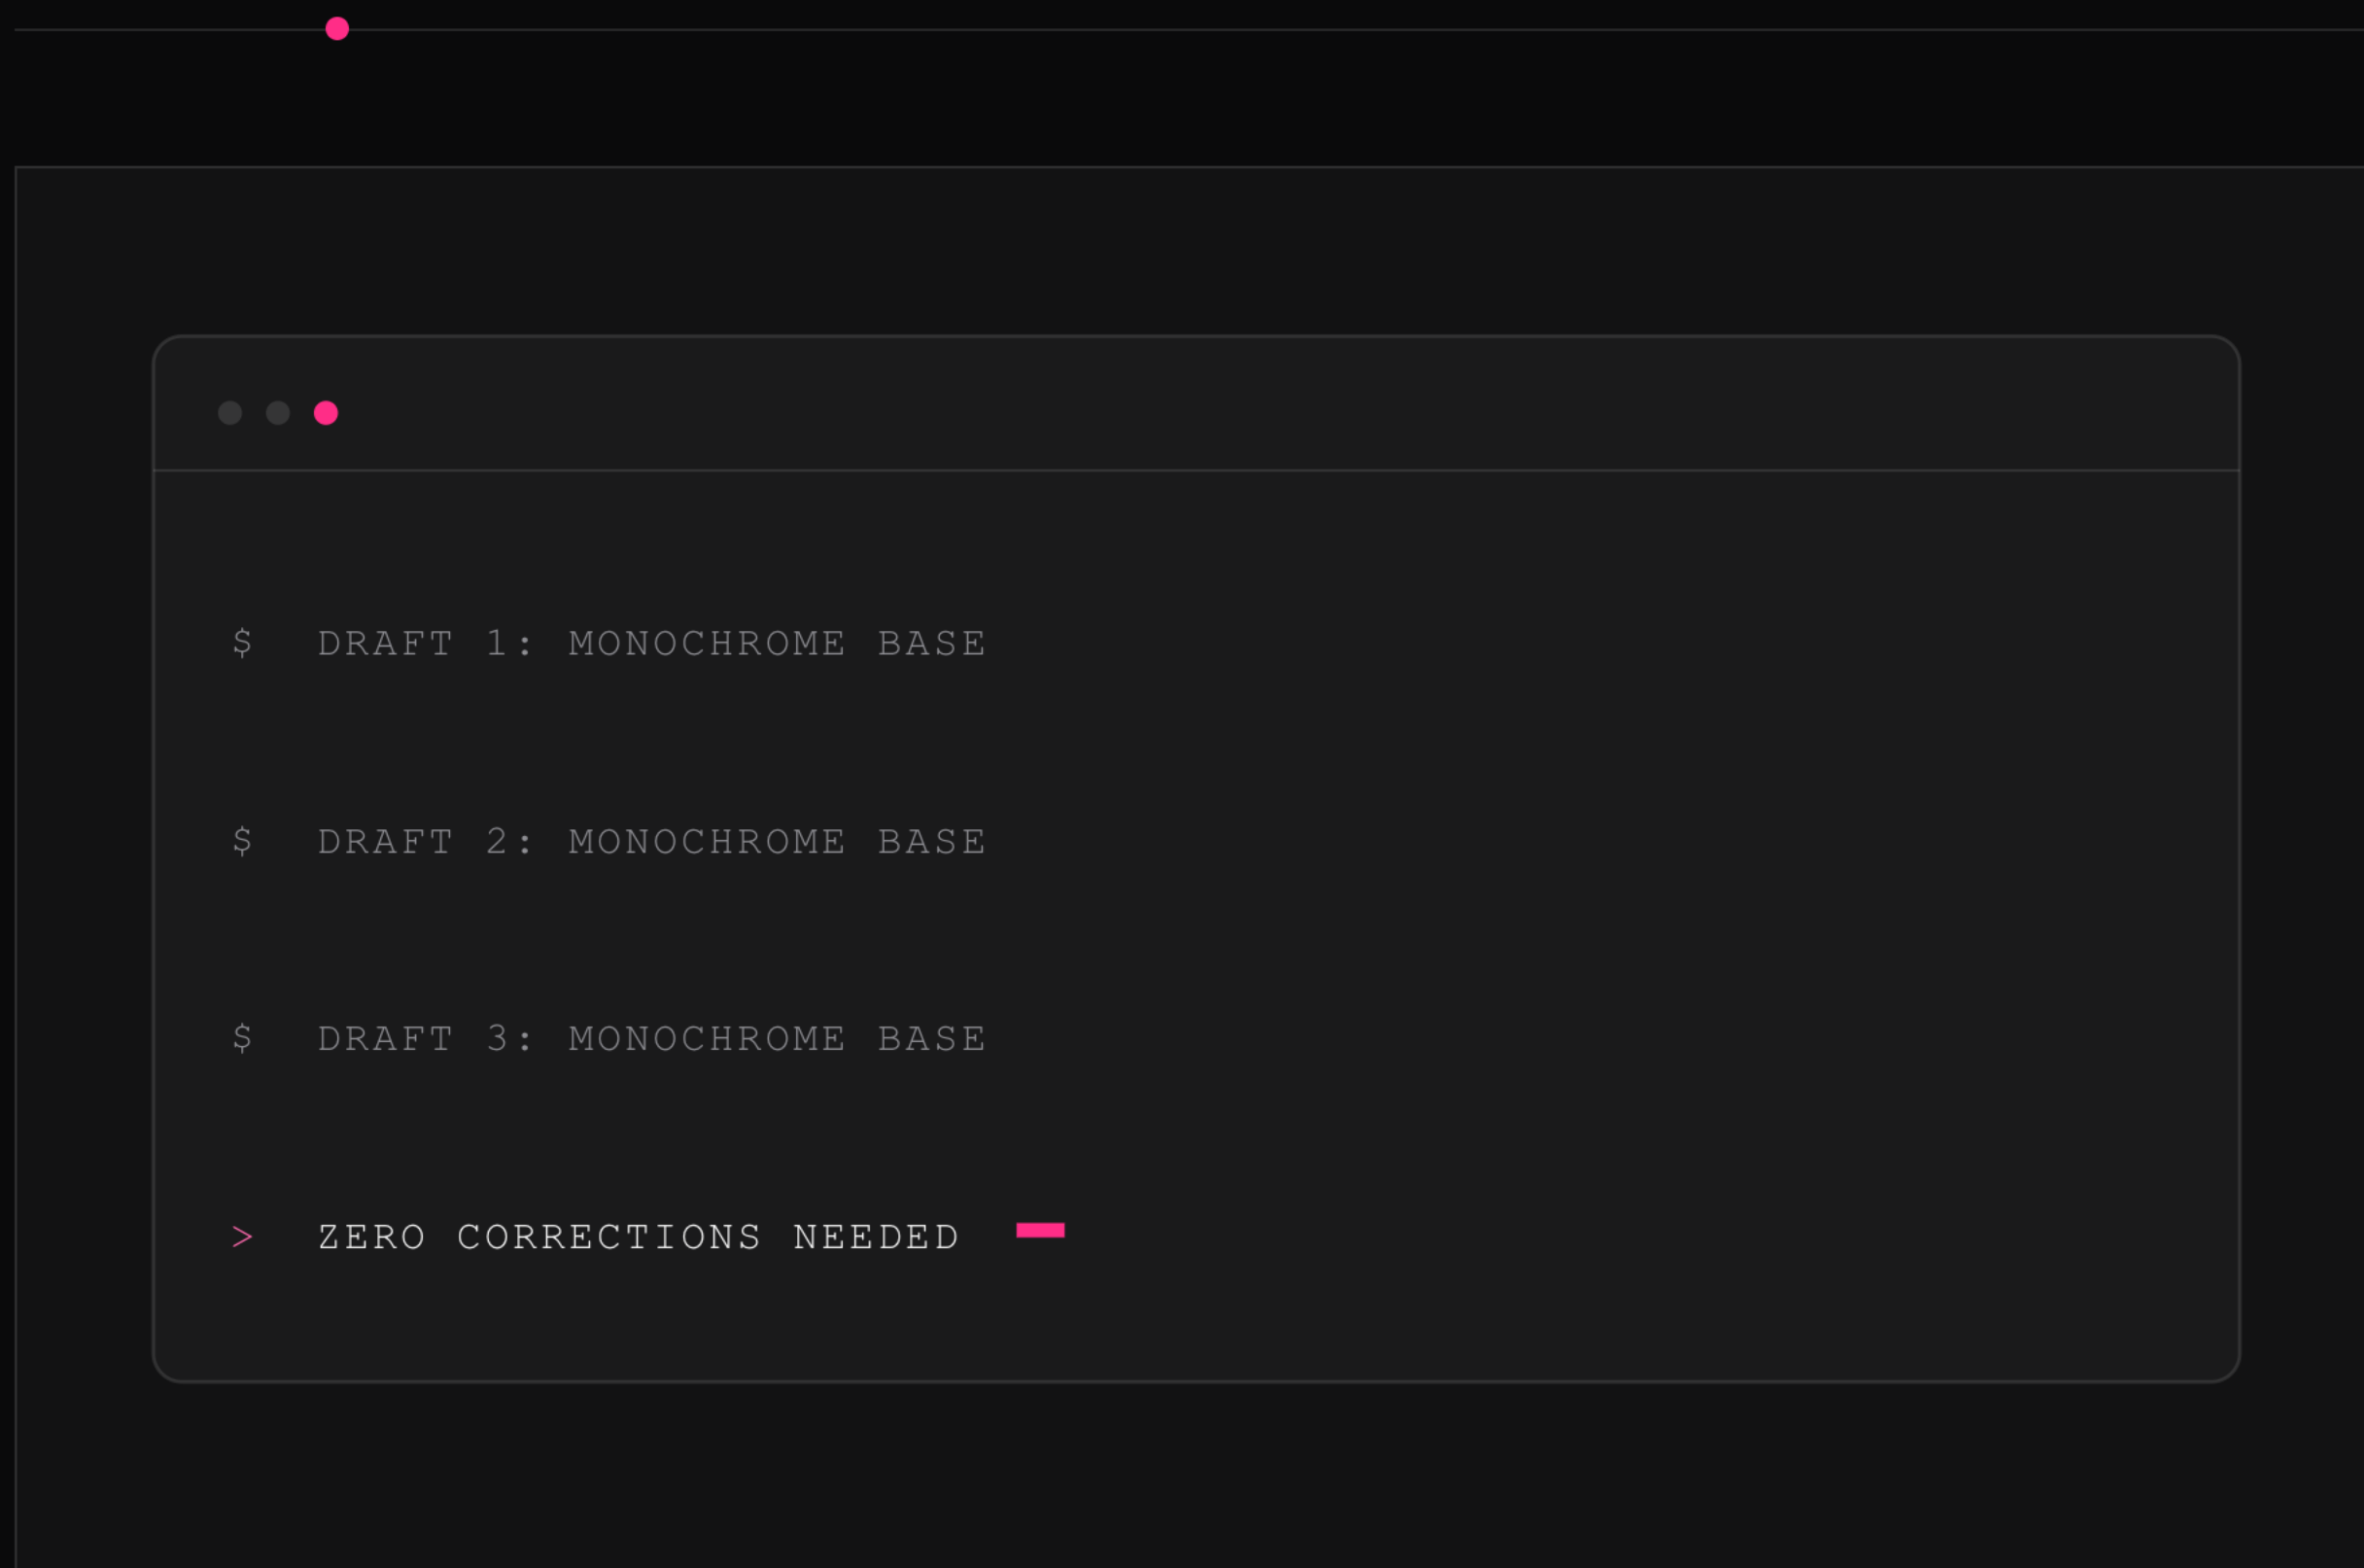

FIG. 3 · VERYDIAN

04 · the pink rule

Where I Overrode Every Draft

It scattered pink across a headline word, a border, an accent tick, instead of spending it once per diagram.

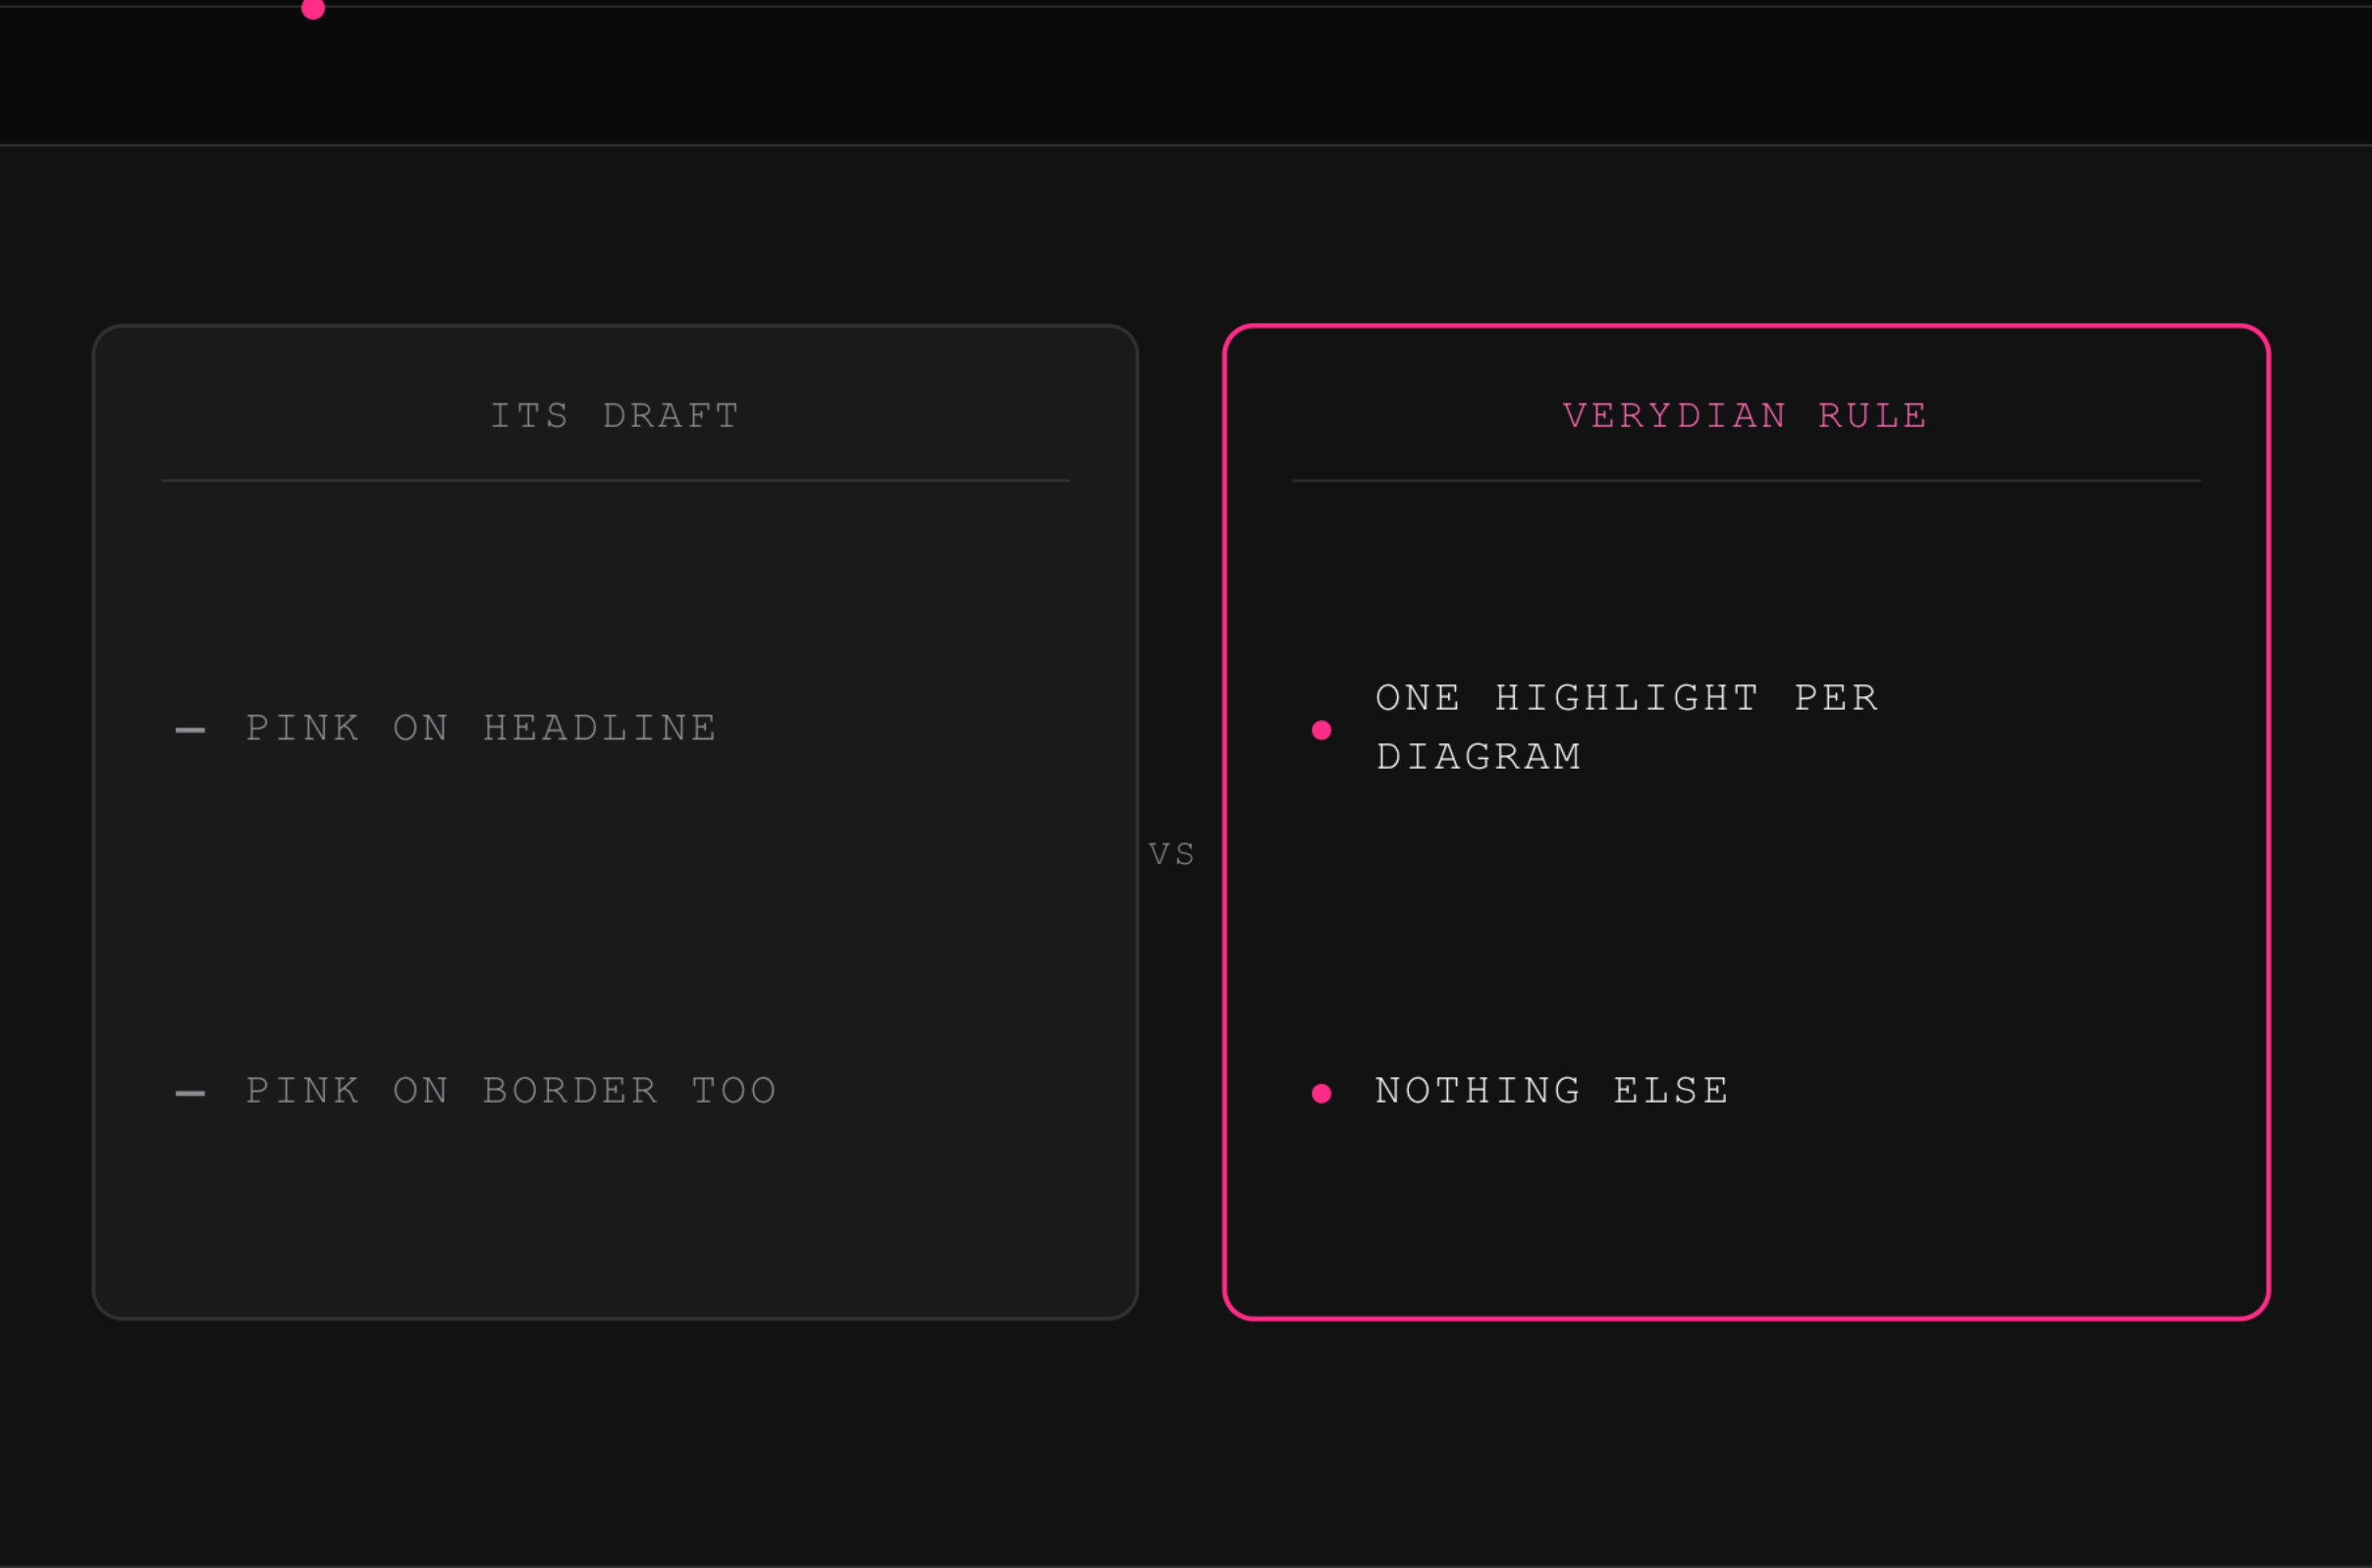

FIG. 4 · VERYDIAN

05 · codex, enterprise wide

Coding Agents Already Left The Dev Team

Codex runs production work at Ramp for code review and at Virgin Atlantic, alongside named enterprise customers like Notion, Cisco, and Rakuten.

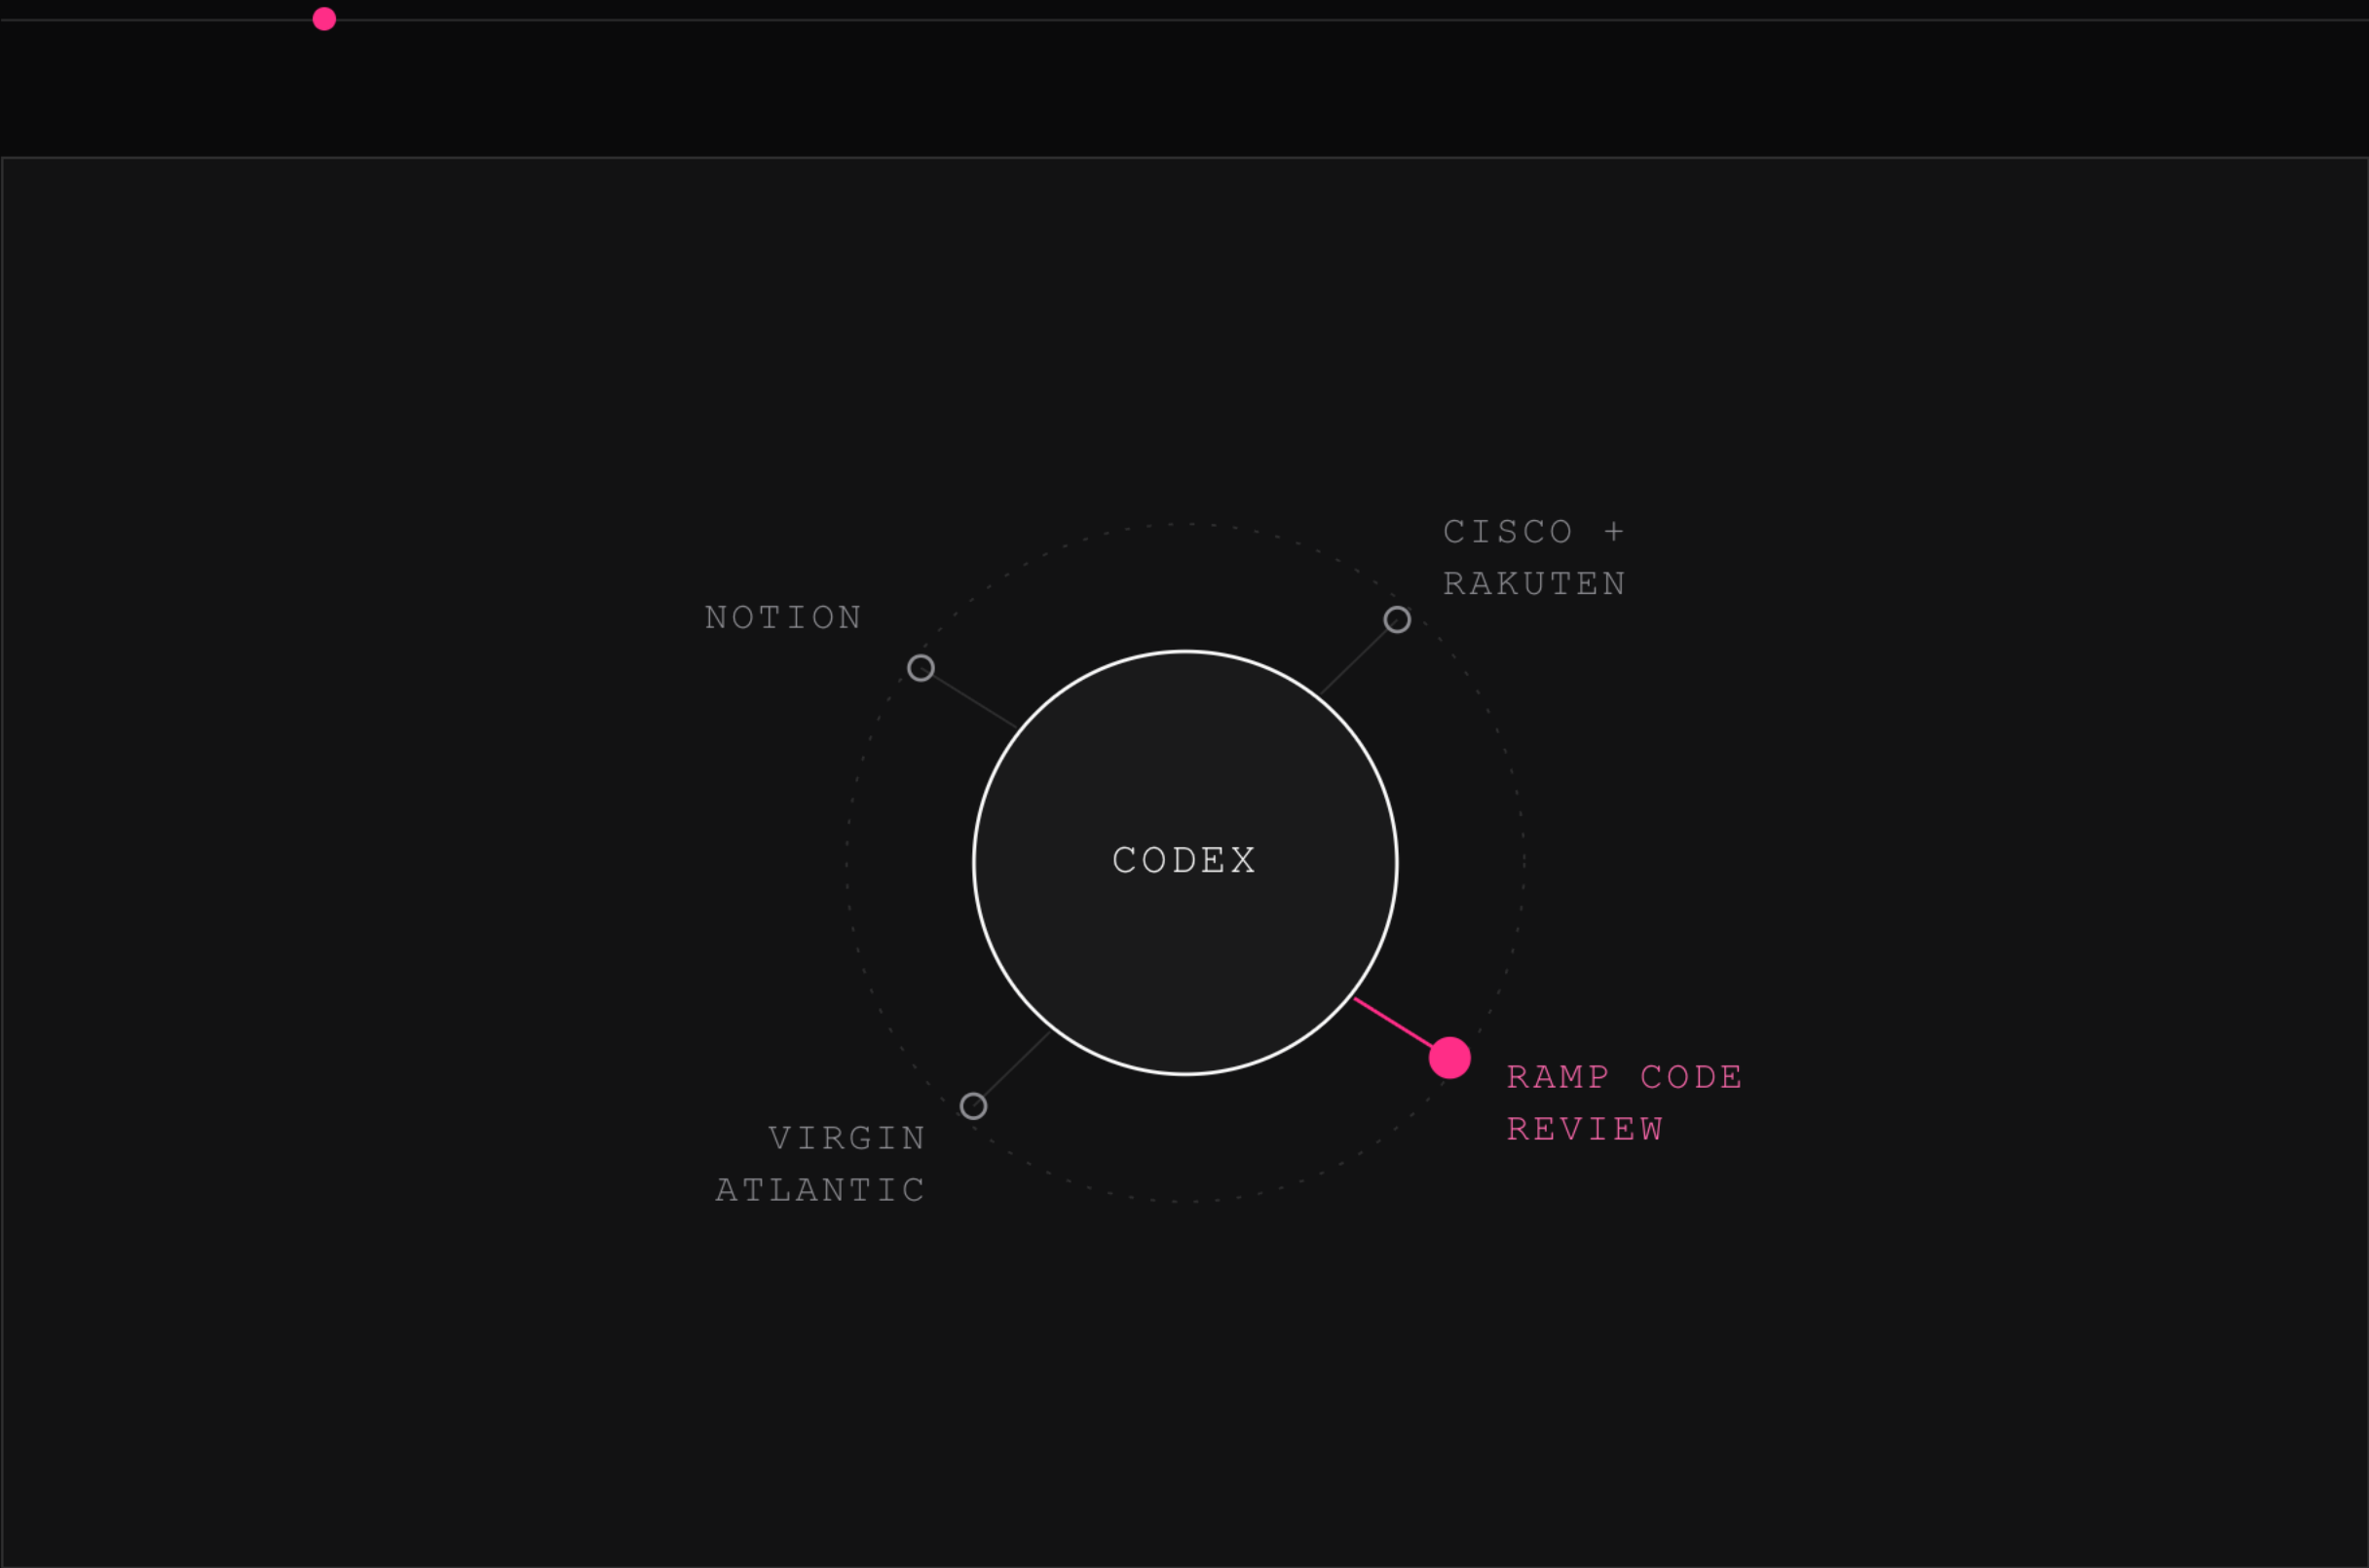

FIG. 5 · VERYDIAN

Speed Without The Brand Getting Lost

Five iterations against a real constraint beats one hand-built
draft.
