My AI caller can't say 'removed' until the database agrees _

A voice agent that promises an opt-out has to be right about it. So the sentence is unreachable without proof.

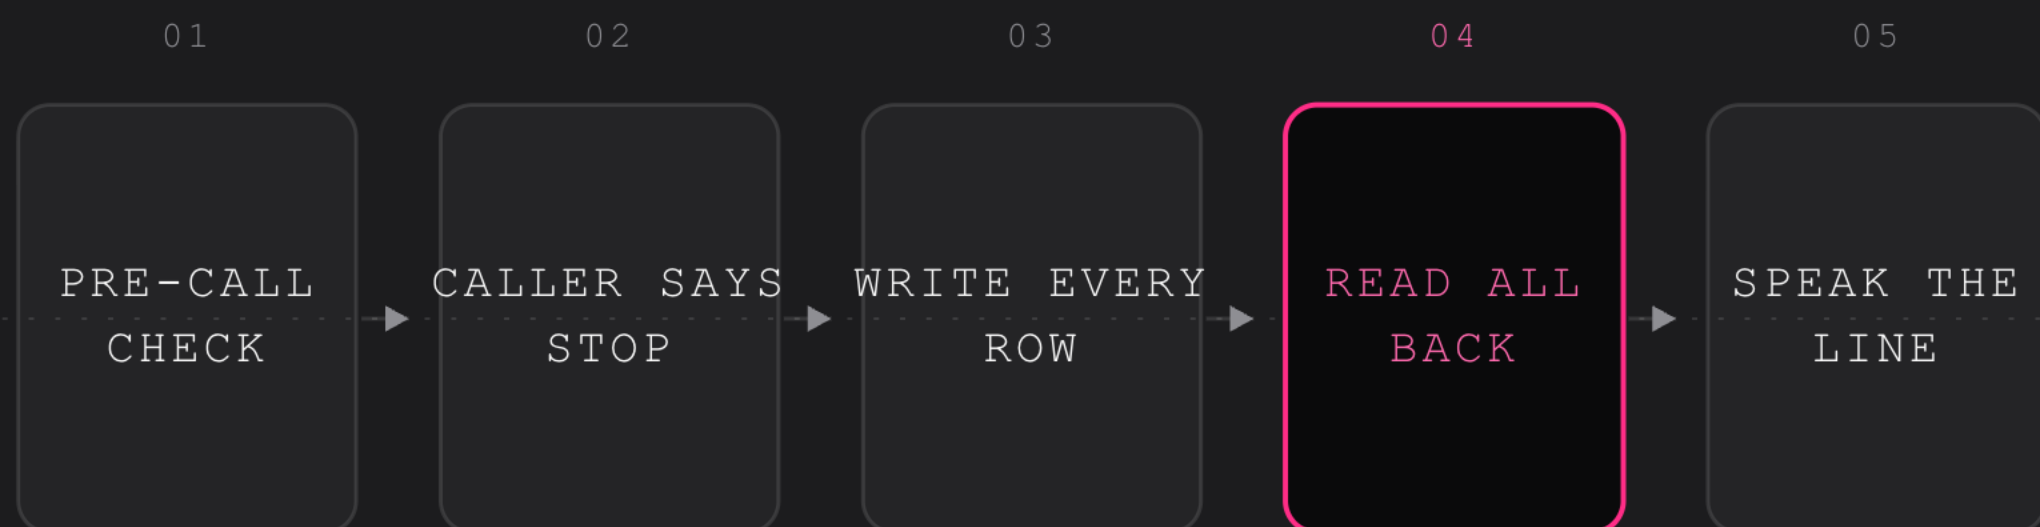

RUN SESSION _

```
arhem@verydian:~/the sequence$ step 2
```

The line fires last, after a proven write

The caller says stop. The DNC action sets every row sharing the normalized phone to do_not_call, then reads all matching rows back. Only then does the agent speak.

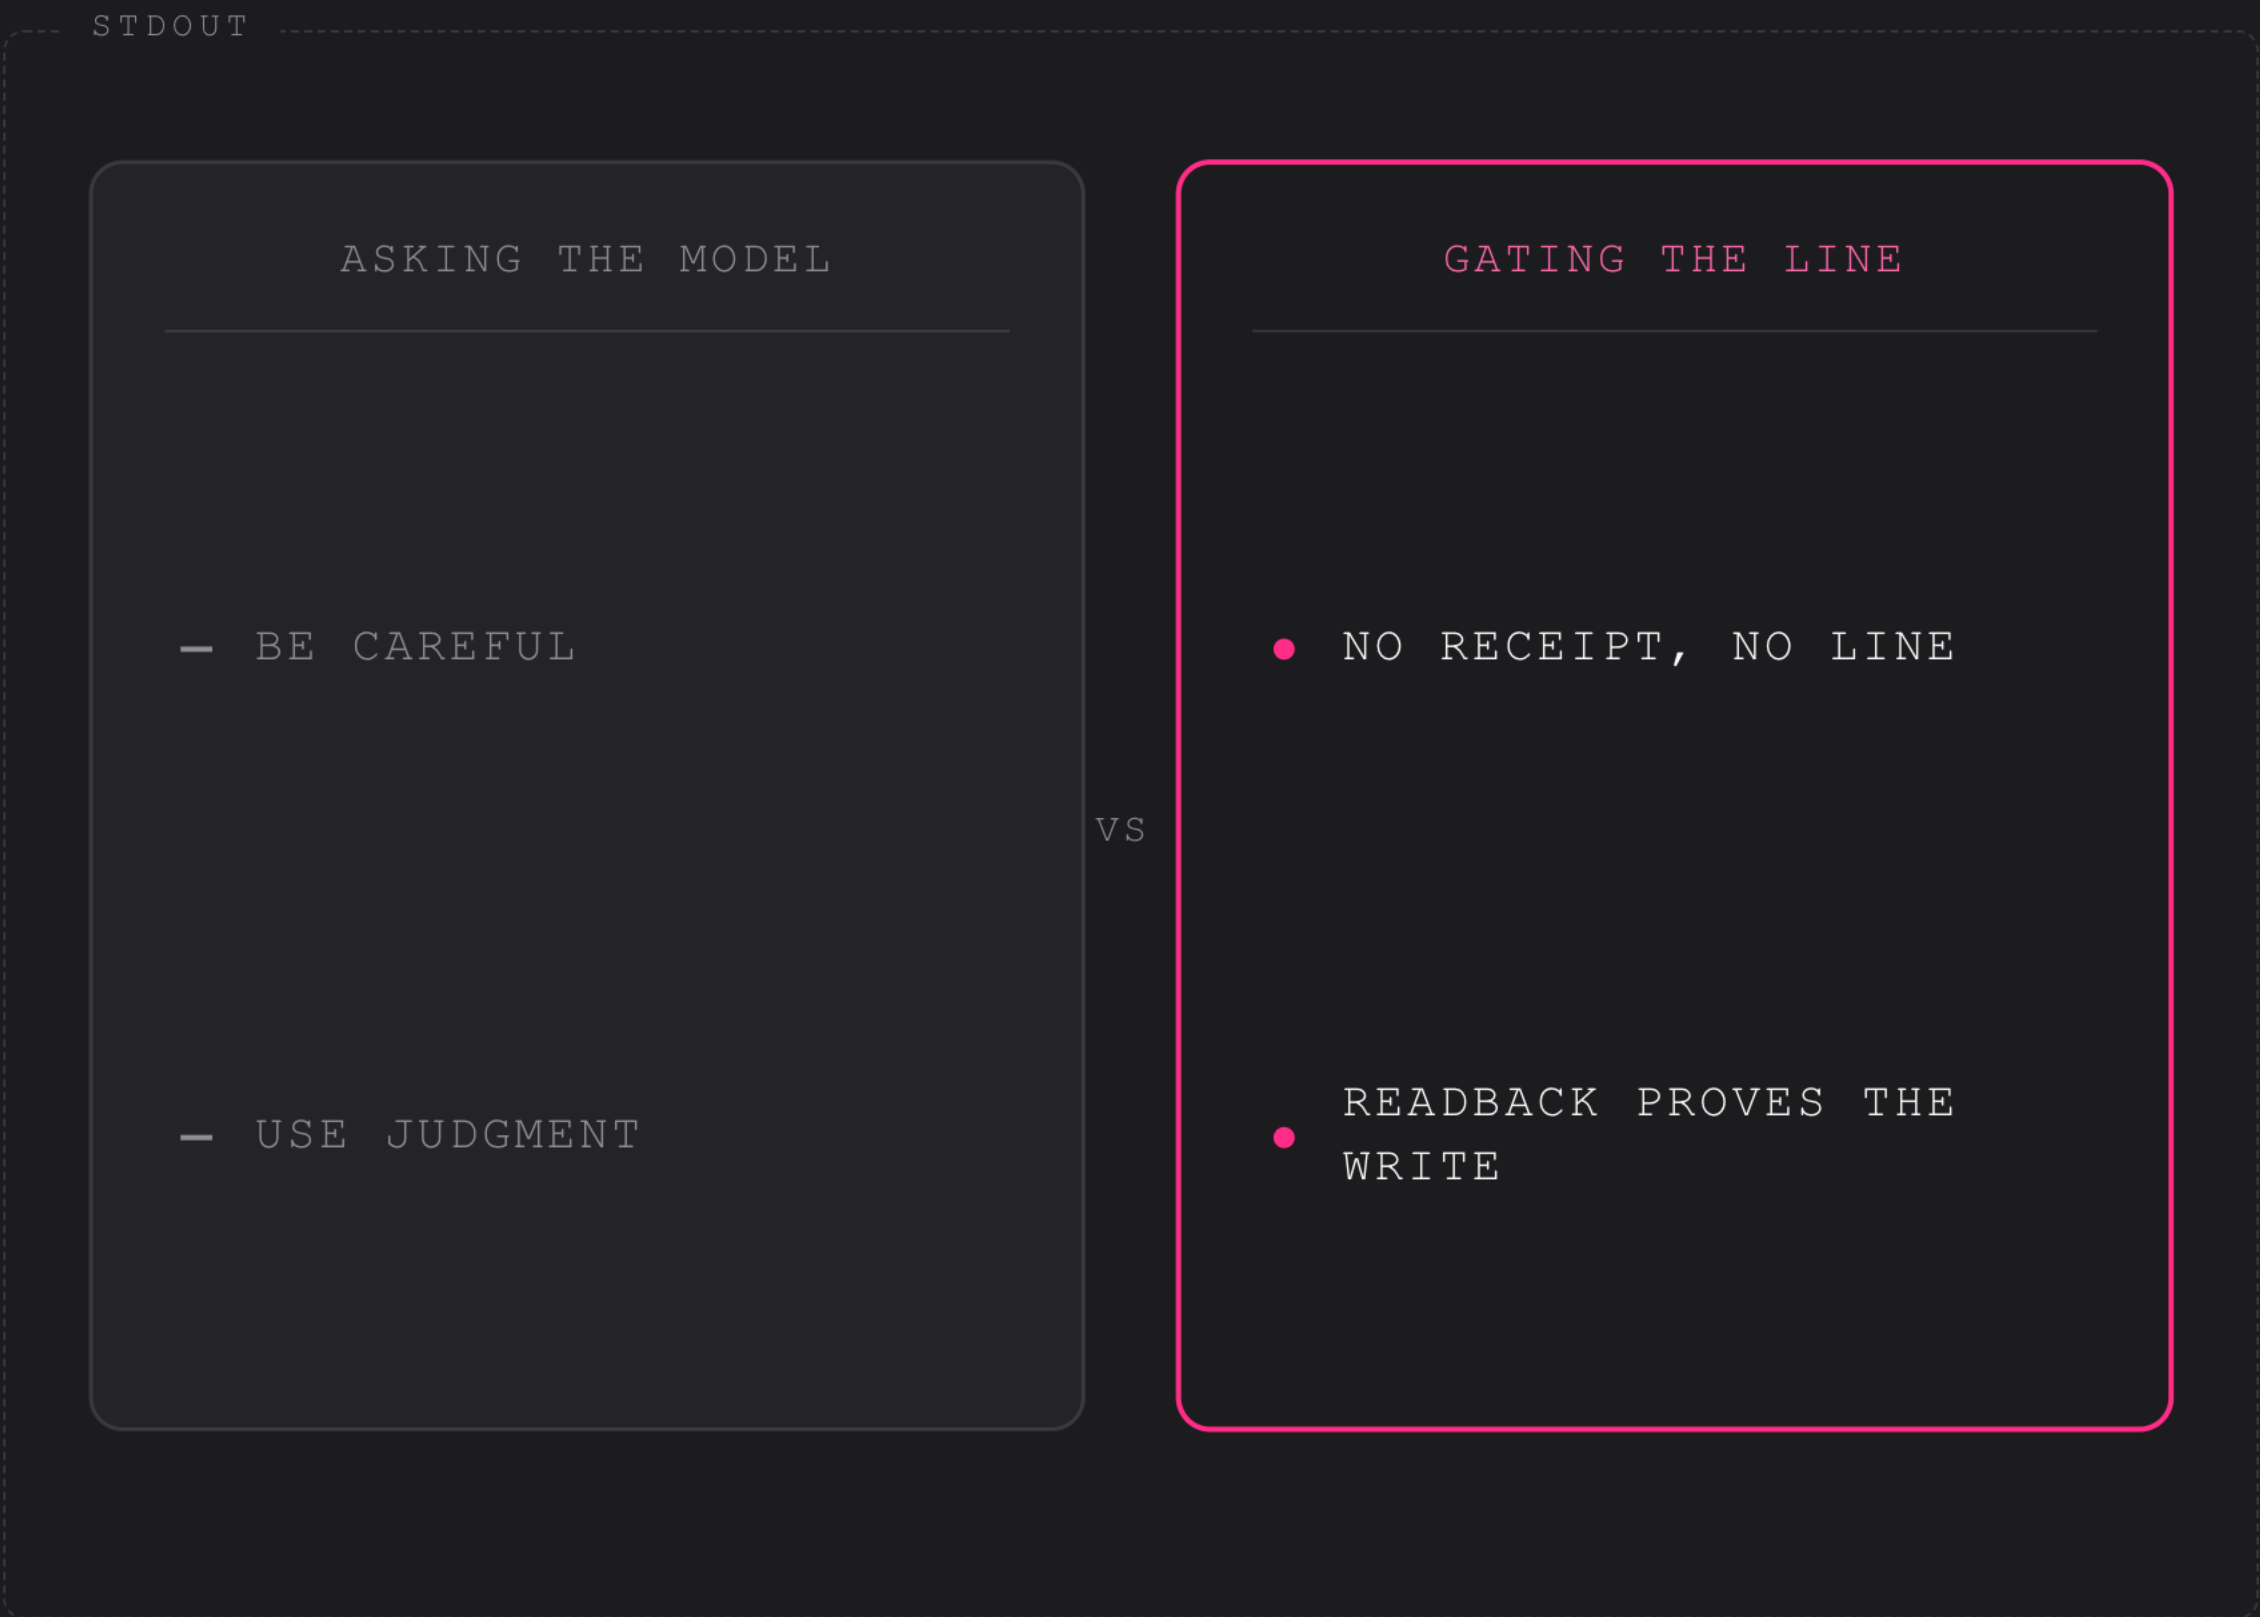

STDOUT

```
arhem@verydian:~/asked vs gated$ step 3
```

Asking the model to be careful isn't a control

A prompt asks. A gate refuses. The spoken line stays unreachable unless a durable, matched receipt exists.

```
arhem@verydian:~/three conditions$ step 4
```

Fail closed on any mismatch

HTTP 200 alone doesn't authorize the spoken confirmation. Canonical call metadata is identity, and conversation text can't override it.

STDOUT

IDENTITY MATCHES CALL METADATA

PASS

WRITE IS DURABLE

PASS

READBACK MATCHES EVERY ROW

LIVE

```
arhem@verydian:~/pre-call route$ step 5
```

Five seconds, then the permission is gone

The pre-call route blocks if any duplicate phone row is DNC. Its allow receipt is valid for five seconds, then it's gone.

```
arhem@verydian:~/honest status$ step 6
```

Built and tested. Live calls still pending.

Six of six tests passed at the last logged run and the CRM routes are verified. Live-call verification is pending. Known gap: concurrent cross-instance callback retries can both claim the first acknowledgement.
