

MEMORY TRADEOFF

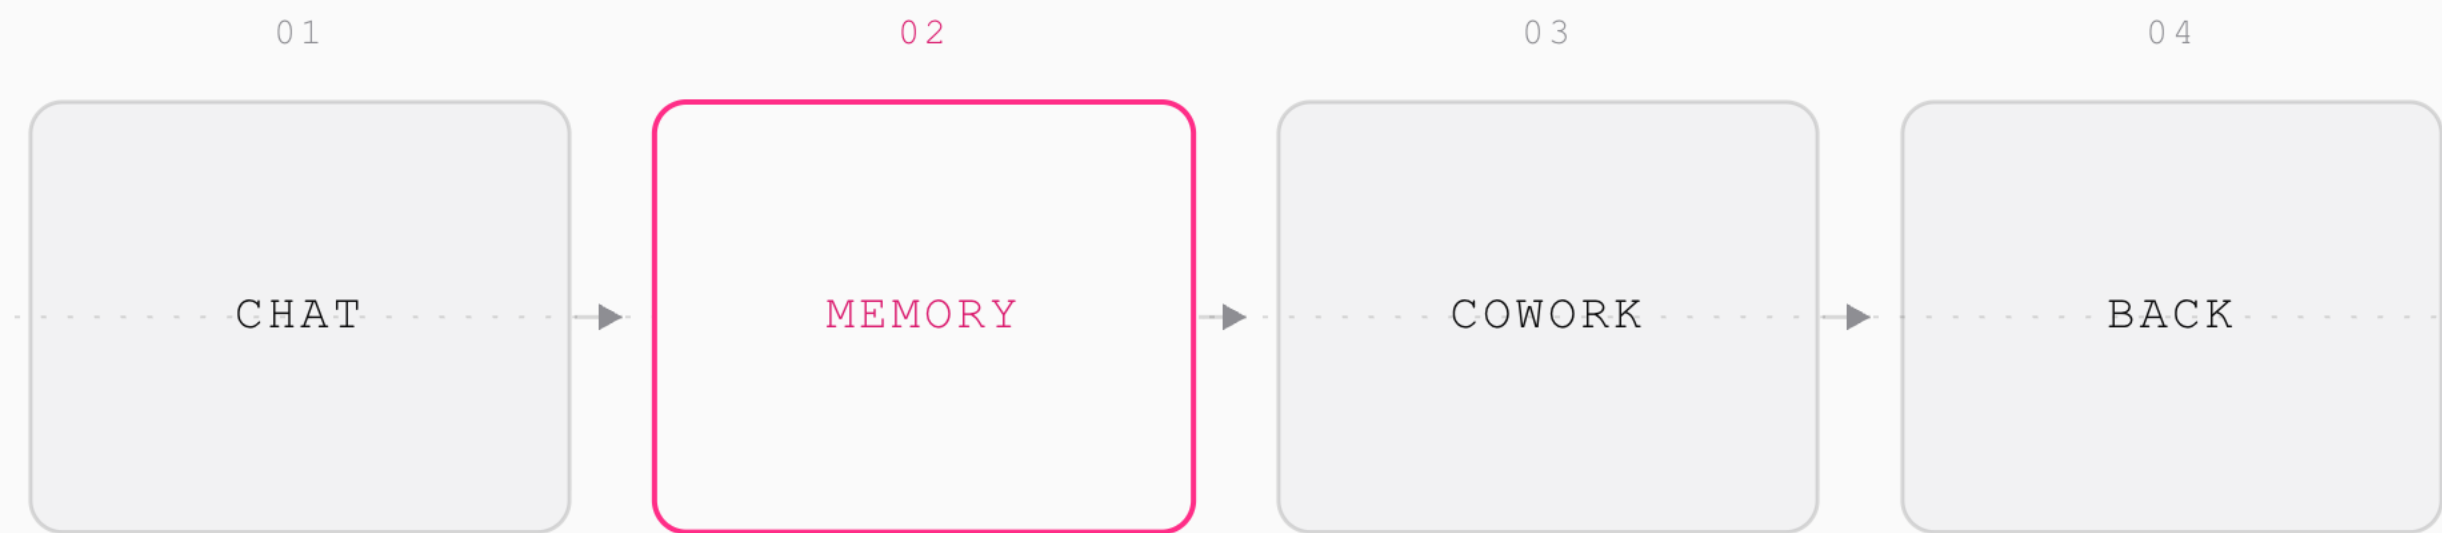

Claude Remembers Me Now. Not All Good

Shared memory across chat and Cowork helps until it doesn't.

SWIPE

One memory, every surface now

Anthropic unified memory across chat and Cowork this August. What Claude remembers in one shows up in the other.

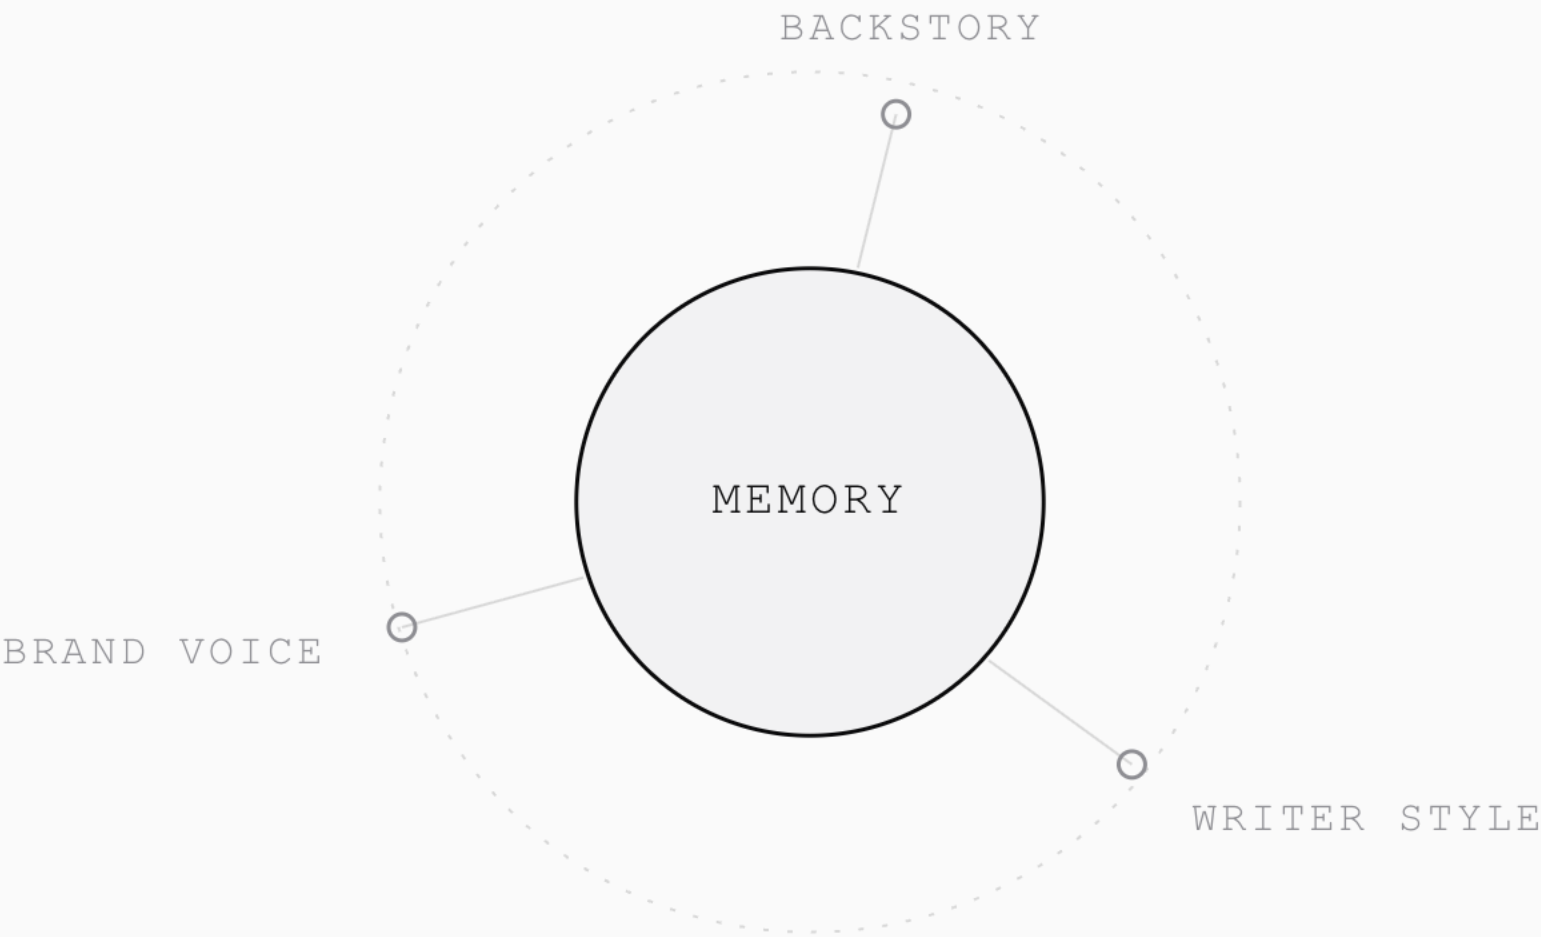

WHAT IT FIXED

03 / 06

The upside: less re-explaining, every session

Brand voice, backstory, how the writer agent should sound. I stopped repeating all three every new thread.

THE FAILURE

04 / 06

Then a three-week-old note resurfaced wrong

A CTA preference from an unrelated thread came back weeks later and nudged a decision it never should have touched.

NEW DISCIPLINE

05 / 06

The habit I didn't need before

Check what an agent remembers before trusting what it does. Anthropic lets you read, edit, or delete any stored item.

CHECK MEMORY

PASS

EDIT STALE ITEMS

PASS

THEN TRUST OUTPUT

LIVE

Running shared memory in your stack?

I want to know what surfaced wrong for you first.

TELL ME WHAT BROKE
