

The 4 automation patterns that actually have ROI

Everything else in your feed right now is a demo, not a production system.

SWIPE 

Triage: narrow decisions, small mistakes

Routing requests by content instead of a static rule. Wrong routes are cheap and easy to spot.

Enrichment: gathering, not deciding

Filling a thin record with context a human would spend ten minutes hunting for. Low risk when wrong.

■ NO. 04 · PATTERN THREE

Document intake: predictable format, catchable errors

Structured data out of invoices and contracts. A wrong field is easy to catch downstream.

HUMAN SPOT CHECK

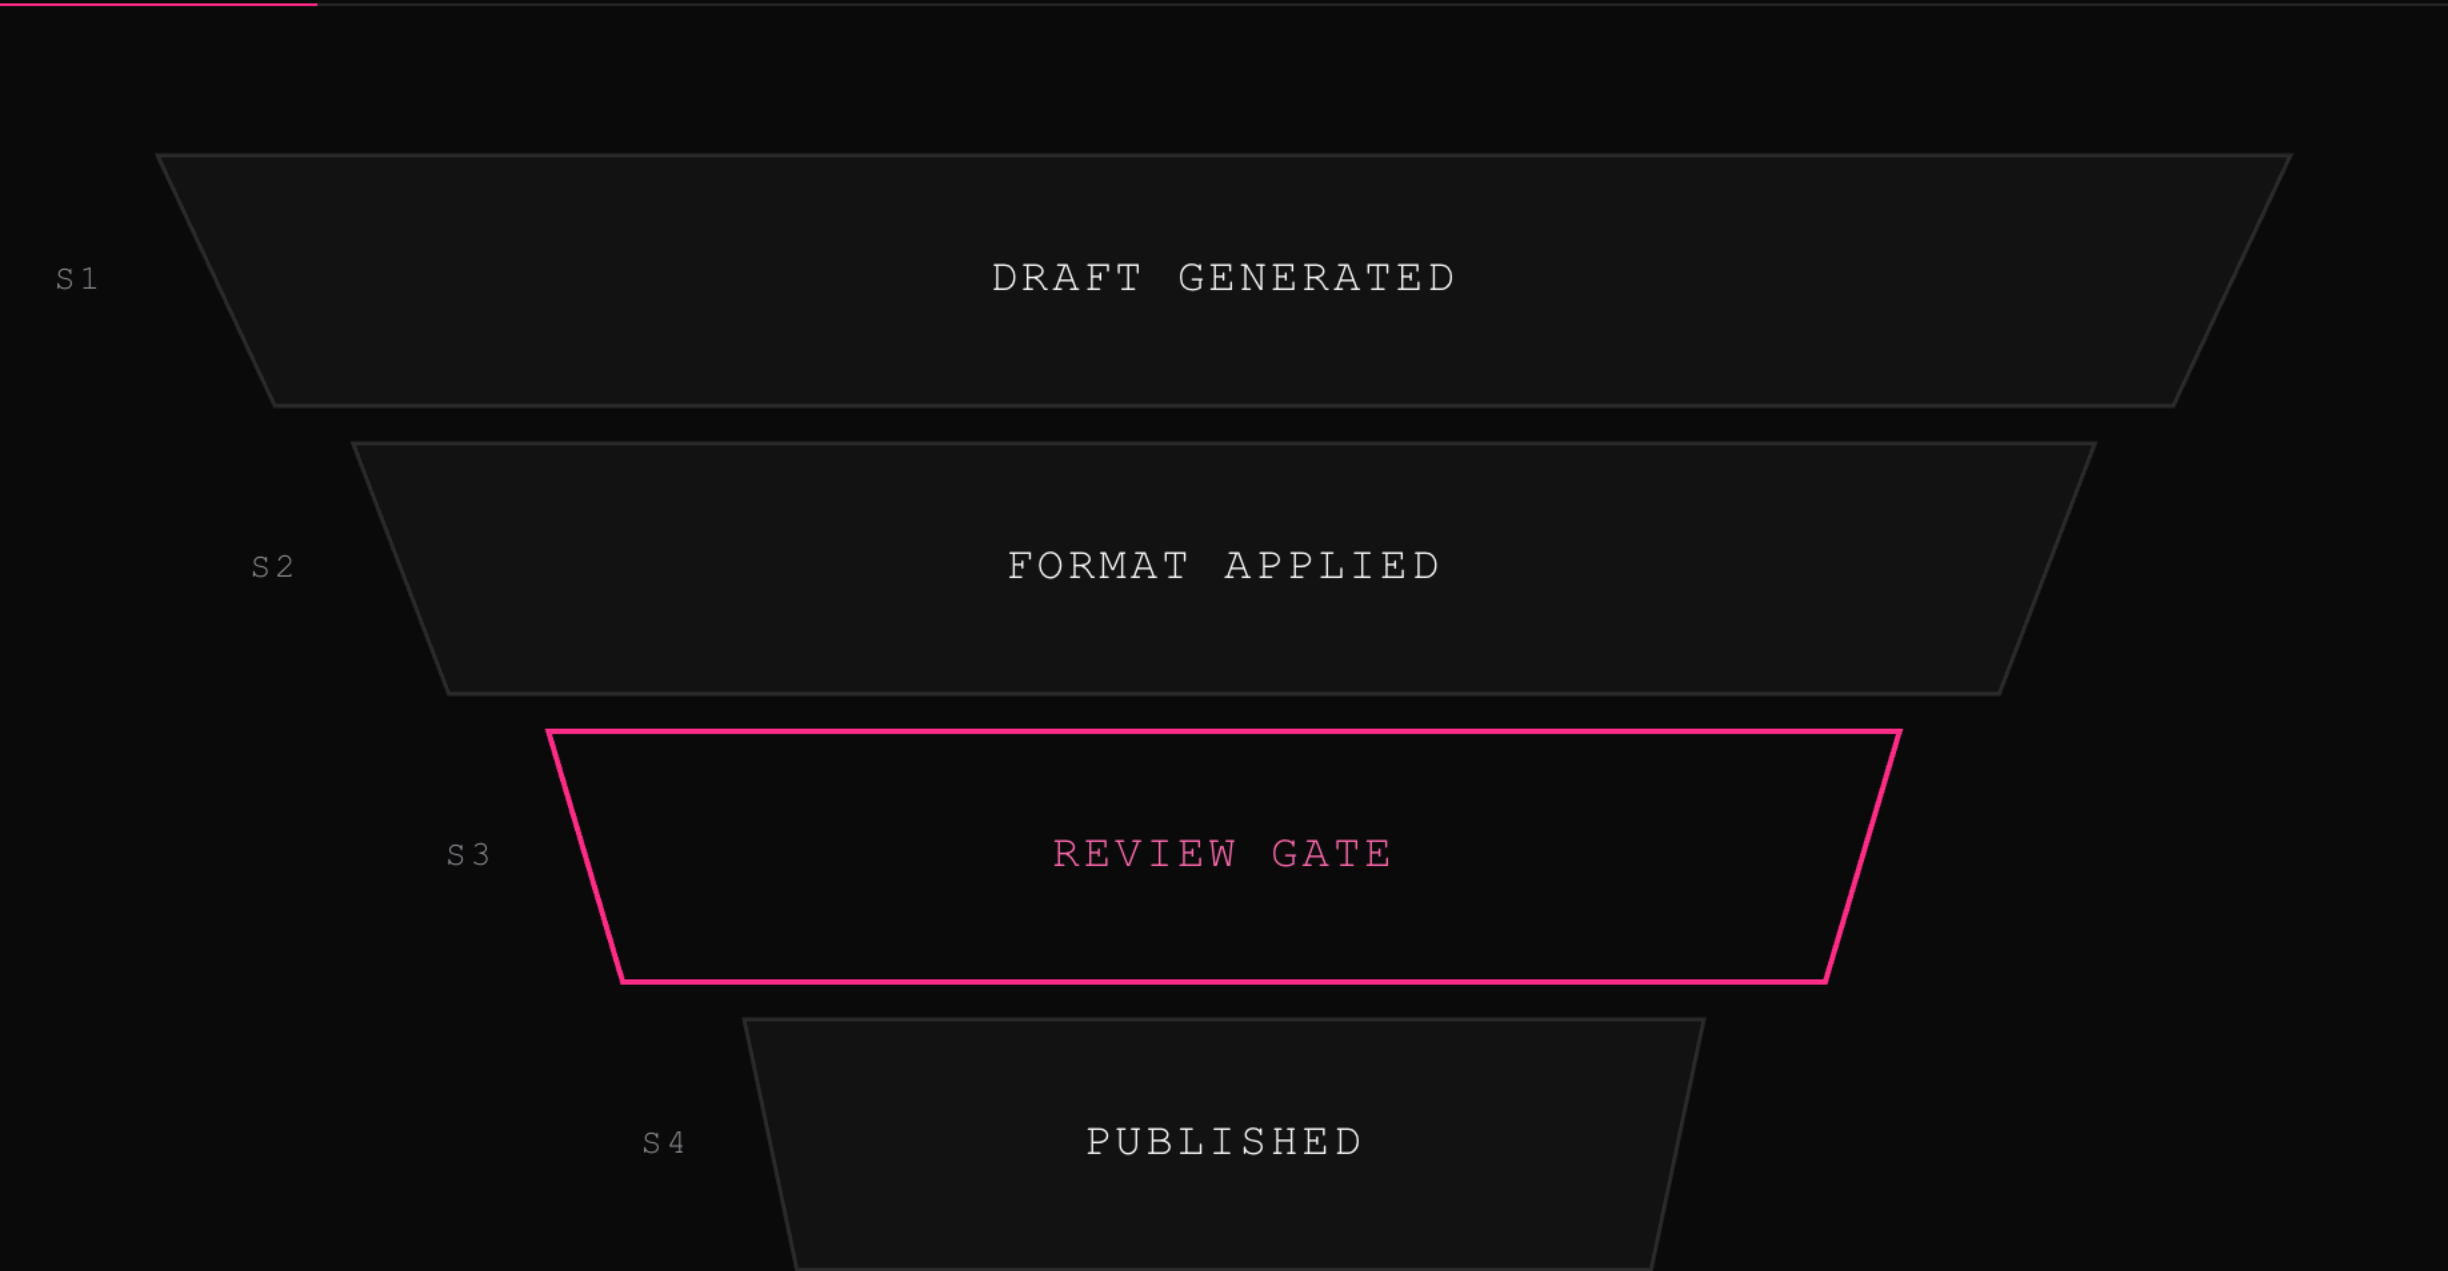

LIVE

■ NO. 05 · PATTERN FOUR

Content ops: the agent buys speed, not judgment

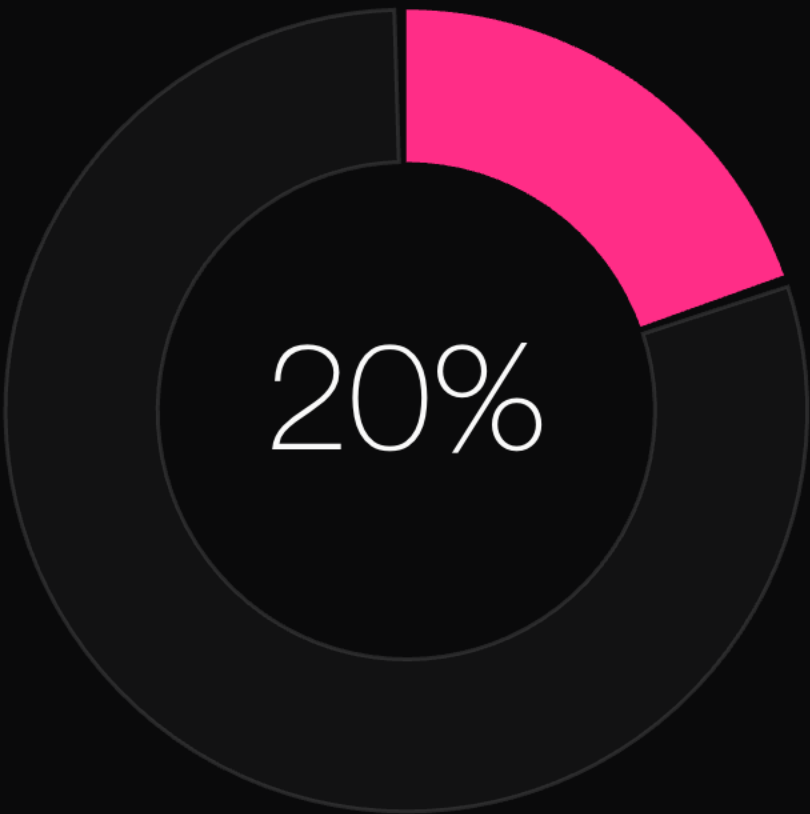

Drafting and routing through a review gate. A human still approves the final output.

■ NO. 06 · THE SPLIT

Most automation projects never reach production

Four patterns hold up under real use. Everything flashier stalls before it ships.

■ SHIPS TO PRODUCTION 20

□ STALLS AS DEMO 80

Build one of these four first

Get the gate right before you get ambitious.
