

SENDER THRESHOLDS

Gmail's target spam rate is 0.10%. AI makes volume cheap.

Arithmetic: 0.10% is one complaint per 1,000 messages. Cheap volume doesn't move that line.

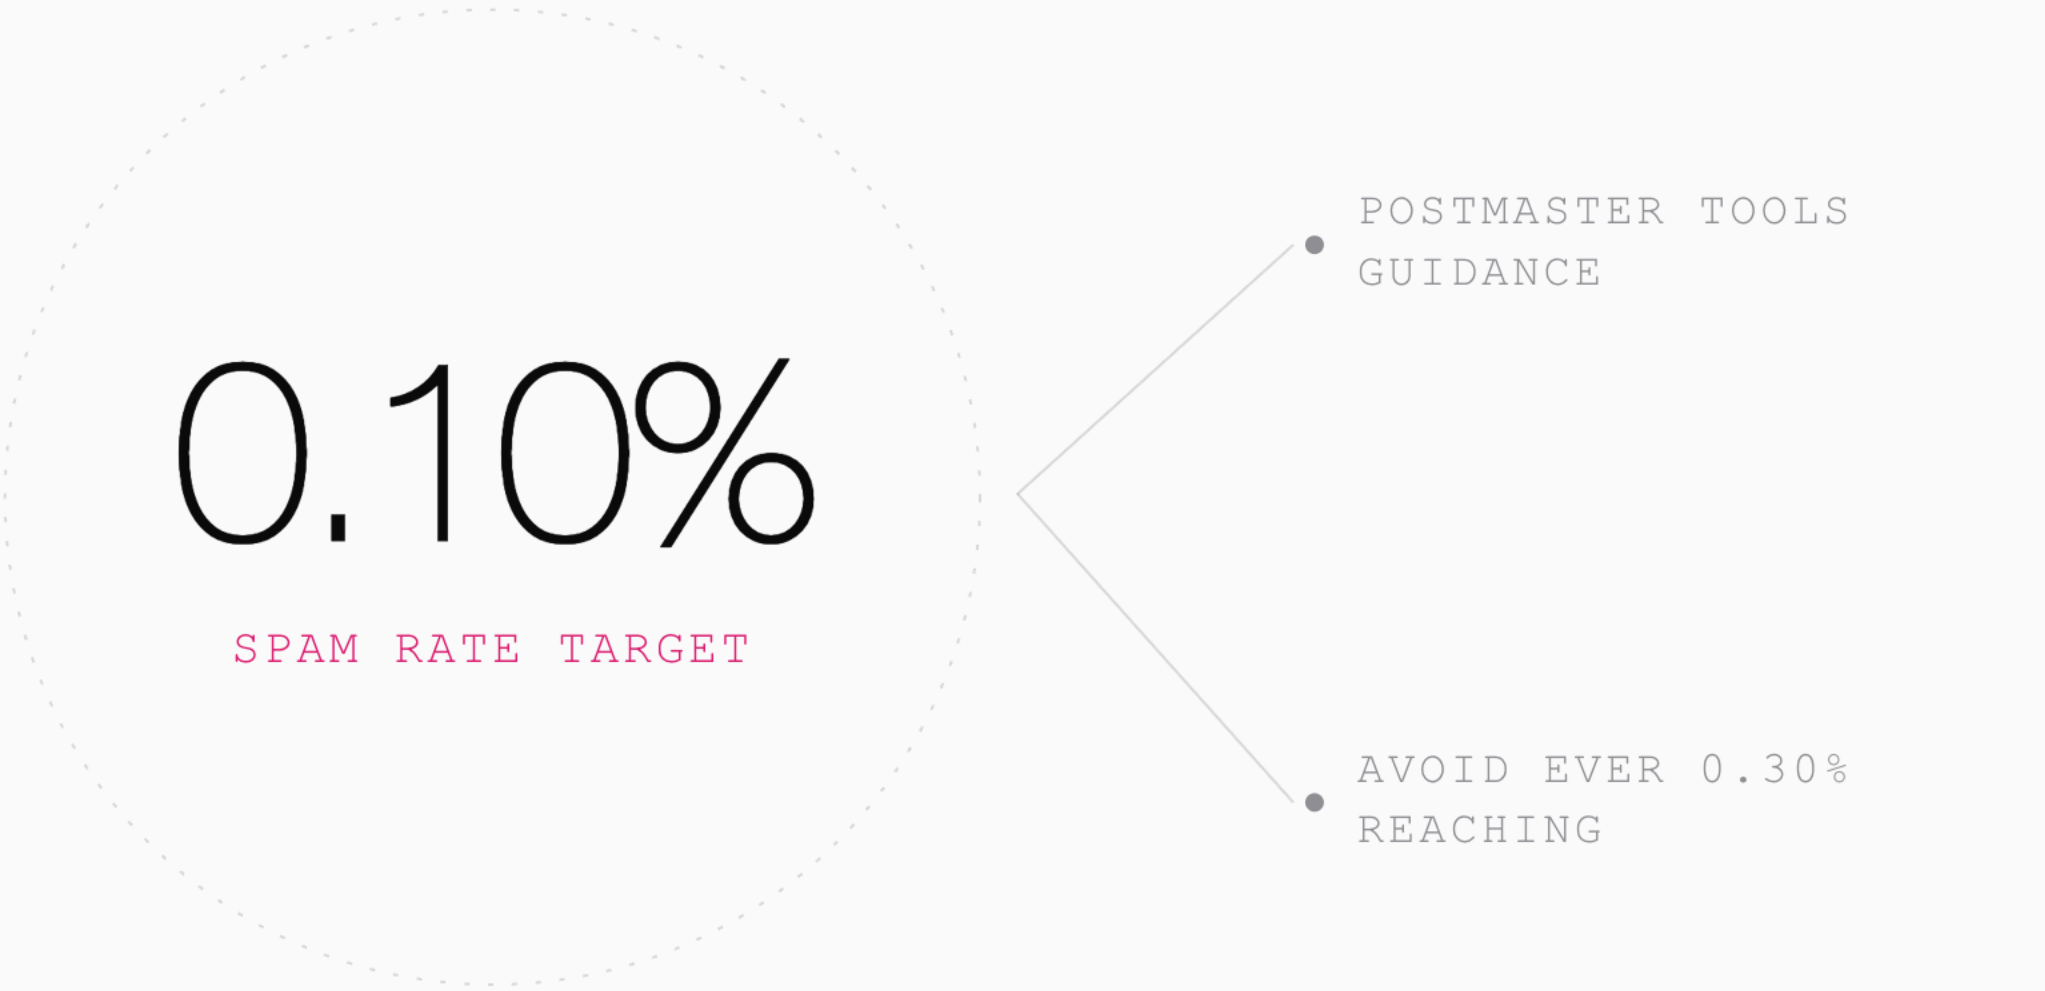

SWIPE 

THE TARGET

02 / 06

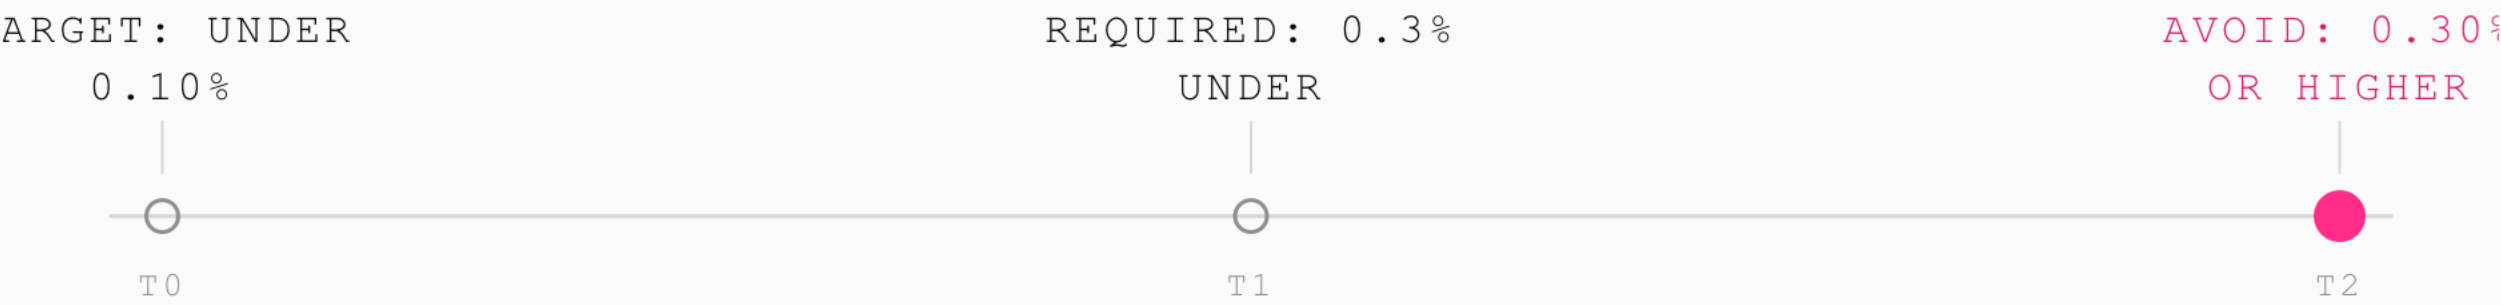

0.10% is the number to hold

Google's Postmaster Tools guidance: keep spam rates reported there below 0.10% and avoid ever reaching 0.30% or higher.

Target, requirement, and the line to avoid

Required of all Gmail senders: below 0.3%. Postmaster guidance: below 0.10%, never 0.30% or higher. Miss the requirements and mail might not be delivered as expected, or might be marked as spam.

Volume scales the complaints. The rate doesn't.

Arithmetic, not data: at a 0.10% rate, 1,000 sends is 1 complaint, 10,000 is 10, 100,000 is 100. The threshold stays fixed while the count grows.

What Google's page actually asks for

From Google's sender guidelines. The unsubscribe rules apply to senders of more than 5,000 messages per day to Gmail.
