

TRUST THRESHOLD

Cisco's Security Team: 100% Codex-Written

Not assisted. Fully agent-written, inside a compliance-bound
C and C++ codebase.

UNROLL THE DRAWING

SECTION 02 · THE NUMBER

The claim, on the record

Cisco's SVP of AI Software and Platform said every new security feature is 100% Codex-written, full team equipped.

SECTION 03 · THE REAL QUESTION

Old trust doesn't scale to agents

You used to trust years of scar tissue in a senior engineer. That doesn't transfer to code an agent wrote in seconds.

FIG. 3

OLD TRUST

TENURE

INSTINCT

SECTION 04 · BUILD SPEED

One tool, shipped in under a week

Defenseclaw, Cisco's open source security tool, went from start to finish in under a week, fully agent-written.

VERYDIAN

SECTION 05 · MY FRAMEWORK

What review discipline needs now

Automated tests before a human opens the diff, a second agent for adversarial review, and a policy for which changes need human eyes regardless of how clean they look.

I'm mapping agent code review setups

If you're running agent-written code in production, tell me what checks it before it ships.
