

THE REAL SKILL

The Bottleneck Was Never the Model

It's what you're feeding it. Context engineering beats
prompting.

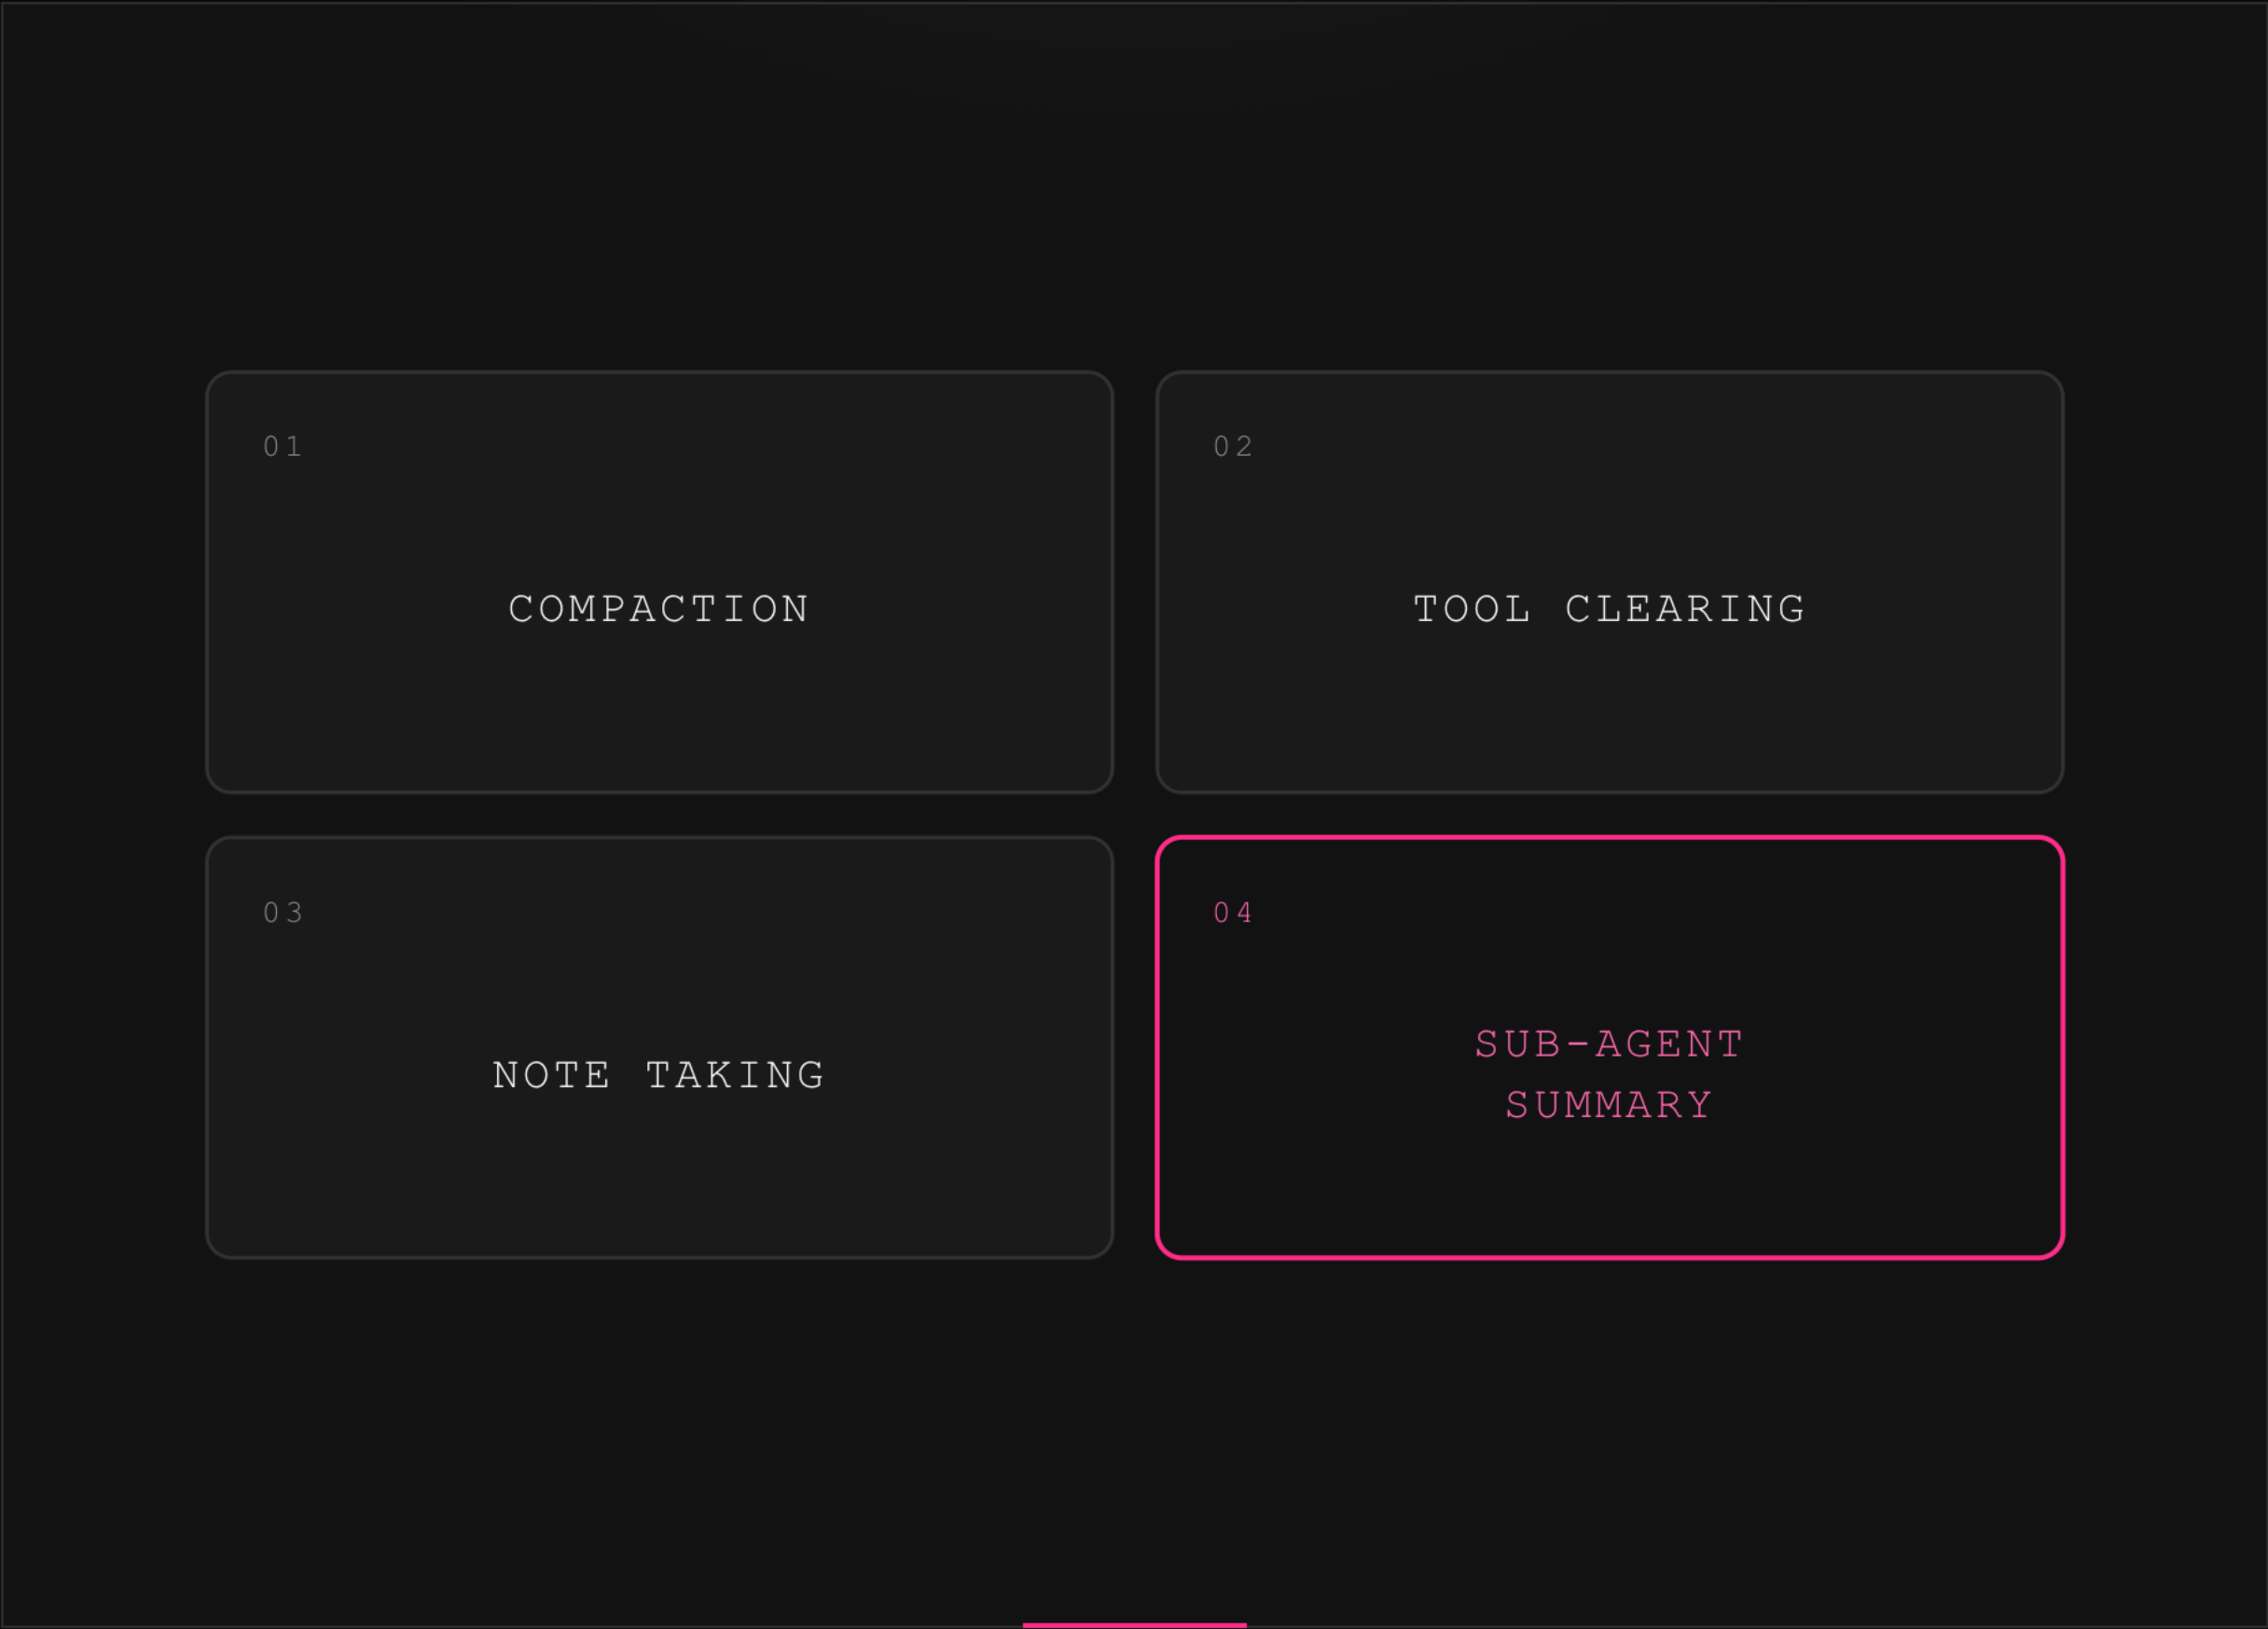

ENTER

● EXHIBIT 02 · THE DEFINITION

Context engineering, defined

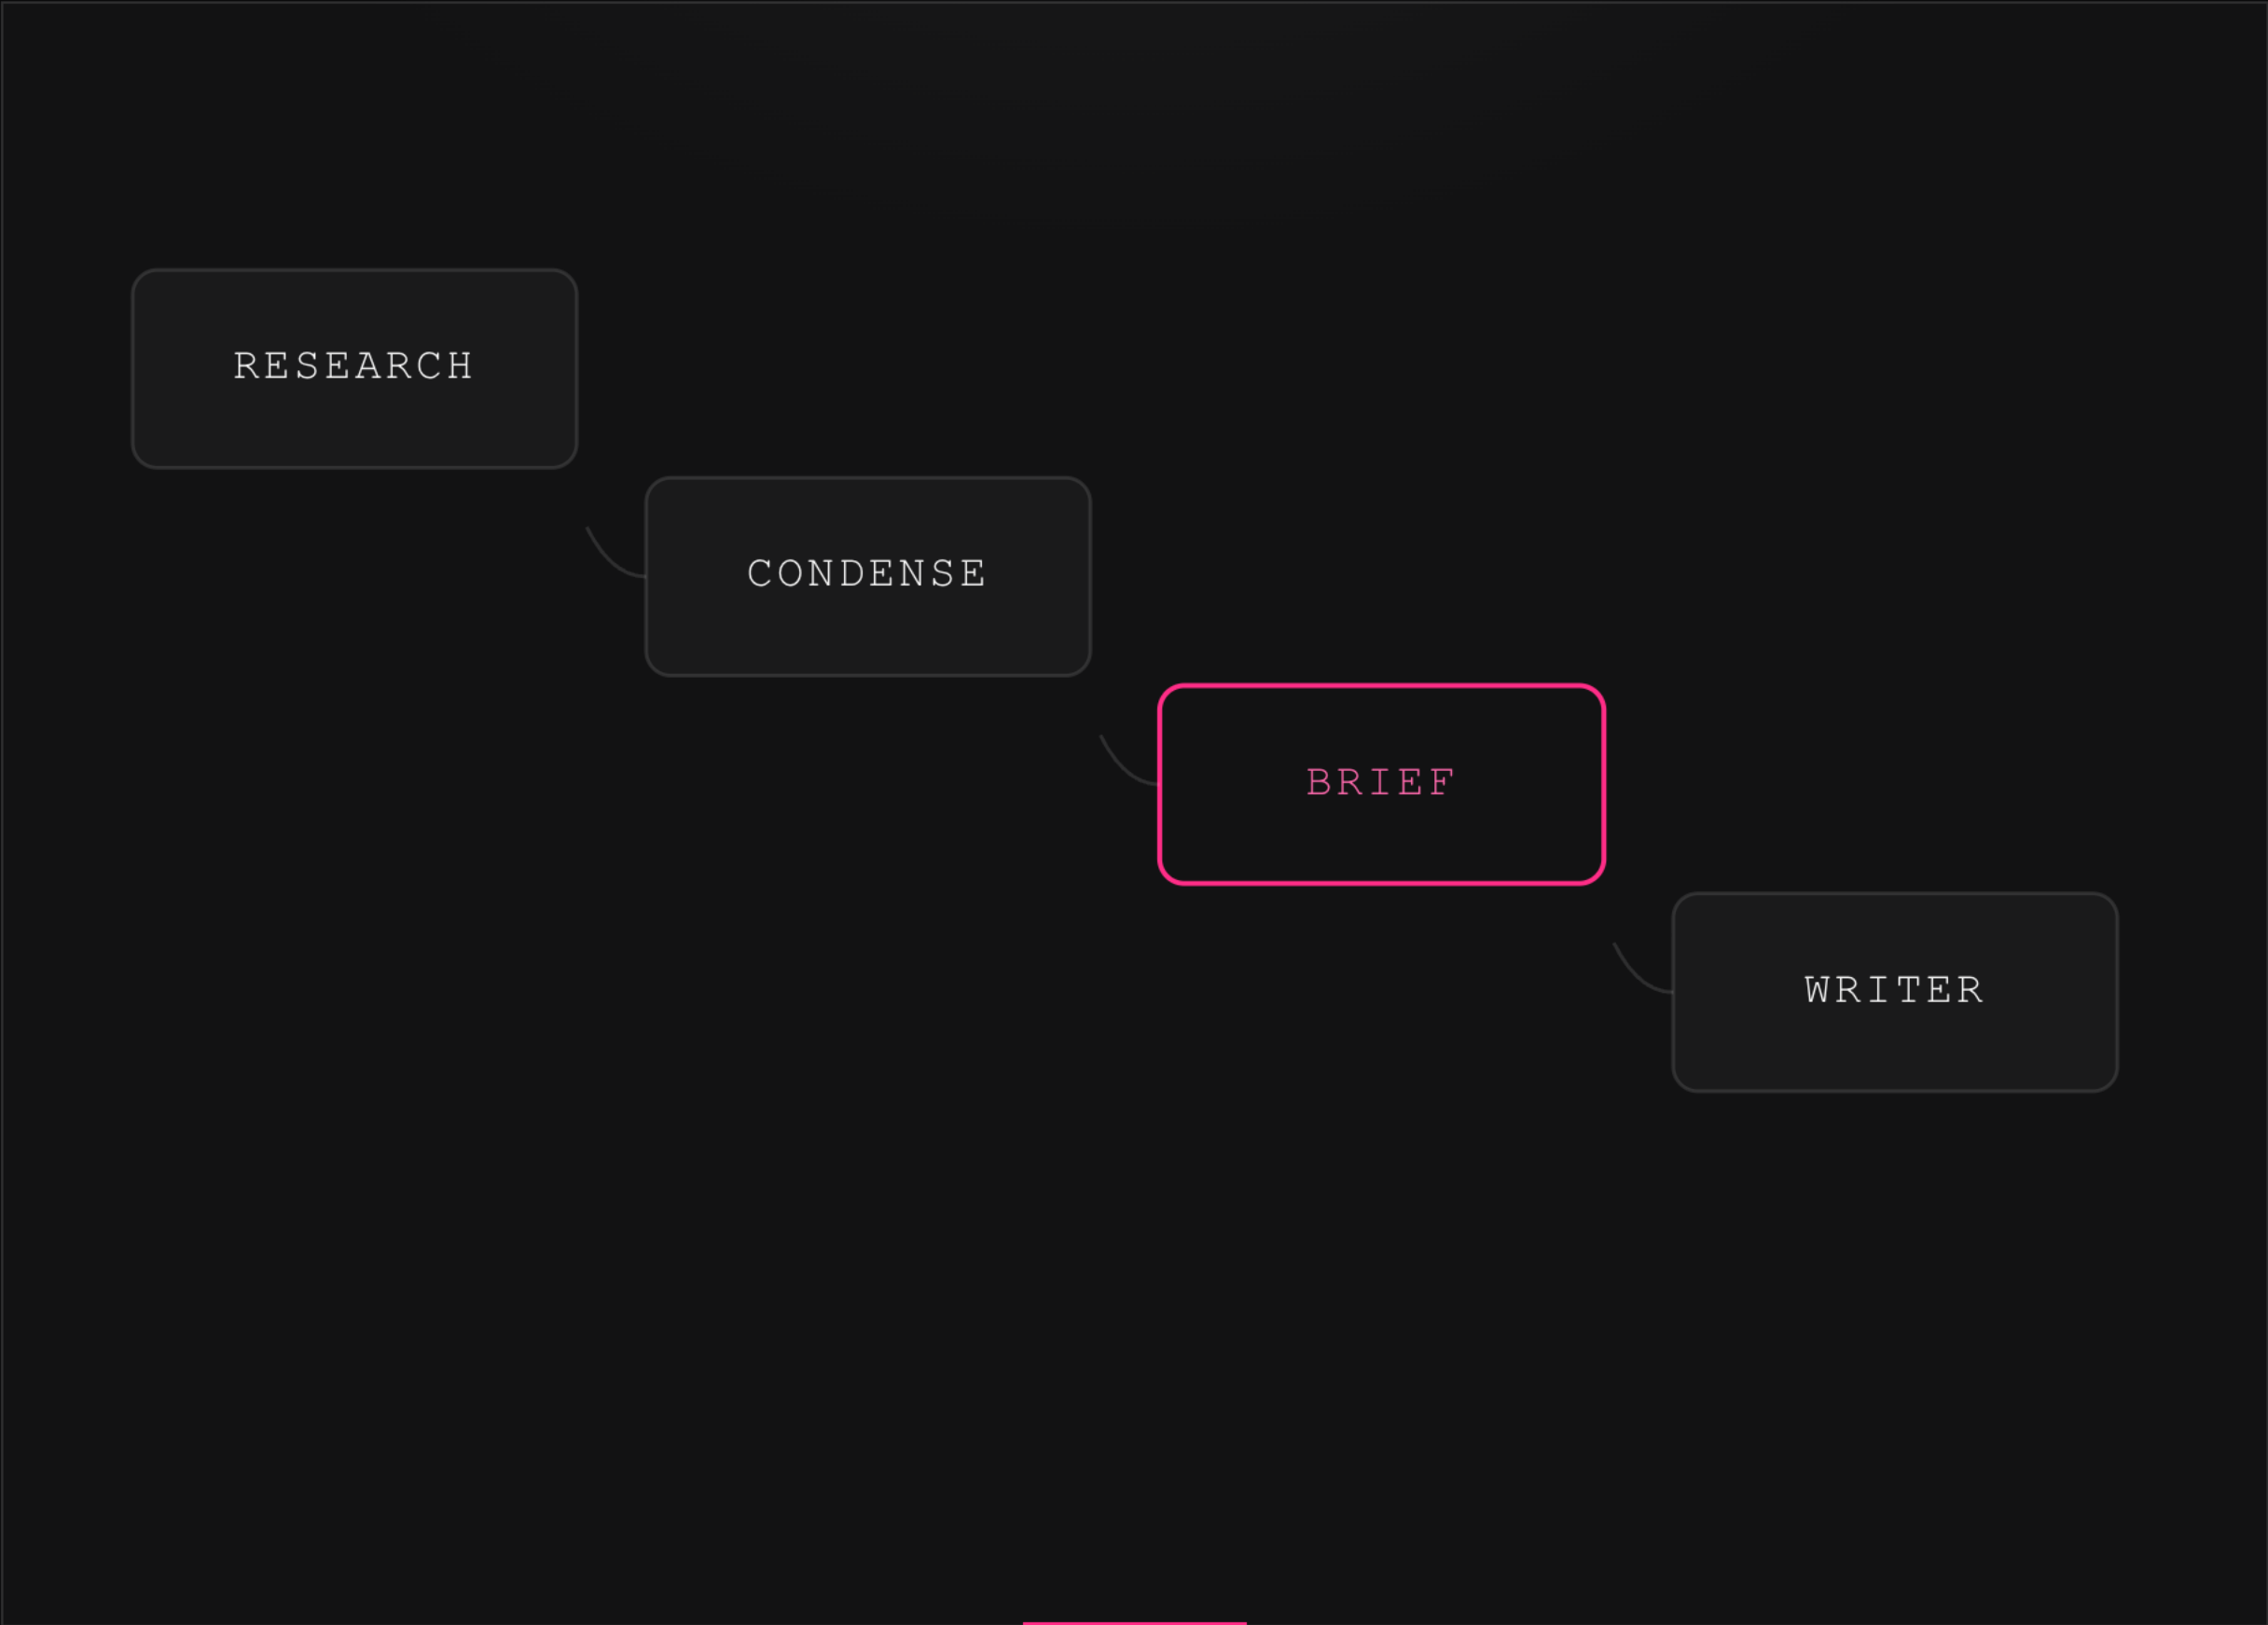

Curating and maintaining the optimal set of tokens during inference. Anthropic calls it the progression past prompt engineering.

● EXHIBIT 03 · THE TOOLKIT

Four techniques, named directly

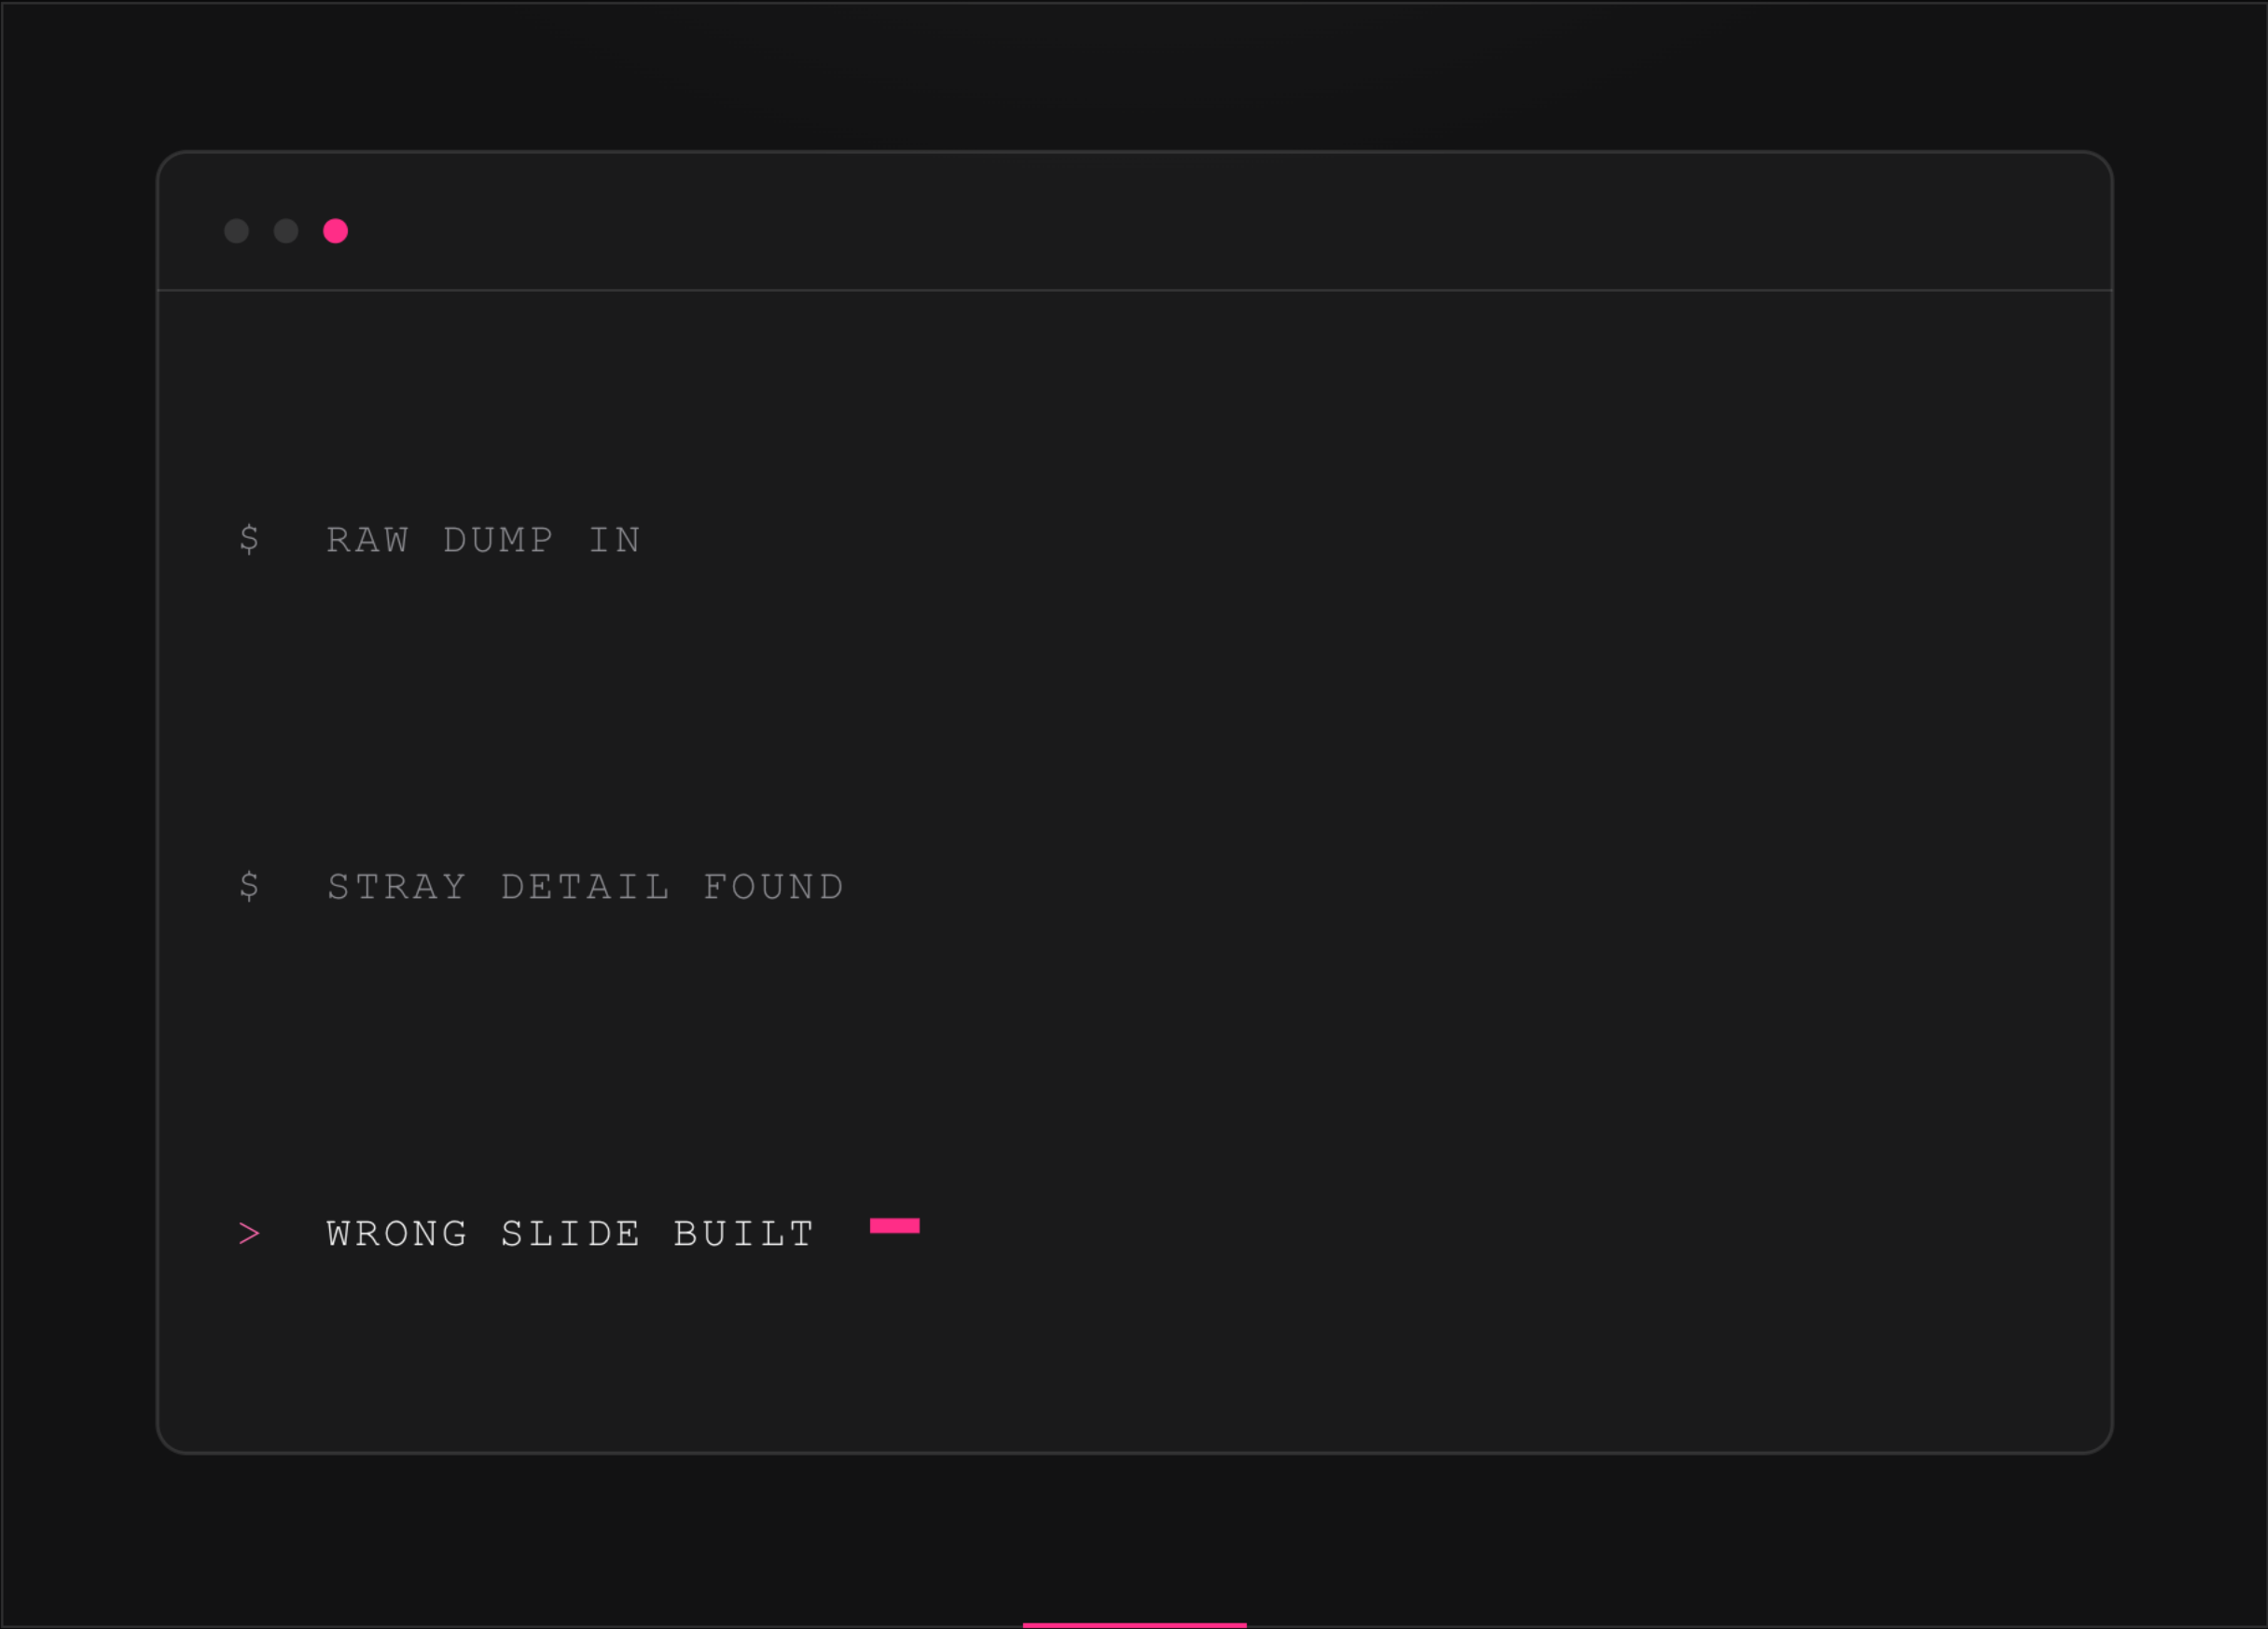

Compaction, tool-result clearing, structured notes outside the window, and condensed sub-agent summaries.

● EXHIBIT 04 · HOW I BUILT IT

My research agent never hands over the transcript

It returns a condensed brief. Sourced facts, a few quotes, nothing raw. The writer never sees the full dump.

● EXHIBIT 05 · BEFORE THE FIX

The failure I used to hit

A raw research dump let the writer latch onto a stray detail from page four and build a slide around it.

Check what you're feeding your agents

Before you upgrade the model, audit the context first.

AUDIT YOUR CONTEXT
