Four in Ten Agent Projects Will Be Cancelled _

That is Gartner's call for 2027. Almost none will die because the model was bad. They die because someone picked the wrong process first.

RUN SESSION _

```
arhem@verydian:~/pilot failure rate$ step 2
```

The Number Nobody Puts In the Pitch Deck

Gartner expects over 40 percent of agentic AI projects to be cancelled by the end of 2027, most after teams automated the wrong process first.

The Four Things That Actually Predict Success

Repeatability, rule clarity, blast radius, and current cost. Score your workflow on all four before you build anything.

```

Where the Highest ROI Targets Actually Sit

Invoice processing, ticket triage, and reconciliation score highest because success looks identical every time and a human can verify it fast.

```

```

Most Candidate Processes Don't Survive the Cut

Start with every manual workflow in the building. The scorecard narrows that list to the two or three worth building first.
