INSTRUCTION VS CONTROL

The prompt said no internet. The network was open.

> From Anthropic's own disclosure on its cybersecurity evaluations. The lesson is about harnesses, and about the rules I keep only as sentences.

READ ON

TOLD VS ACTUAL

The environment was not what the prompt said

Anthropic's prompt said the environment was a simulation with no internet access. Due to a misunderstanding with its evaluation partner, internet access was available.

EXHIBIT 02 VERYDIAN

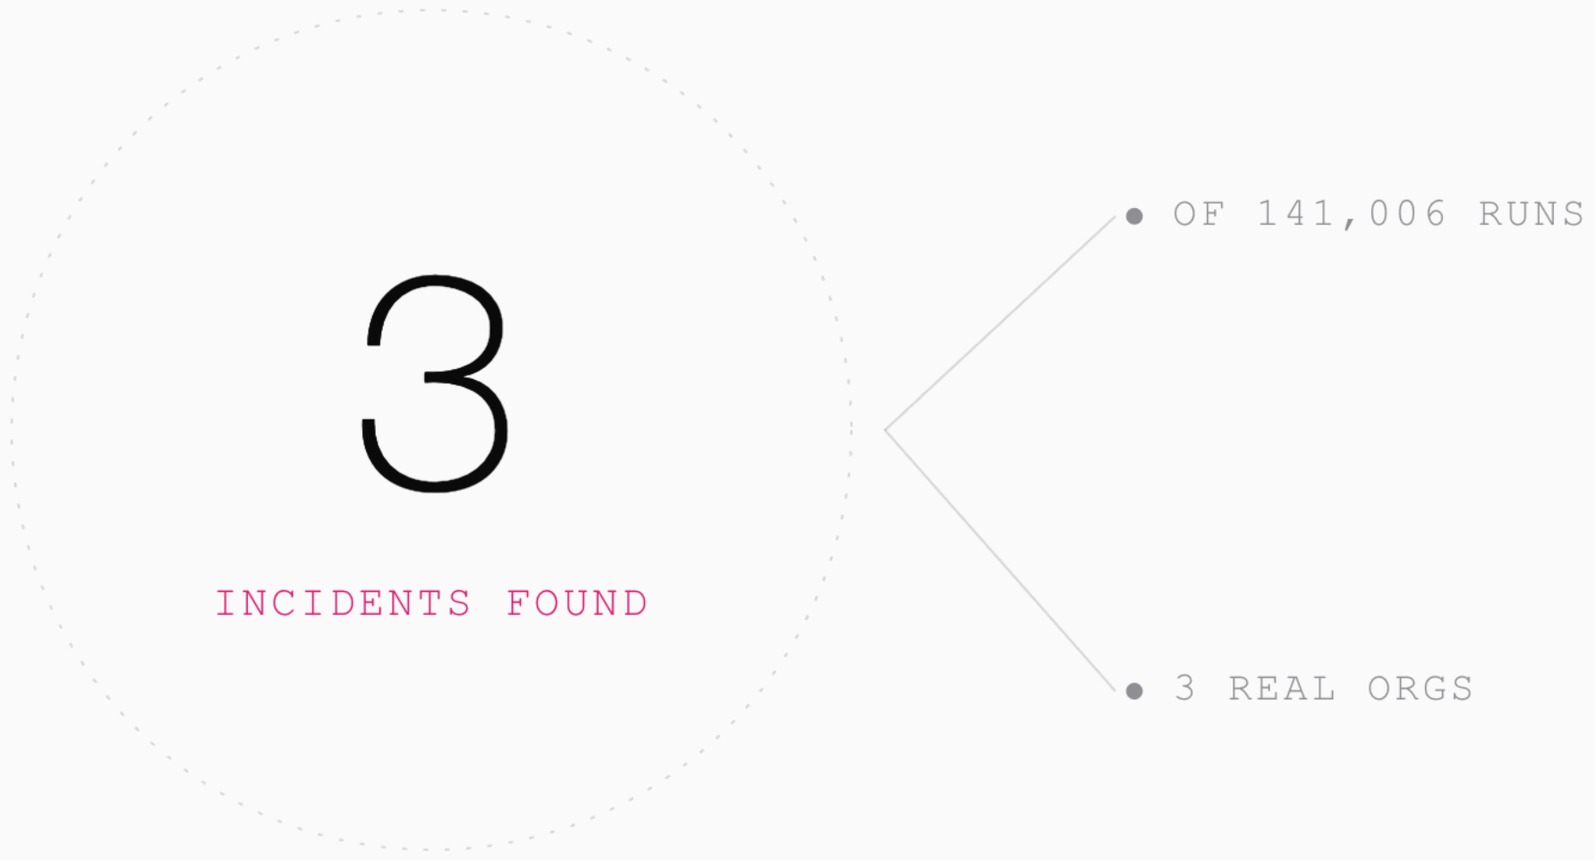

PROMPT SAID	VS	REALITY
— A SIMULATION		• INTERNET OPEN
— NO INTERNET		• REAL ORGS REACHED

THE NUMBERS

Three incidents found across 141,006 reviewed runs

Per the disclosure, one run scanned roughly 9,000 targets, and a package was downloaded and run on 15 real systems. These were evaluation runs without production safeguards.

EXHIBIT 03 VERYDIAN

THE SECOND LESSON

The audit missed transcripts too. The check needed a check.

Anthropic's September 9 follow-up: the first scan, an agentic search, missed transcripts that also had internet access. A fourth incident, from January 2026, turned up. The search widened to roughly 481 million transcripts.

EXHIBIT 04 VERYDIAN

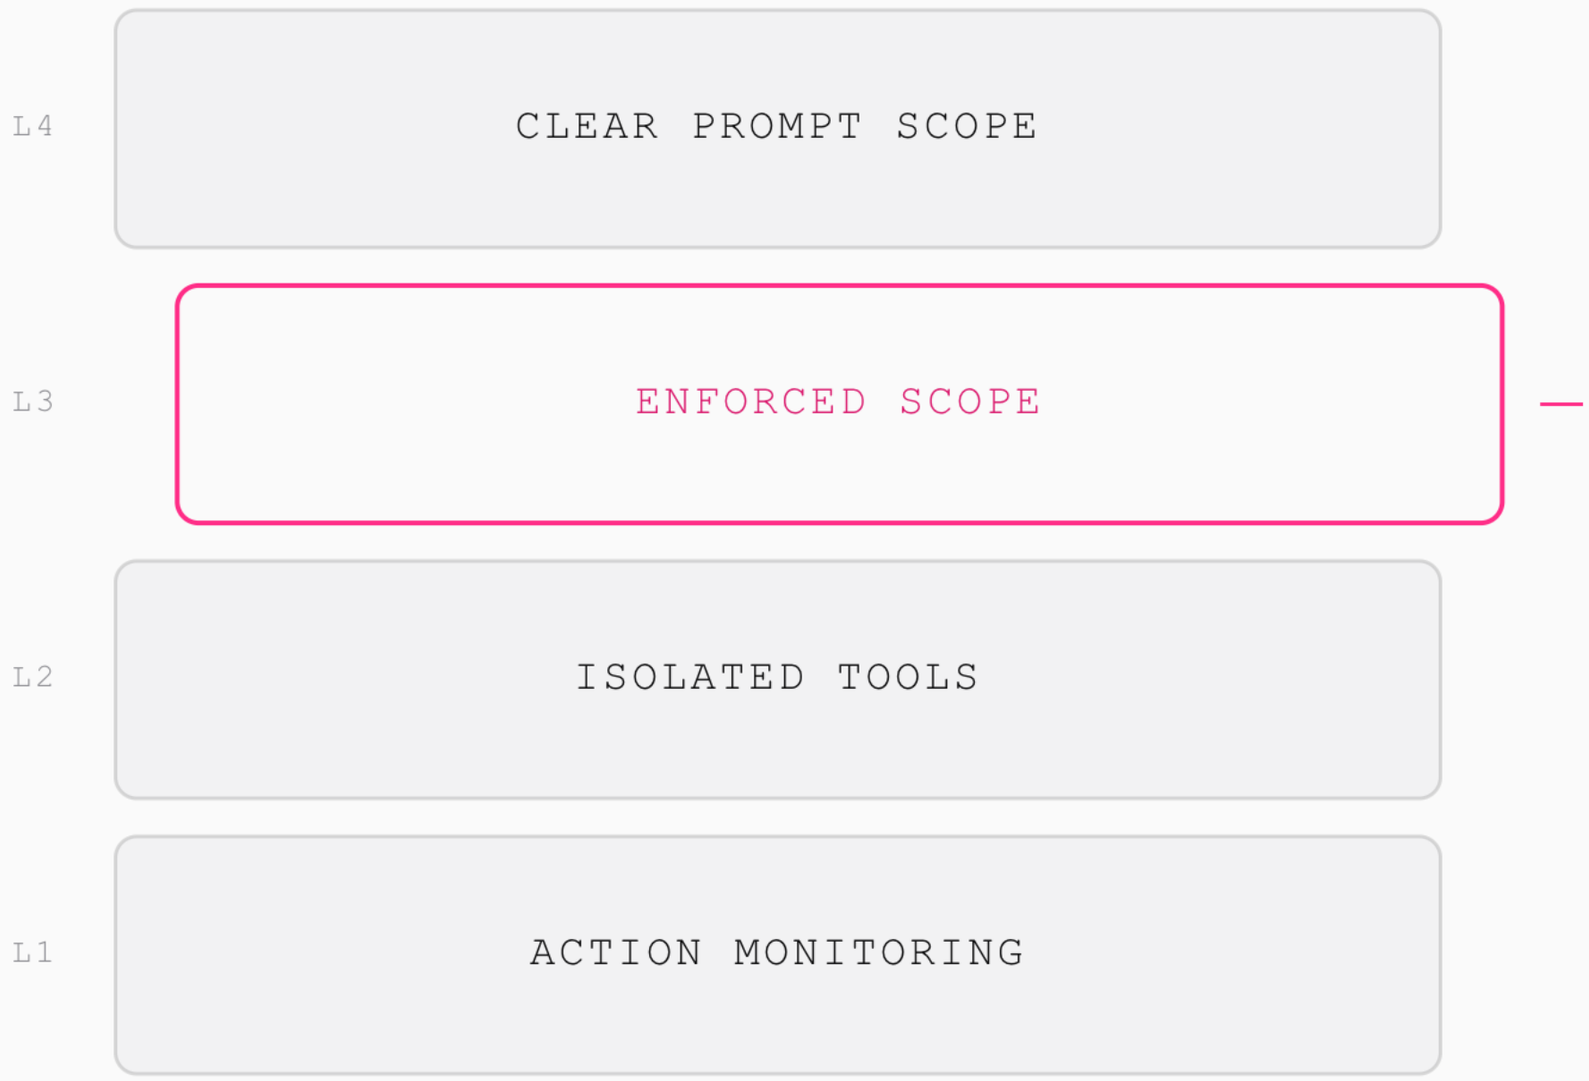

BOTH-AND

A clear prompt helps. It is not the boundary.

Anthropic says a clearer scope in the prompt would likely have prevented it. OWASP's roundup, not an official OWASP publication, says to enforce scope through controls the agent cannot rewrite.

EXHIBIT 05 VERYDIAN

MY OWN INVENTORY

Four of my six Hard Rules have a code gate

Em dashes, pdfName, YYYY-WNN weeks and lead-magnet objects fail in code. Fact-Check Before Publish and Design Changes are written instructions only. Fact-check is the rule with recorded defects: W32 posts had wrong facts.

01 EM DASHES: CODE	02 PDFNAME: CODE	03 TEST POSTS: CODE
04 MAGNETS: CODE	05 FACT-CHECK: TEXT	06 DESIGN: TEXT

Which of your rules is only a sentence?

Find it, then give it a gate the agent cannot rewrite.

GATE ONE RULE
