

ORCHESTRATION COST

The Swarm Tax Nobody Prices Into the Demo

A single strong agent beats a swarm on most tasks. Nobody puts that on the pricing page.

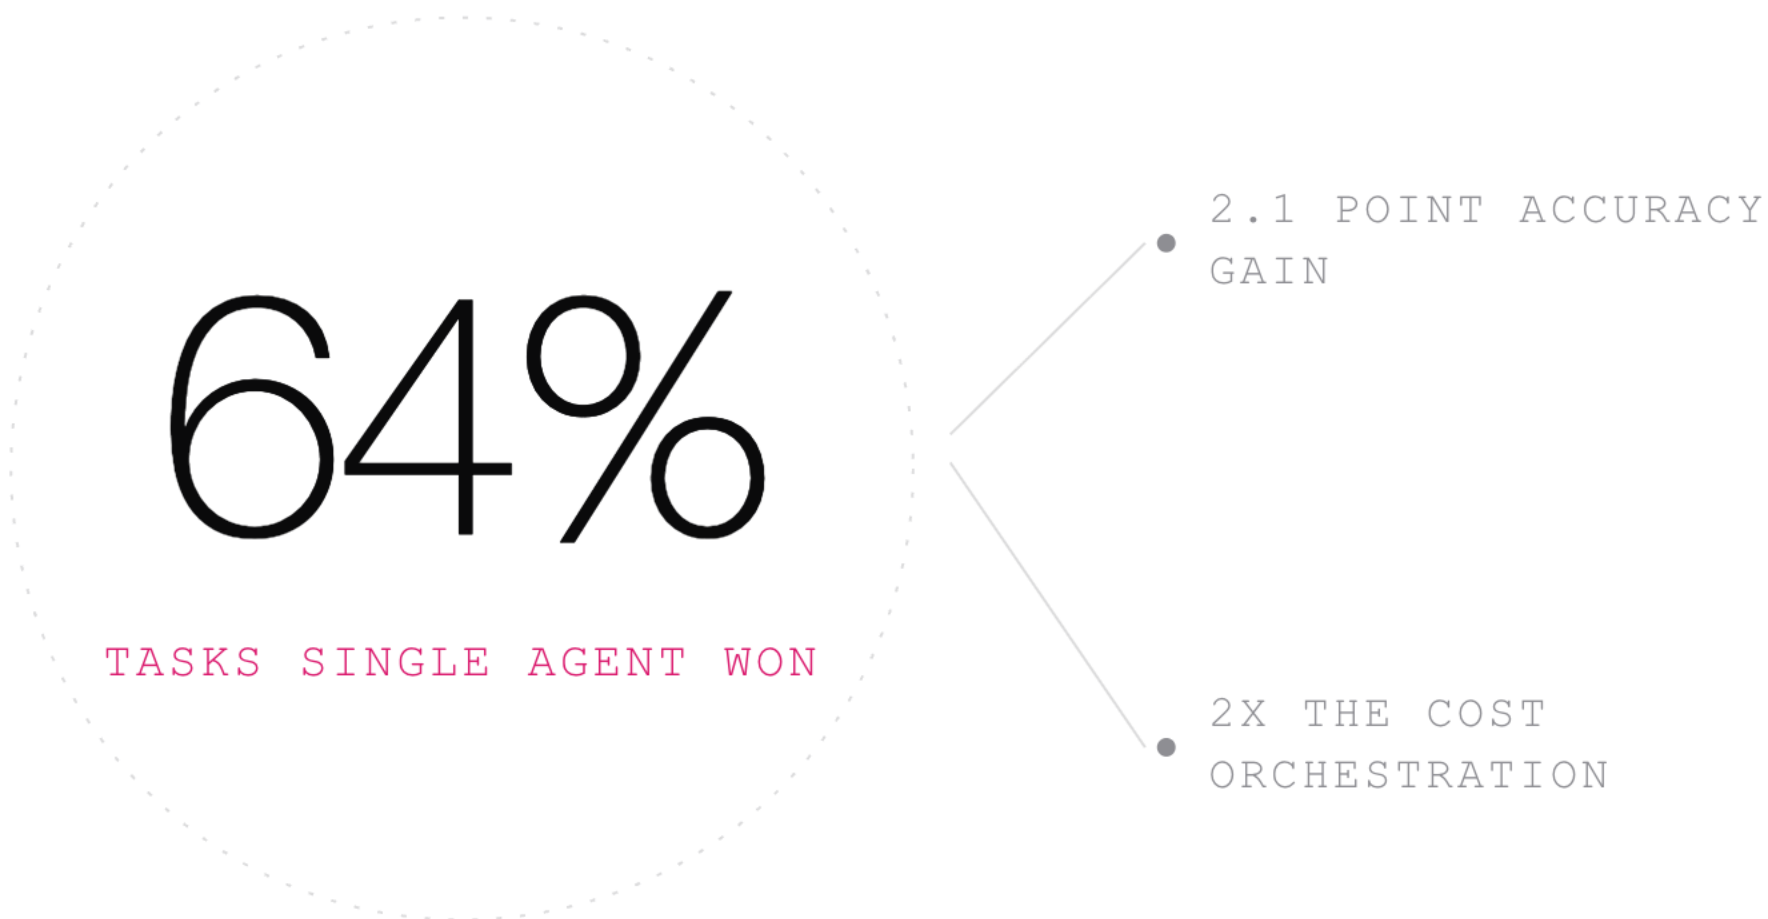

UNROLL THE DRAWING

SECTION 02 · PRINCETON BENCHMARK

One Agent Beat the Swarm Most of the Time

A single well-built agent matched or outperformed multi-agent orchestration on 64 percent of benchmarked tasks, given the same tools and context.

SECTION 03 · ORCHESTRATION OVERHEAD

What a Swarm Actually Adds to the Build

A hub agent coordinating four satellite agents adds coordination overhead at every handoff, and every handoff is a place state can drift.

FIG. 3

SECTION 04 · WHEN IT'S WORTH IT

When a Second Agent Actually Earns Its Cost

Independent workstreams with no shared state justify a second agent.
Everything else runs better on one agent with full context.

FIG. 4

SINGLE AGENT

- SHARED CONTEXT ALWAYS
- LOWER COST PER TASK
- 64% TASK WIN RATE

VS

MULTI AGENT SWARM

- INDEPENDENT ONLY WORKSTREAMS
- 2X COST PER TASK
- COORDINATION RISK AT SCALE

SCALE · PRODUCTION

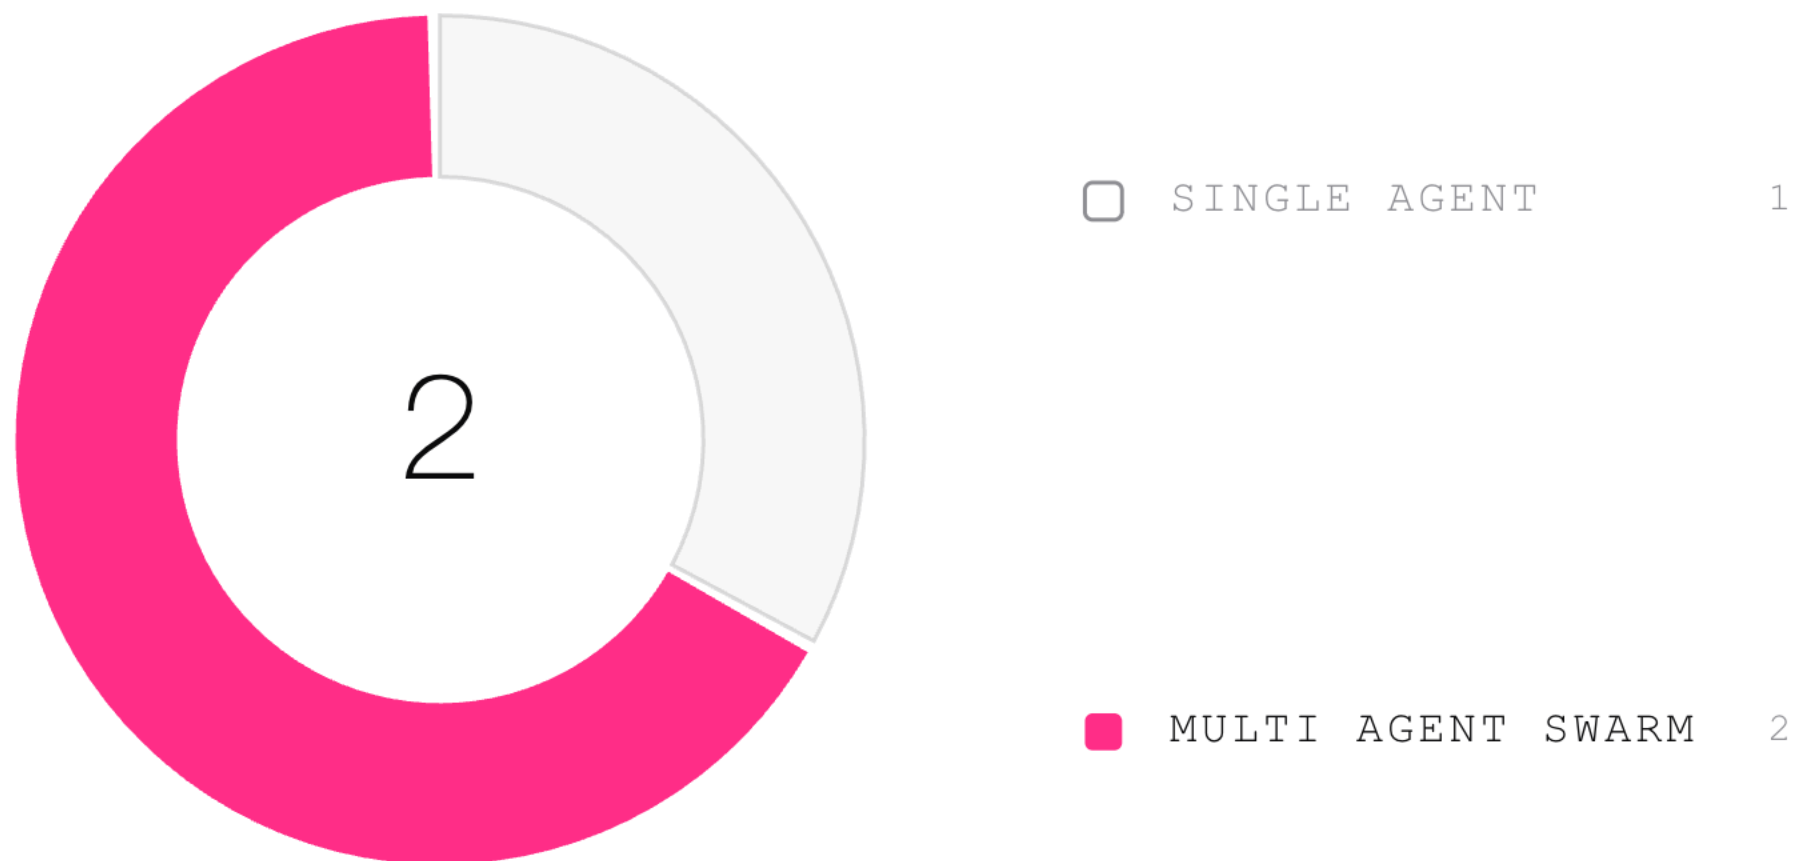

VERYDIAN

SECTION 05 · COST COMPARISON

The Cost Difference Is Not Small

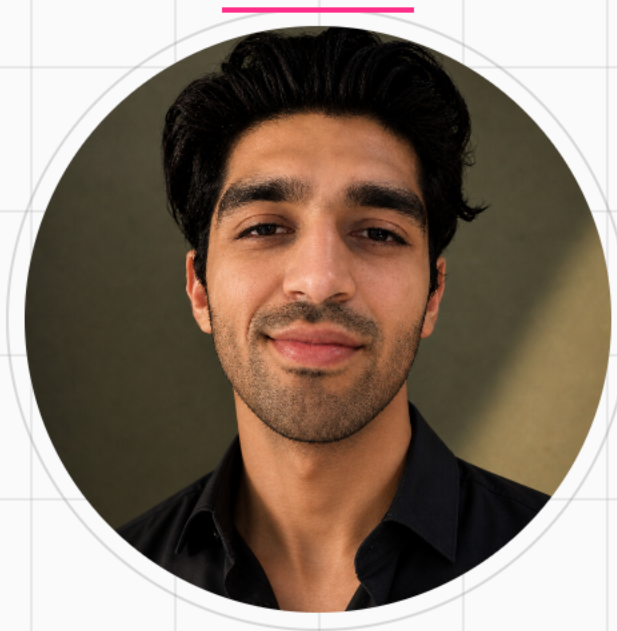

Multi-agent orchestration runs roughly double the cost of a single agent for a 2.1 point accuracy gain most tasks do not need.
