

1,000 Subagents Changed What I Can Build Solo

Not speed. The constraint that actually moved.

02 ·

The Old Ceiling Was Concurrency, Not Intelligence

Every architecture that needed 200 parallel evals got batched. Not because the design was wrong. Because the tool couldn't hold it.

03 ·

You Used to Scope Around the Limit

The real cost wasn't latency. It was every design decision made to avoid hitting the ceiling. That overhead disappears when the ceiling moves.

04 ·

A Nightly Batch Job Became a Live Orchestration

40 subagents, one orchestrator, continuous output. Rebuilt last week. What used to need a sprint took one session.

The Category That Actually Moved: Things You Hired For

Work requiring human coordination because the tool couldn't hold state. Those weren't automation candidates. Now they are.
