SKILL AUDIT

# A skill is a folder that can pre-approve tools

> It can also register hooks. For a project skill, workspace trust does not gate the tool grant.

READ ON

THE STANDARD

# Skills became a shared install format

Anthropic announced on October 22 that it is donating the standard. By its count: 1 million skills published, nearly 280 million installed, more than 70 platforms.

WHAT A FOLDER HOLDS

# One folder holds more than instructions

Anthropic: a skill is a SKILL.md plus any scripts or reference material. Per the Claude Code docs, frontmatter can declare hooks and allowed-tools, and scripts are executed, not loaded.

EXHIBIT 03 VERYDIAN

INVOCATION

# Invoke once, and the grants start

When a skill is invoked, its hooks register and keep running for the rest of the session. Its allowed-tools apply without asking, for that turn.

FOLDER AUDIT

# What my own skills folder declares

A one-off script count this week, so read it as about. Most of the folder is third-party. The one skill I wrote is a single SKILL.md with no scripts.

EXHIBIT 05 VERYDIAN

AUDIT STEPS

# My four-step skill audit

Mine, not Anthropic's. The docs only give the warning about allowed-tools in repository skills.

EXHIBIT 06 VERYDIAN

- [x] READ FRONTMATTER BEFORE BODY — PASS
- [x] OPEN ANY SCRIPTS FOLDER — LIVE
- [x] COPY, OR A LIVE LINK? — PASS
- [x] RE-READ AFTER EVERY UPDATE — PASS

# Read the frontmatter before you run it

allowed-tools and hooks first, then the scripts folder.
