

A CLOSE CALL

I Almost Let An Agent Delete Something

I couldn't have named what it was if you'd asked me. Here's what stopped it.

SWIPE

02 · the moment

Speed Versus Knowing What You're Deleting

I'd approved four commands in a row without reading them closely. The fifth was `rm -rf` on a path I didn't recognize.

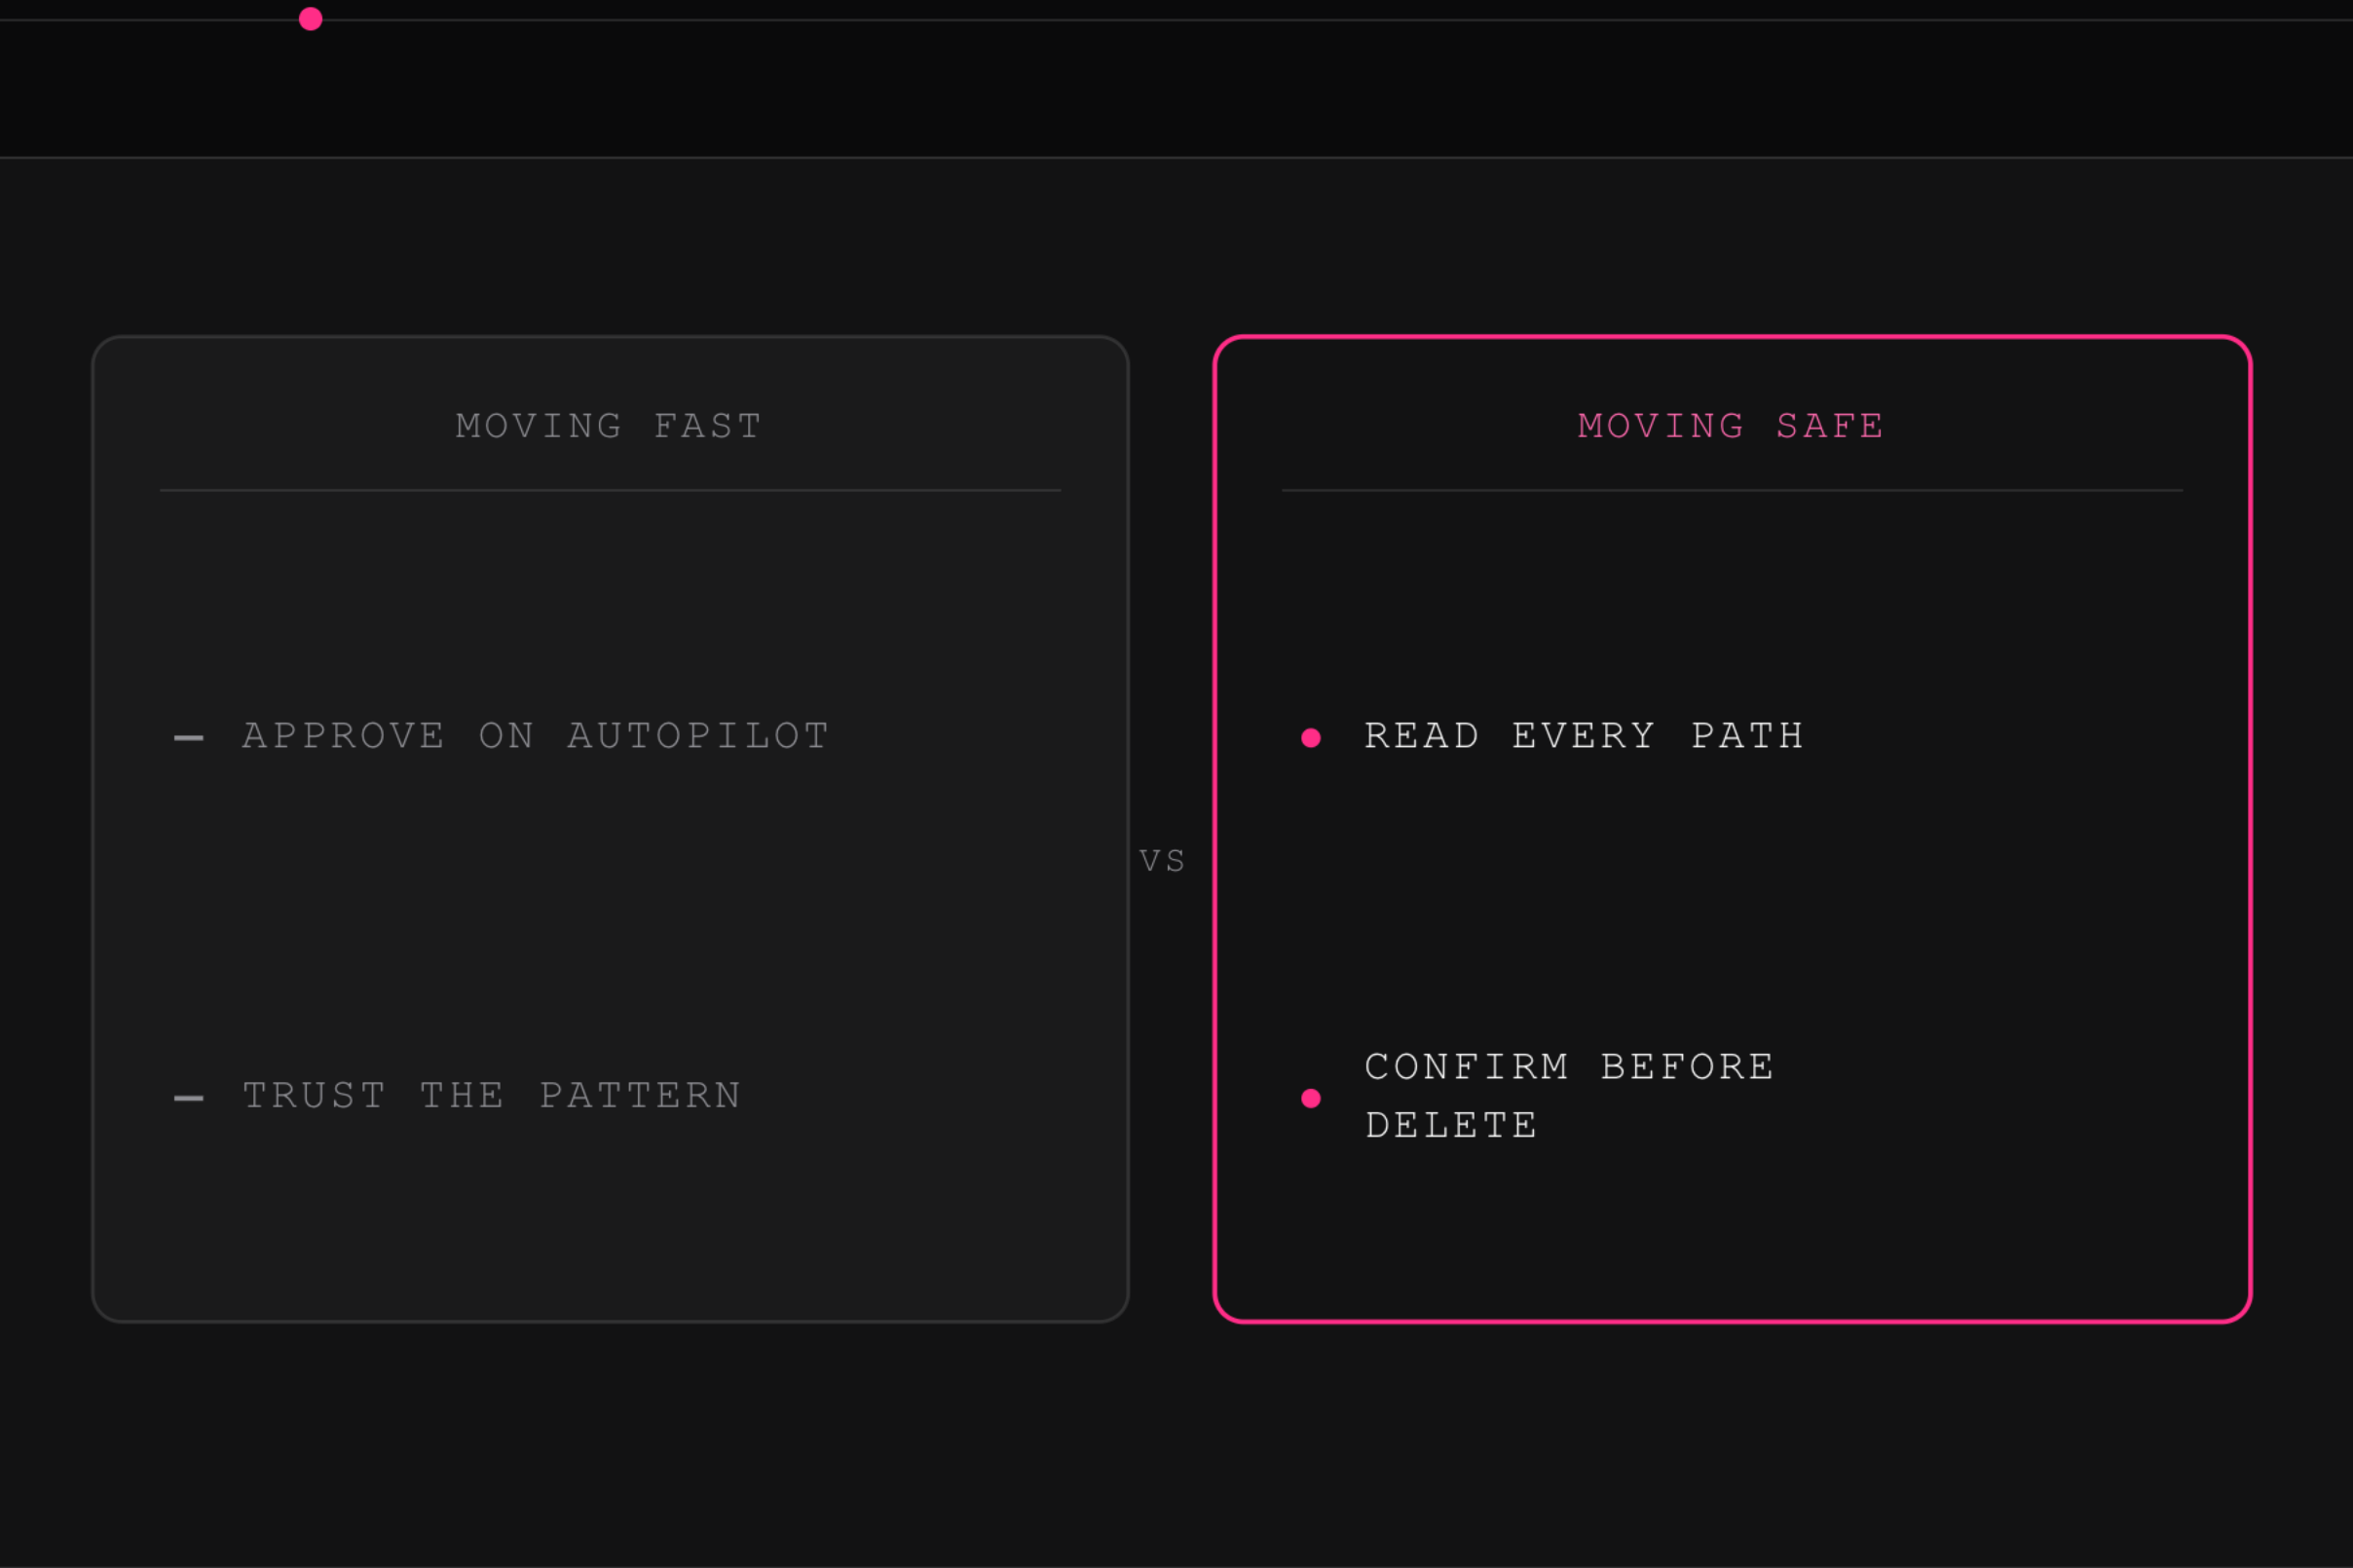

FIG. 2 · VERYDIAN

03 · the guardrail

What Claude Code's Auto Mode Actually Checks

It blocks edits to session transcripts. It asks before running `rm -rf` on anything it can't resolve from context.

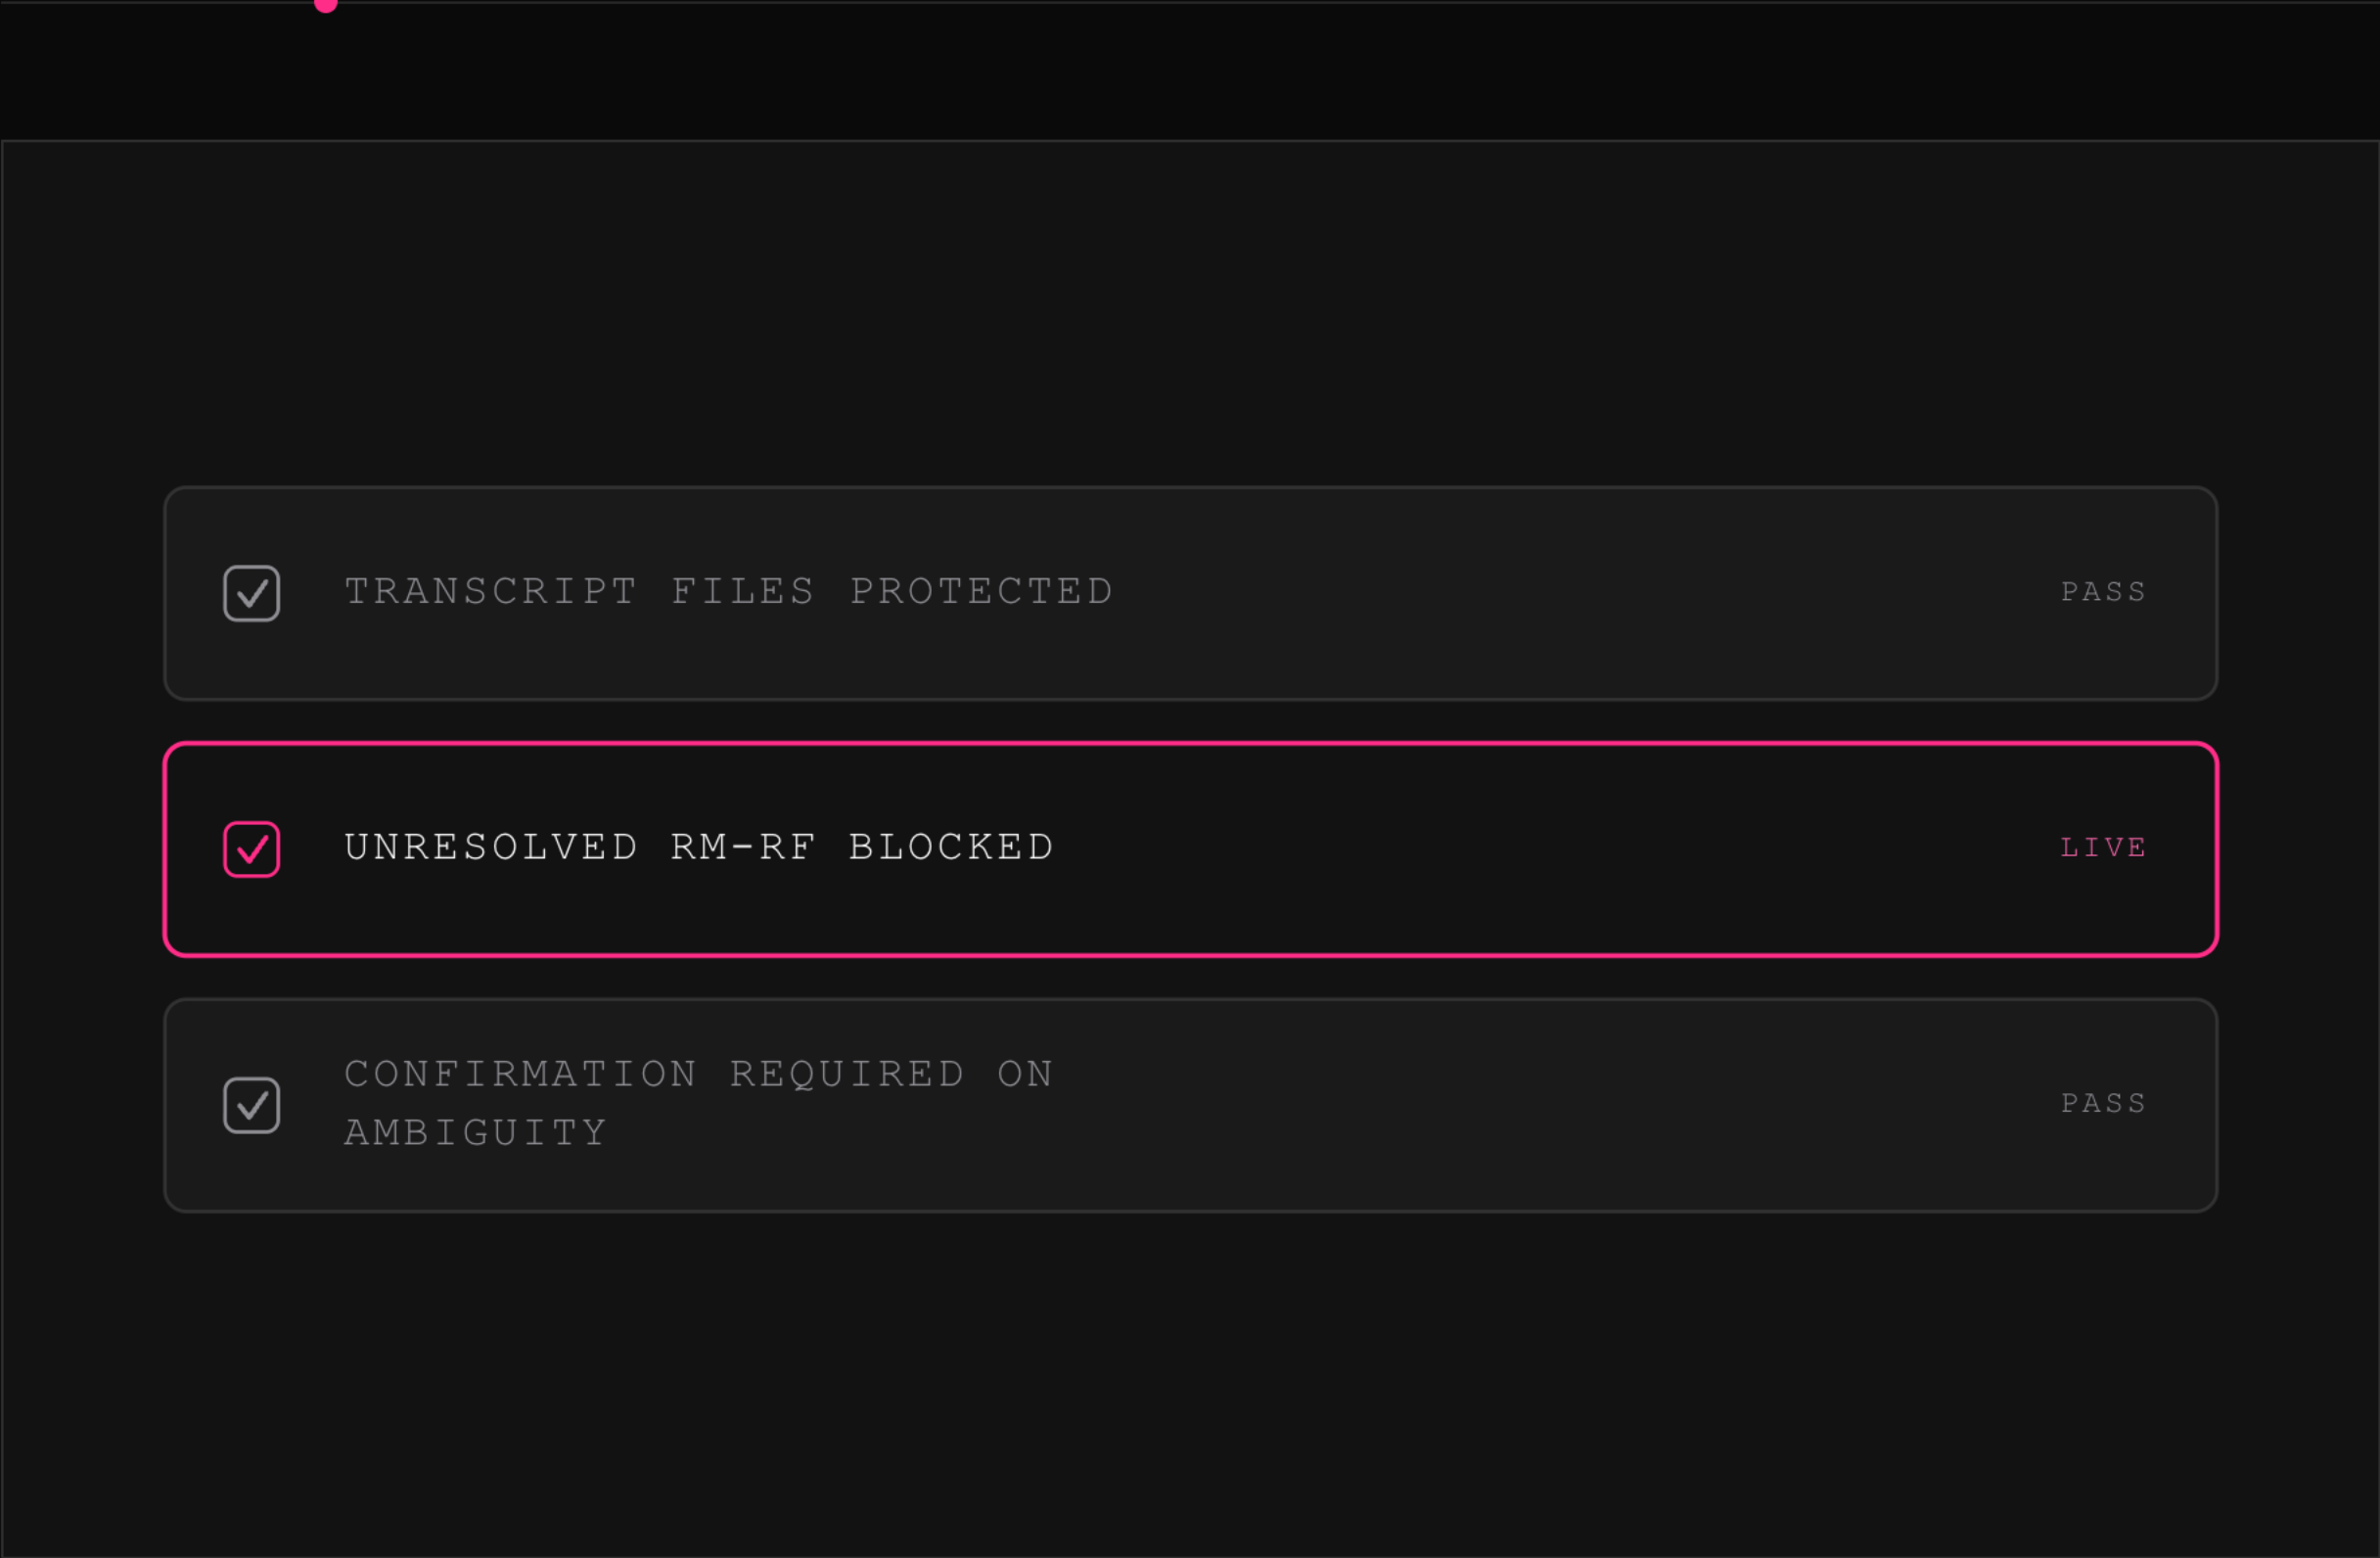

FIG. 3 · VERYDIAN

04 · before, not after

The Rail Fires Before The Damage, Not After

Most safety features log what already happened. This one stops the command before it runs.

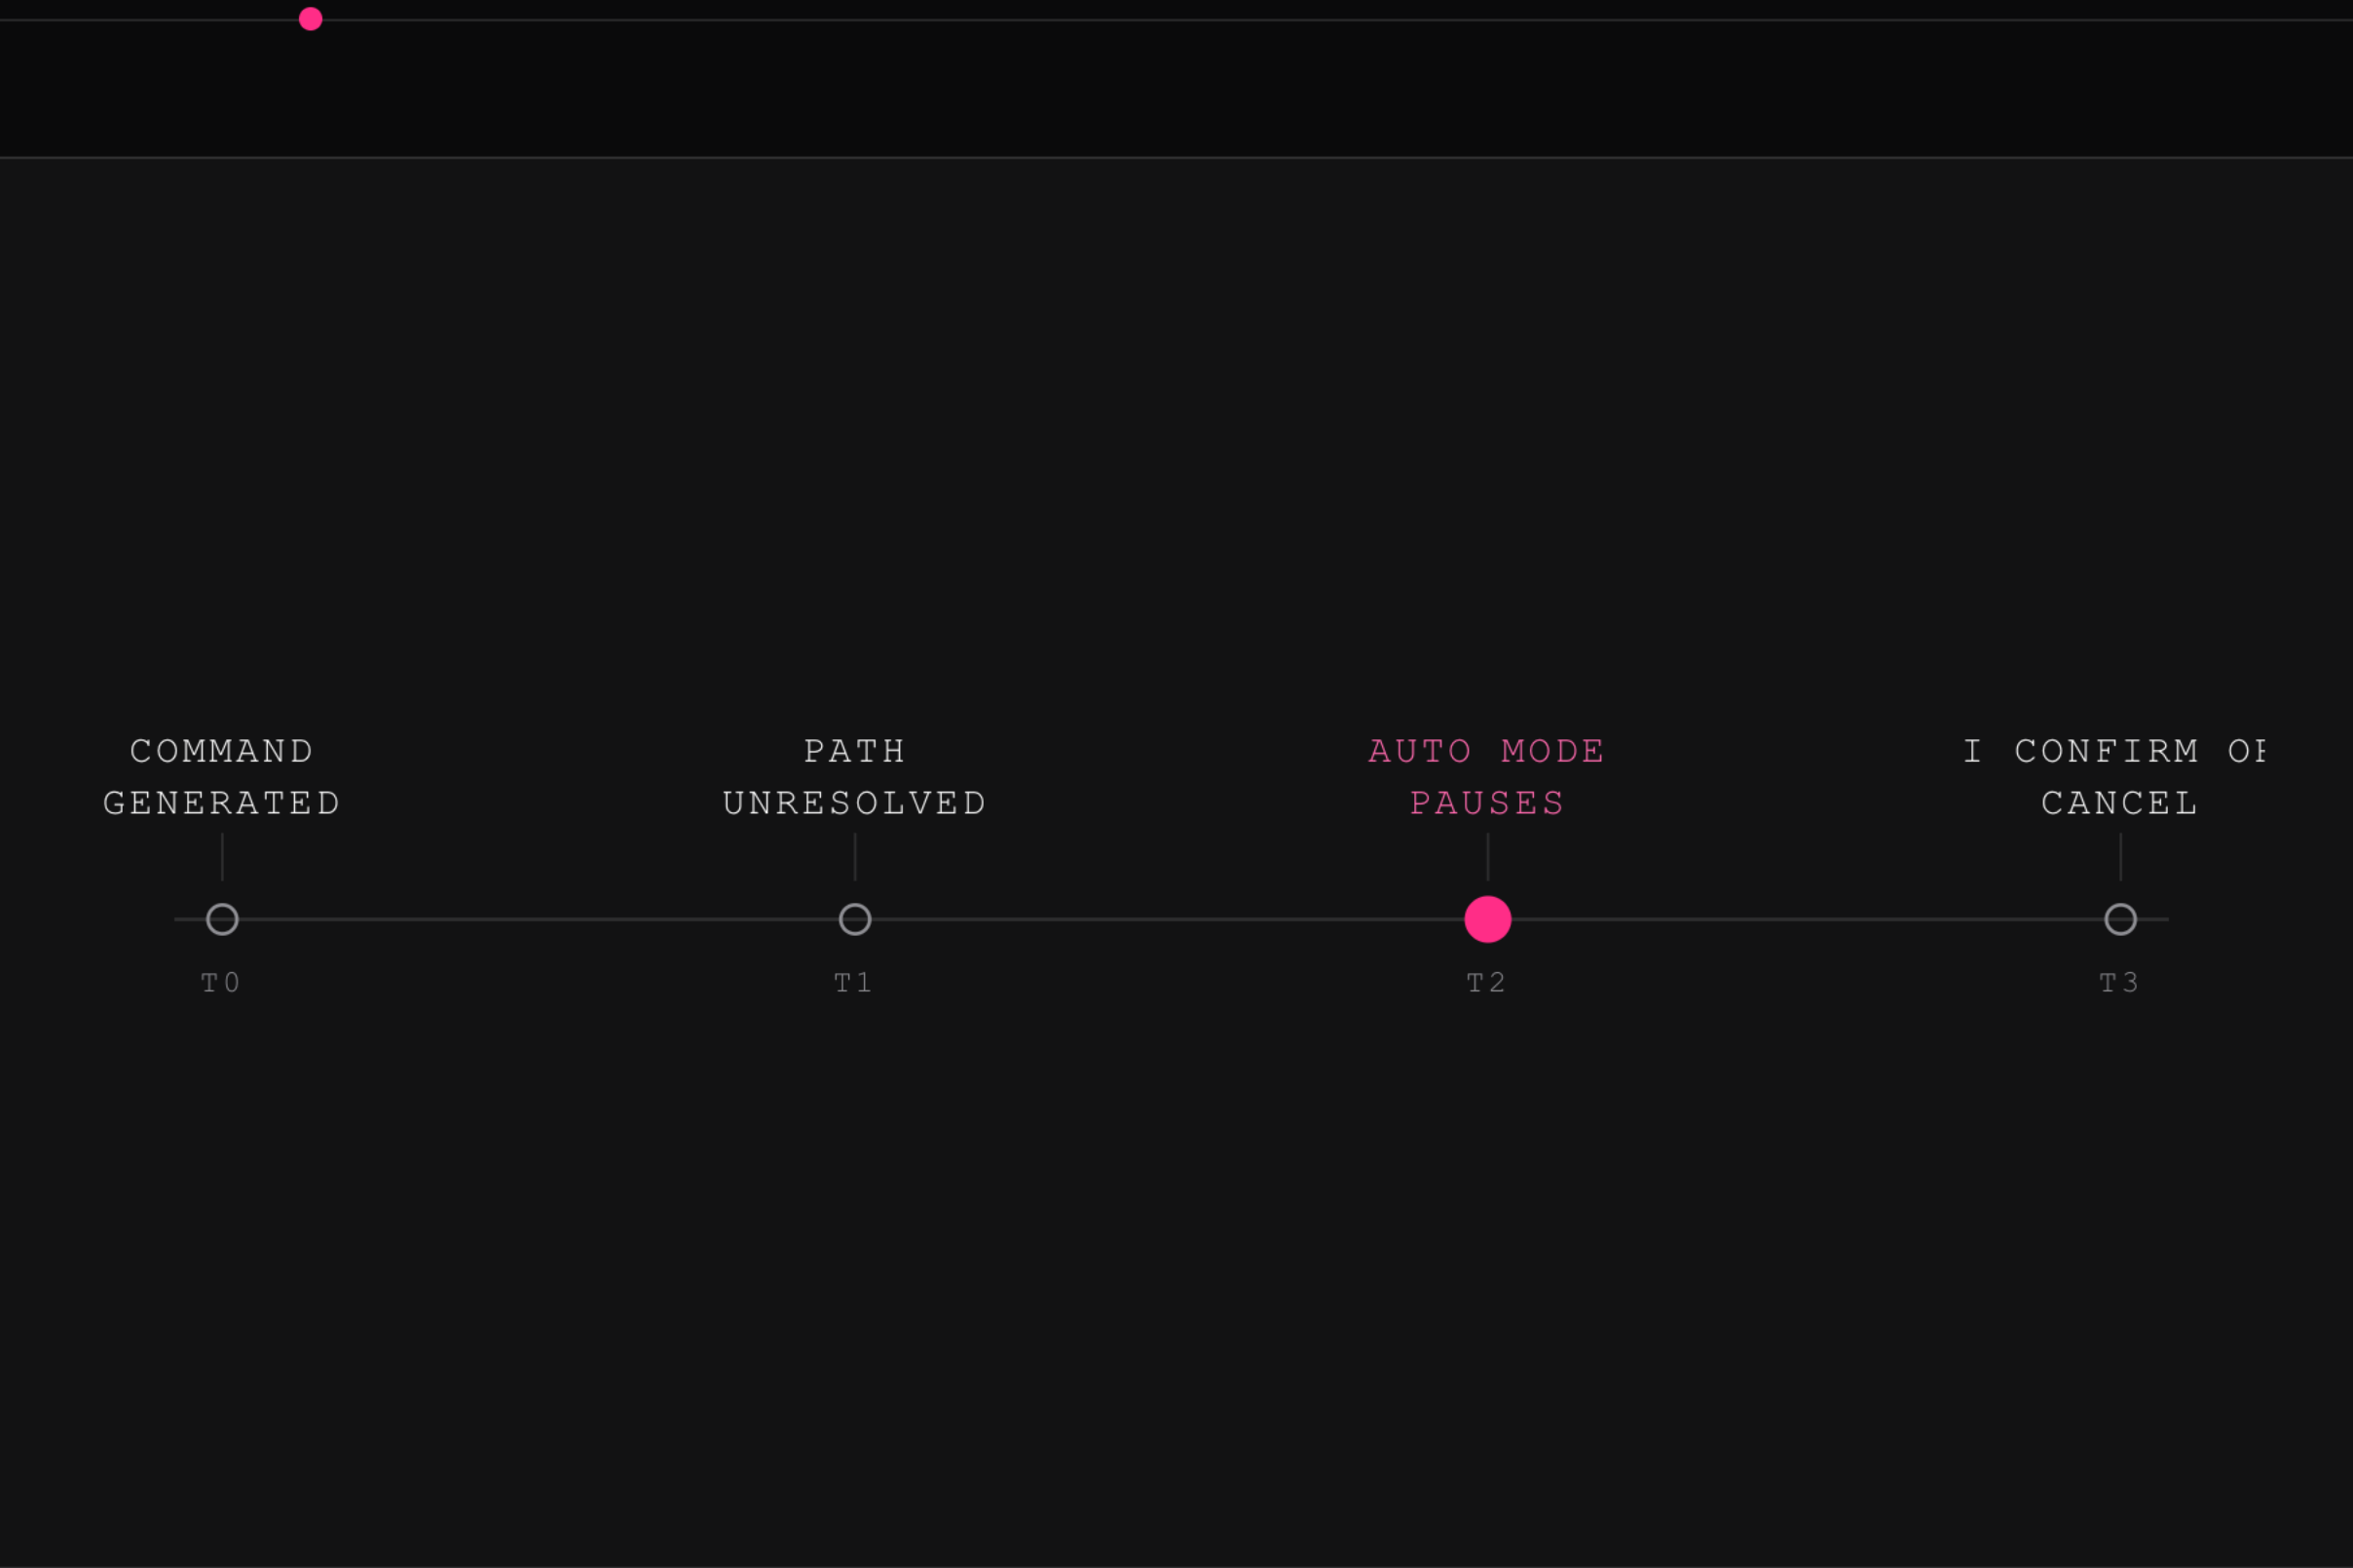

FIG. 4 · VERYDIAN

05 · the rule

Zero Tolerance Is Not A Vibe, It's A Rule

One unresolved variable, one pause, every time. No exceptions for how confident the agent sounds.

1 unresolved path • 0 EXCEPTIONS
= 1 MANDATORY PAUSE

FIG. 5 · VERYDIAN

I Don't Trust Autonomy Without Friction

Speed without a brake isn't infrastructure, it's a liability.
