

CODEx + ASTRA

I Gave Codex A Million Tokens. Nothing Changed.

The context window got bigger. The bottleneck was never the window.

OPEN THE LEDGER

ENTRY 02 · CONTEXT WINDOW

The Number That Shipped This Month

1.05 million tokens, in Codex CLI, on GPT-6 Astra, phased rollout starting September.

RECORDED SYSTEM

VERYDIAN

ENTRY 03 · THE REAL TEST

I Ran The Same Messy Task Through It

Scope loosely, prompt, execute, review the sprawl. Same steps I'd have skipped scoping before.

RECORDED SYSTEM

VERYDIAN

ENTRY 04 · THE FAILURE MODE

What A Bigger Window Actually Lets Slide

More room to wander before the model looks wrong. That's harder to catch, not easier.

RECORDED SYSTEM

VERYDIAN

\$

CONTEXT: 1.05M TOKENS AVAILABLE

\$

SCOPE: LEFT LOOSE

>

OUTPUT: DRIFTED, TOOK LONGER TO CATCH

ENTRY 05 · BEFORE VS AFTER ASTRA

What Changed, What Didn't

The model's capacity grew. The discipline it takes to prompt it well stayed exactly the same.

RECORDED SYSTEM

VERYDIAN

GOT BIGGER

— CONTEXT WINDOW

— MODEL CAPACITY

VS

STAYED THE SAME

• TASK SCOPING DISCIPLINE

• DIFF REVIEW HABIT

Bigger Context Isn't A Substitute For Scope

Try Astra if you're on Codex. Just don't skip the thinking part.
