Claude Code Removed A Limit I Engineered Around _

Three months building a workaround. One changelog entry made it disappear.

RUN SESSION _____

arhem@verydian:~/month one to three\$ step 2

How The Workaround Actually Got Built

Hit the cap running parallel agents. Spent three weeks building a queue to live inside it.

```
arhem@verydian:~/hidden architecture$ step 3
```

The Workaround Became Four Layers Deep

Spawn cap at the bottom. Rate limiter, retry logic, and a queue manager stacked on top of it.

arhem@verydian:~/before and after\$ step 4

What The Cap Removal Actually Exposed

The workaround didn't disappear when the constraint did. It just stopped having a reason to exist.

STDOUT

WITH THE CAP

— MANUAL QUEUE

— RATE LIMITING

VS

AFTER REMOVAL

● DEAD CODE

● NO OWNER

```
arhem@verydian:~/the_fix$ step 5
```

What I Did About It Instead

Audited every path the queue touched, stripped the dead code, let the pipeline run the way it was meant to now.

STDOUT

Go Check Your Own Workarounds

The constraint you engineered around might already be gone.
