WHERE MOST PROJECTS DIE

02 ·

No Monitoring at the Agent Level

Output degrades. Nobody notices until a client does. Without observability, you're flying blind from day one.

SYS.SIGNAL

03 ·

Ownership Is Ambiguous. So Nobody Owns It.

AI built it. Ops didn't. IT won't. When it breaks, everyone looks sideways. Accountability gaps kill production agents.

FOCUS.NODE

04

Legacy Integration Debt Nobody Audited

The pilot ran against a clean API. Production data lives in a 2014 CRM with deprecated endpoints. Nobody checked before shipping.

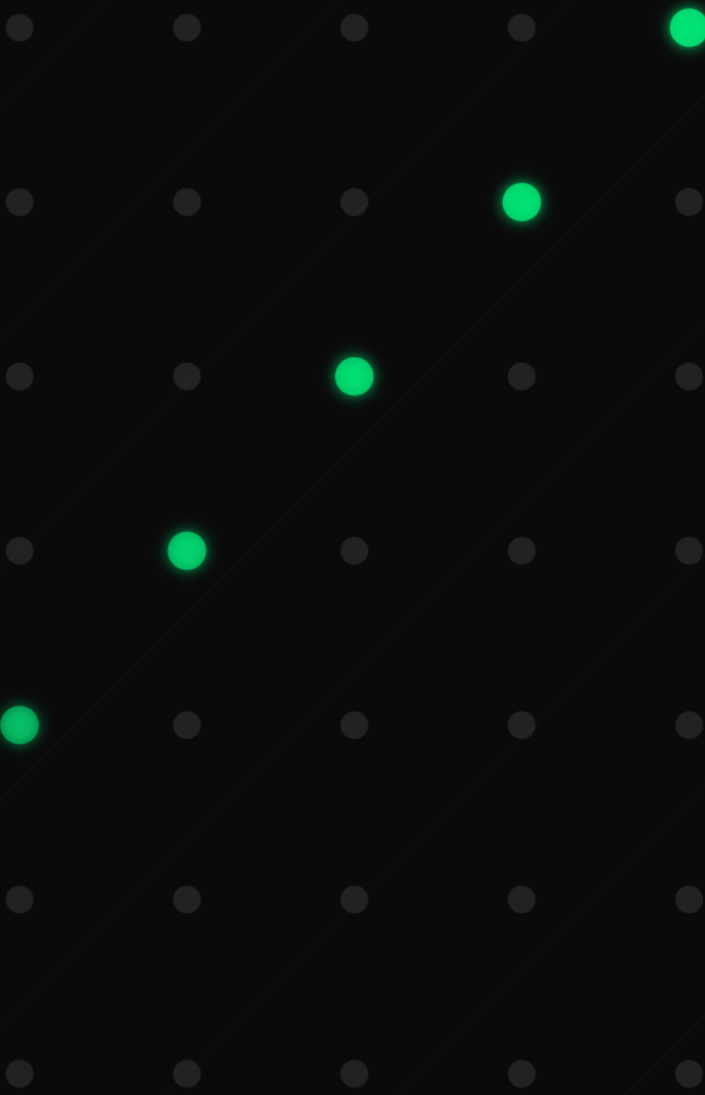

SEQUENCE

05 ·

Volume Breaks What the Pilot Couldn't See

50 records worked fine. 5,000 a day surfaces
edge cases the pilot never hit. No stress test
means the failure is a surprise.

DATA.PATTERN

06 ·

Generic Output Means the Domain Data Wasn't There

Company-specific context lives in Slack and people's heads. Without it, the agent outputs what any generic model would. The client wanted more.
