

↓ FRAMEWORK

300% ROI From AI Automation. Most Companies Miss It.

The gains are real. The distribution is brutal.

01 Your team copies data between systems daily

02 Decisions wait on a person, not data

03 You've automated tasks but not workflows

IF YES TO ANY →
You need an agent, not another app.

2

75% of Gains Go to 20% of Deployments

The rest are running automation that's marginally better than before. They measure it, report it, and wonder why the numbers don't match the case studies.

SYS.NODES

3 The High-ROI Pattern: Redesign, Then Automate

Top performers asked: if we built this from scratch today, how would we design it? Then they scrapped the original. The question is uncomfortable. That's why most skip it.

COMPARISON

4 The Low-ROI Pattern: Automate the Existing Workflow

Map the manual steps. Drop AI on top. The inefficiency is preserved. The automation makes it faster. Fast inefficiency isn't a redesigned operation.

DECISION.MAP

5 Same Problem,
Two Designs,
Different Outcomes

Low-ROI: AI flags exceptions, human resolves. High-ROI: AI resolves 80% autonomously, humans touch only edge cases. Same domain, different ROI entirely.
