

STACK ECONOMICS

171% ROI is real and also misleading

The stat is true. The way vendors use it to sell you agents is not.

SWIPE

02 · the data

The number is real, and narrow

171 to 276 percent returns show up in documented agentic deployments, Coupa's procurement case among them.

FIG. 2 · VERYDIAN

03 · concentration

It clusters in four process types

Invoice matching, vendor onboarding, renewal tracking, compliance checks.
That's the whole list.

FIG. 3 · VERYDIAN

04 · the pattern

Three traits every winning process shares

Already documented. Already repeatable. Already costing measurable money before an agent touches it.

FIG. 4 · VERYDIAN

05 · the split

Only a slice of candidates return real ROI

Repeatable, documented, already-broken processes capture the return.
Everything else just looks impressive.

FIG. 5 · VERYDIAN

Find the broken repeatable process first

The agent is the easy part after that.
