

33 Workflows Saved Vodafone 5,000 Person- Days

No flagship agent. Just narrow automations stacked inside
a team that stayed intact.

SWIPE

Four Layers, One Existing Team

SOC triage, onboarding, engineering, content ops. Each automation sits inside a job someone already owns, not a system meant to replace them.

■ NO. 03 · HARD NUMBERS

5,000 Person-Days, £2.2 Million Avoided

Since August 2024, Vodafone's workflows have saved five thousand person-days and avoided £2.2 million in costs, according to n8n's own case study.

Small Wins Compounding Since 2024

Workflows didn't launch at once. They stacked one at a time, and by 2025 the pace alone was saving roughly £300,000 a month.

■ NO. 05 · THE REAL PATTERN

One Big Bet Or Many Small Ones

A flagship agent replaces a team and becomes the single point of failure. Stacked workflows keep the team and compound instead.

FLAGSHIP AGENT

- REPLACES TEAM
- SINGLE BET

VS

STACKED WORKFLOWS

- TEAM STAYS
- COMPOUNDS

Want Automations That Actually Compound

This is the pattern I build at Verydian.
