

Claude Code vs. Codex: use both. Here's how.

The practical split enterprise teams use in 2026

PLAYBOOK.NODE

02

Claude Code: for ambiguous, planning- heavy work.

Architecture, system design, fuzzy requirements.
It reasons through tradeoffs. It's a collaborator,
not a compiler.

ARC.MESH

03

Codex: for parallelizable, well- defined execution.

40 unit tests. 12 files refactored to a new schema.
TypeScript migration. Defined inputs, batch
output, fast.

HEX.CLUSTER

04

Phase 1: figure out what to build with Claude Code.

Architecture, interfaces, resolved ambiguity. Do this once. Get it right.

WAVE.FORM

05

Phase 2: execute the defined tasks with Codex.

Scale the implementation. Parallelize. Move fast on work that's already understood.
