

HYBRID GTM

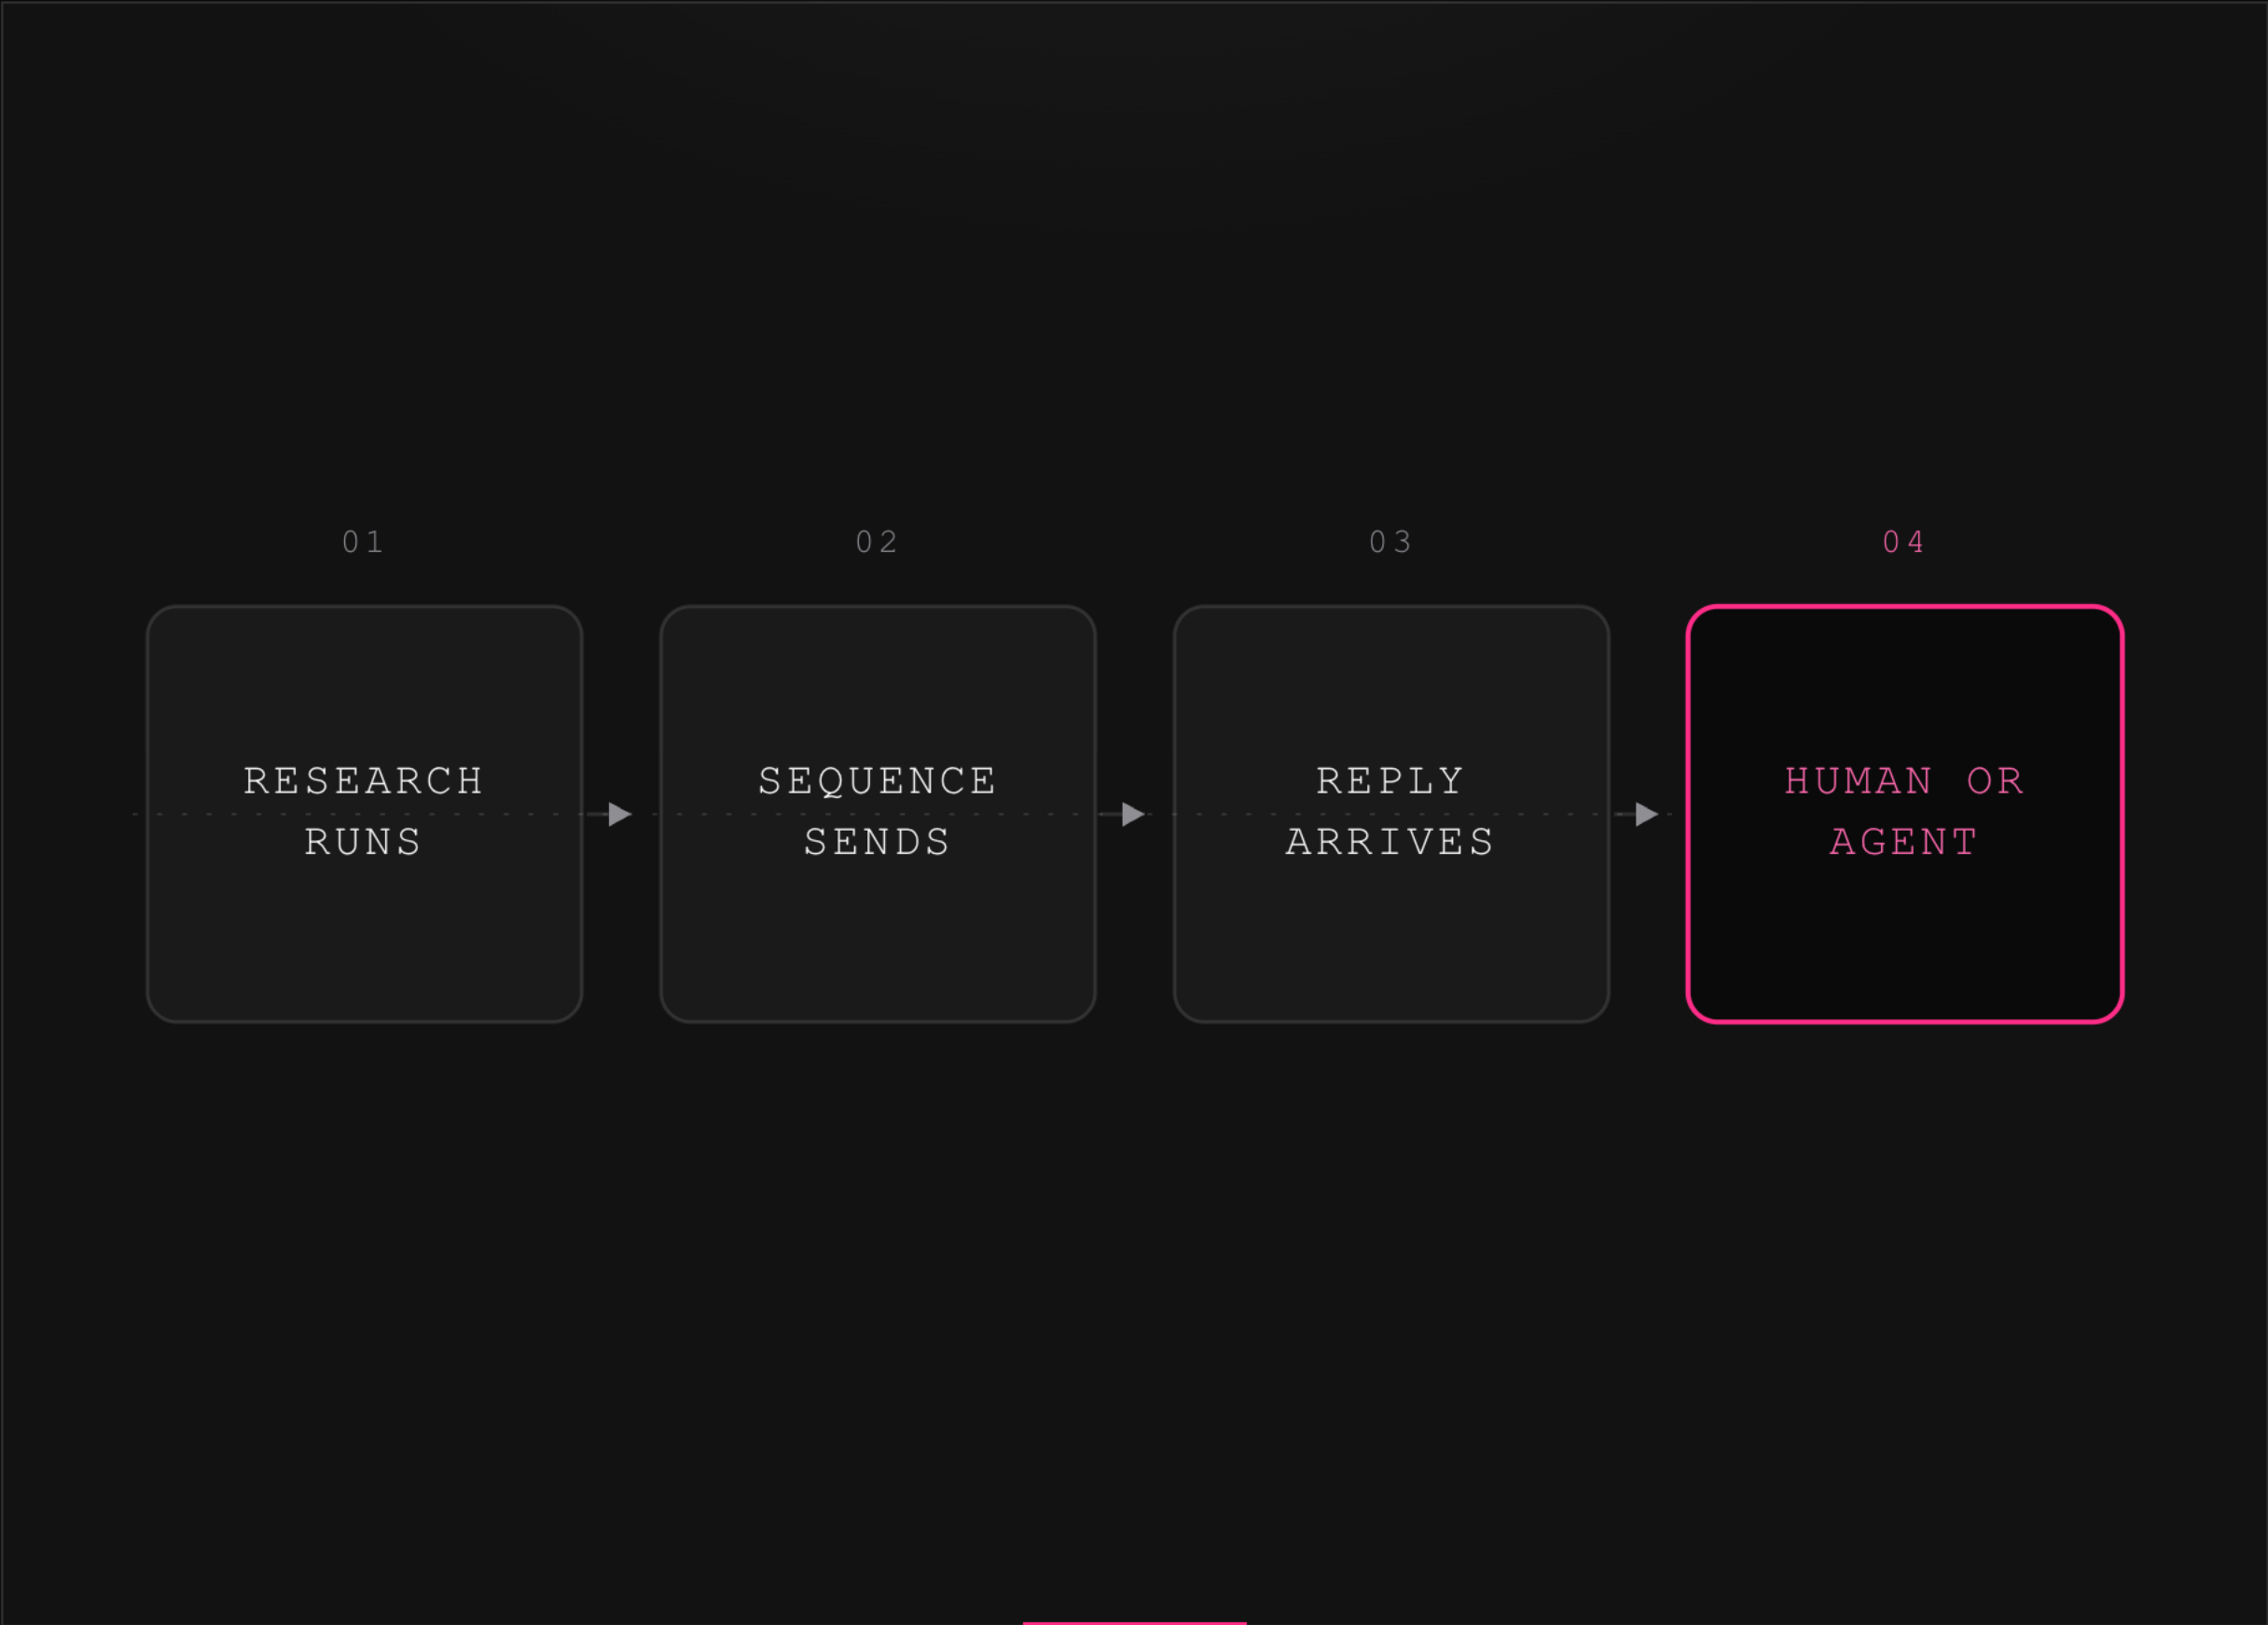

The Outreach Engine That Knows When to Shut Up

The agent isn't the win. Knowing exactly where to stop it is.

ENTER

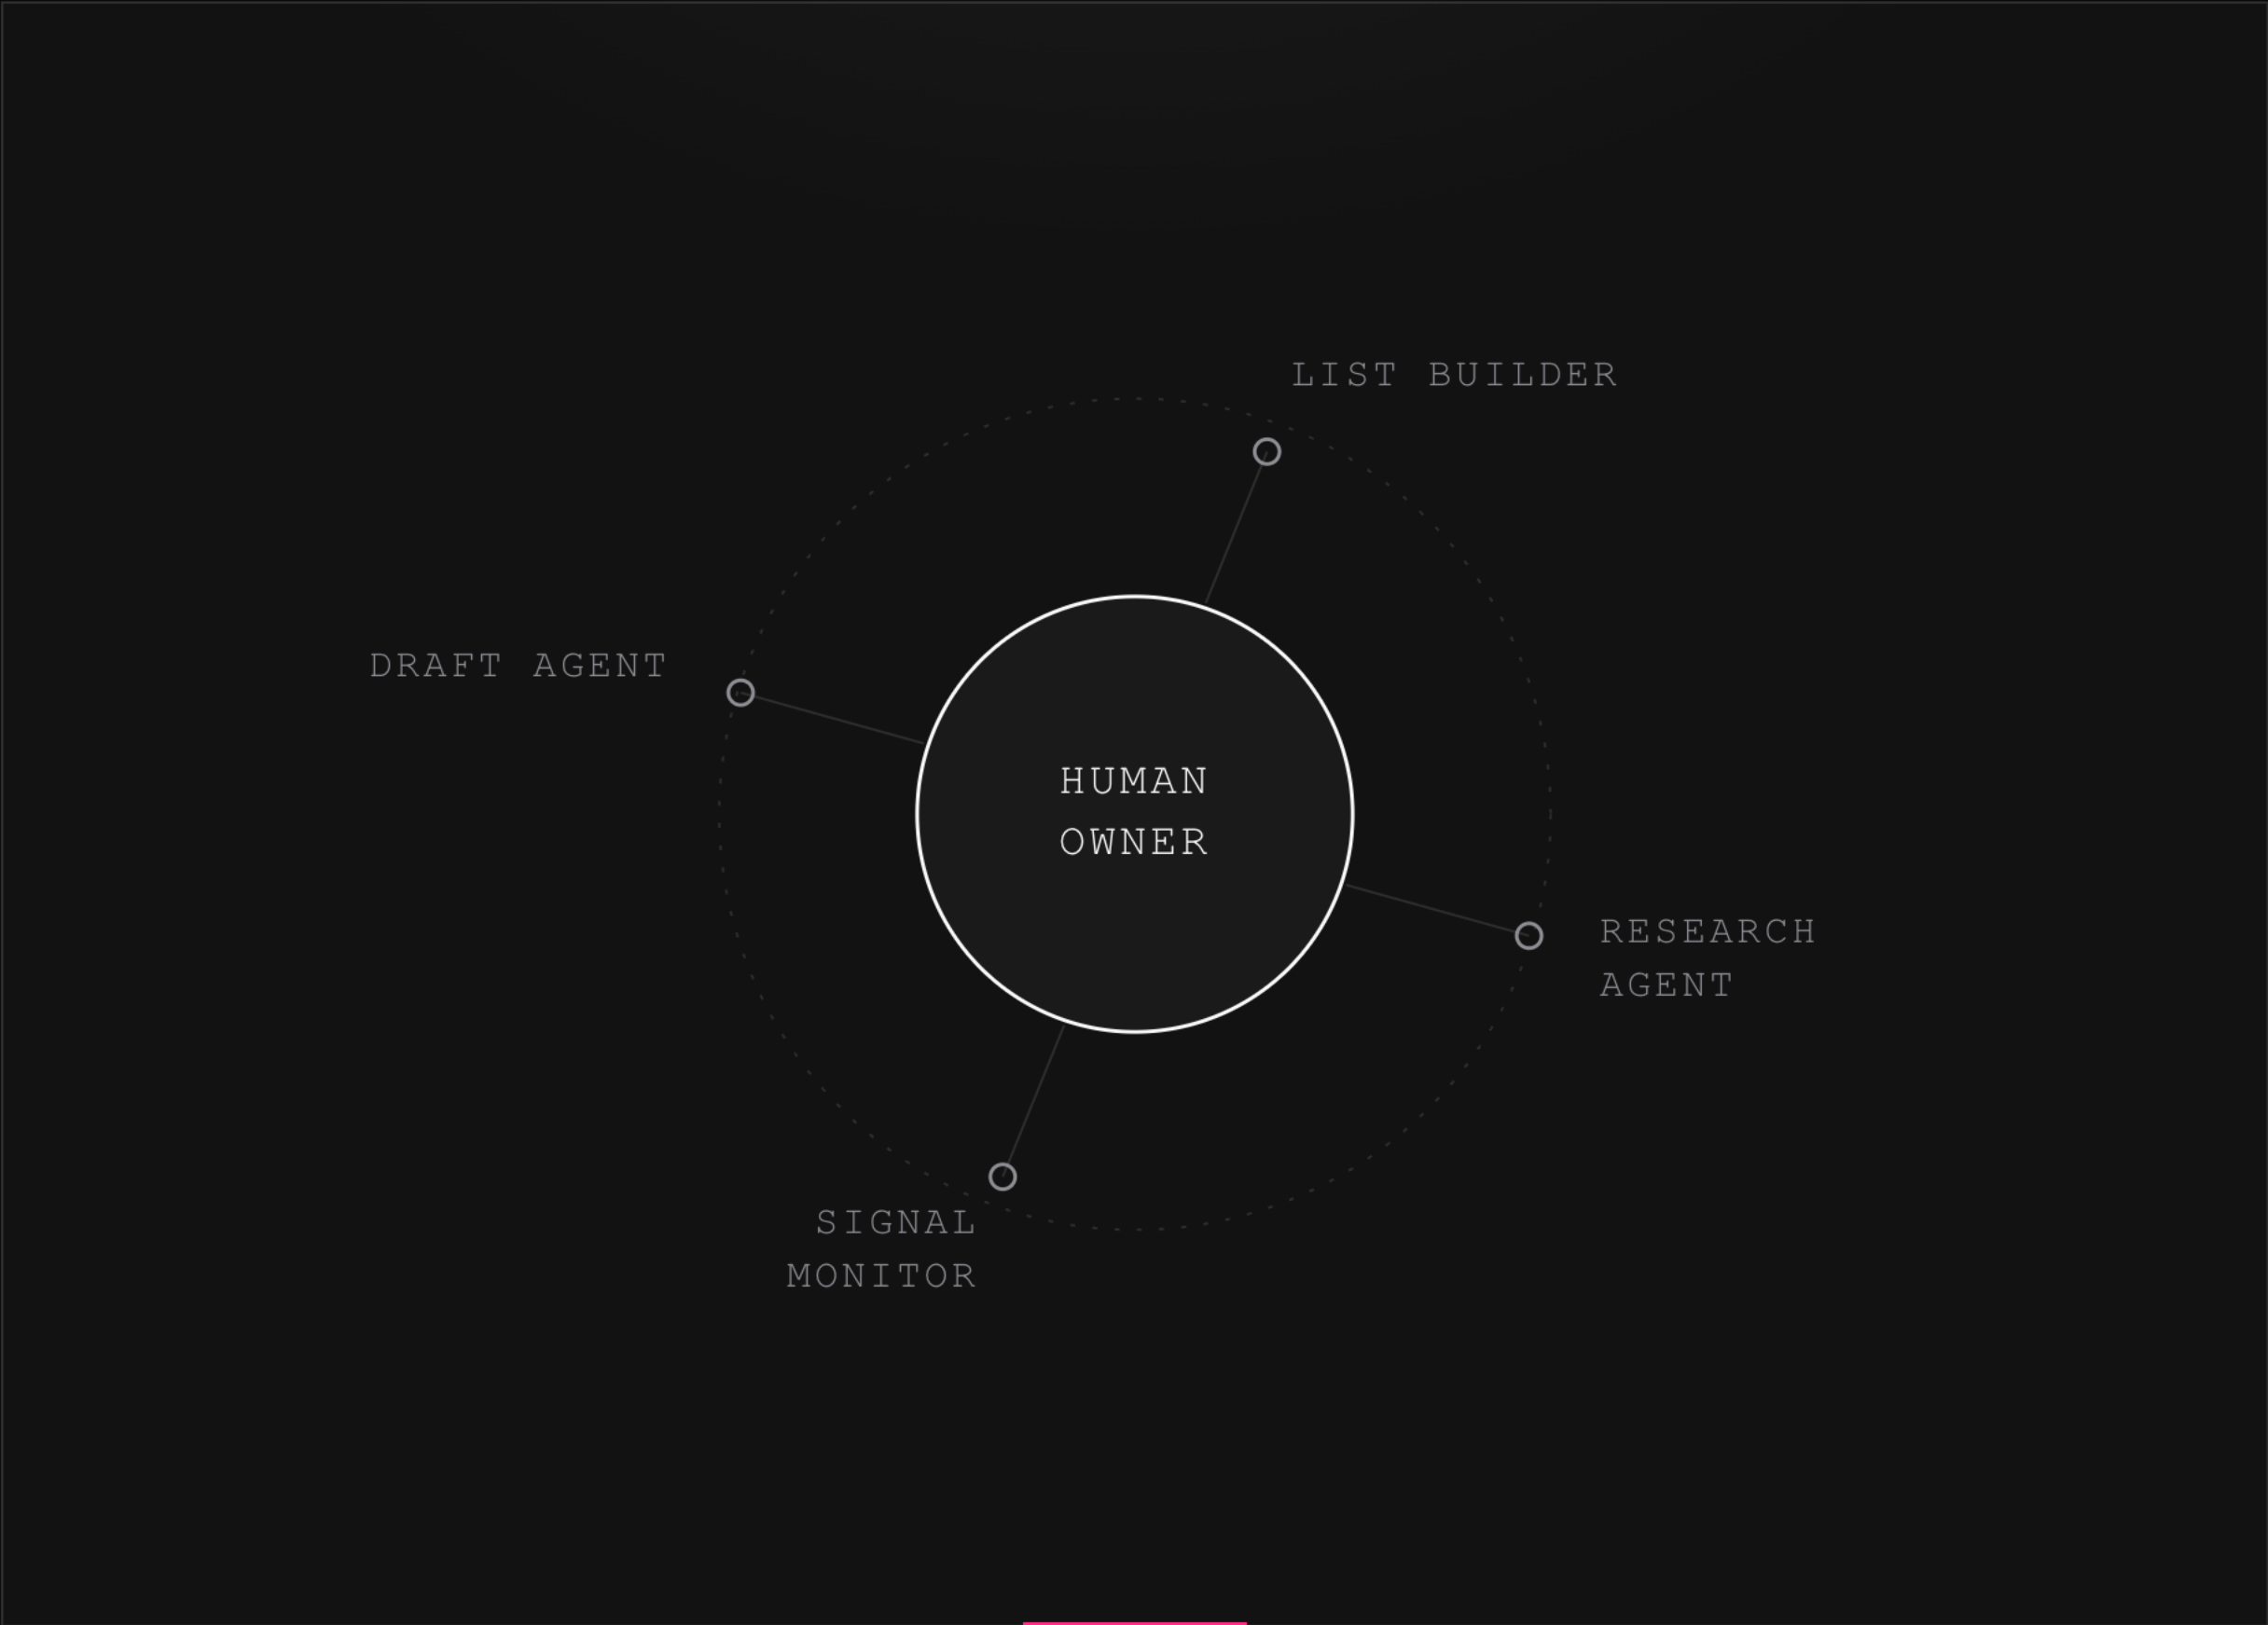

● EXHIBIT 02 · AI SDR ADOPTION

What 41 Percent of B2B Teams Are Running Now

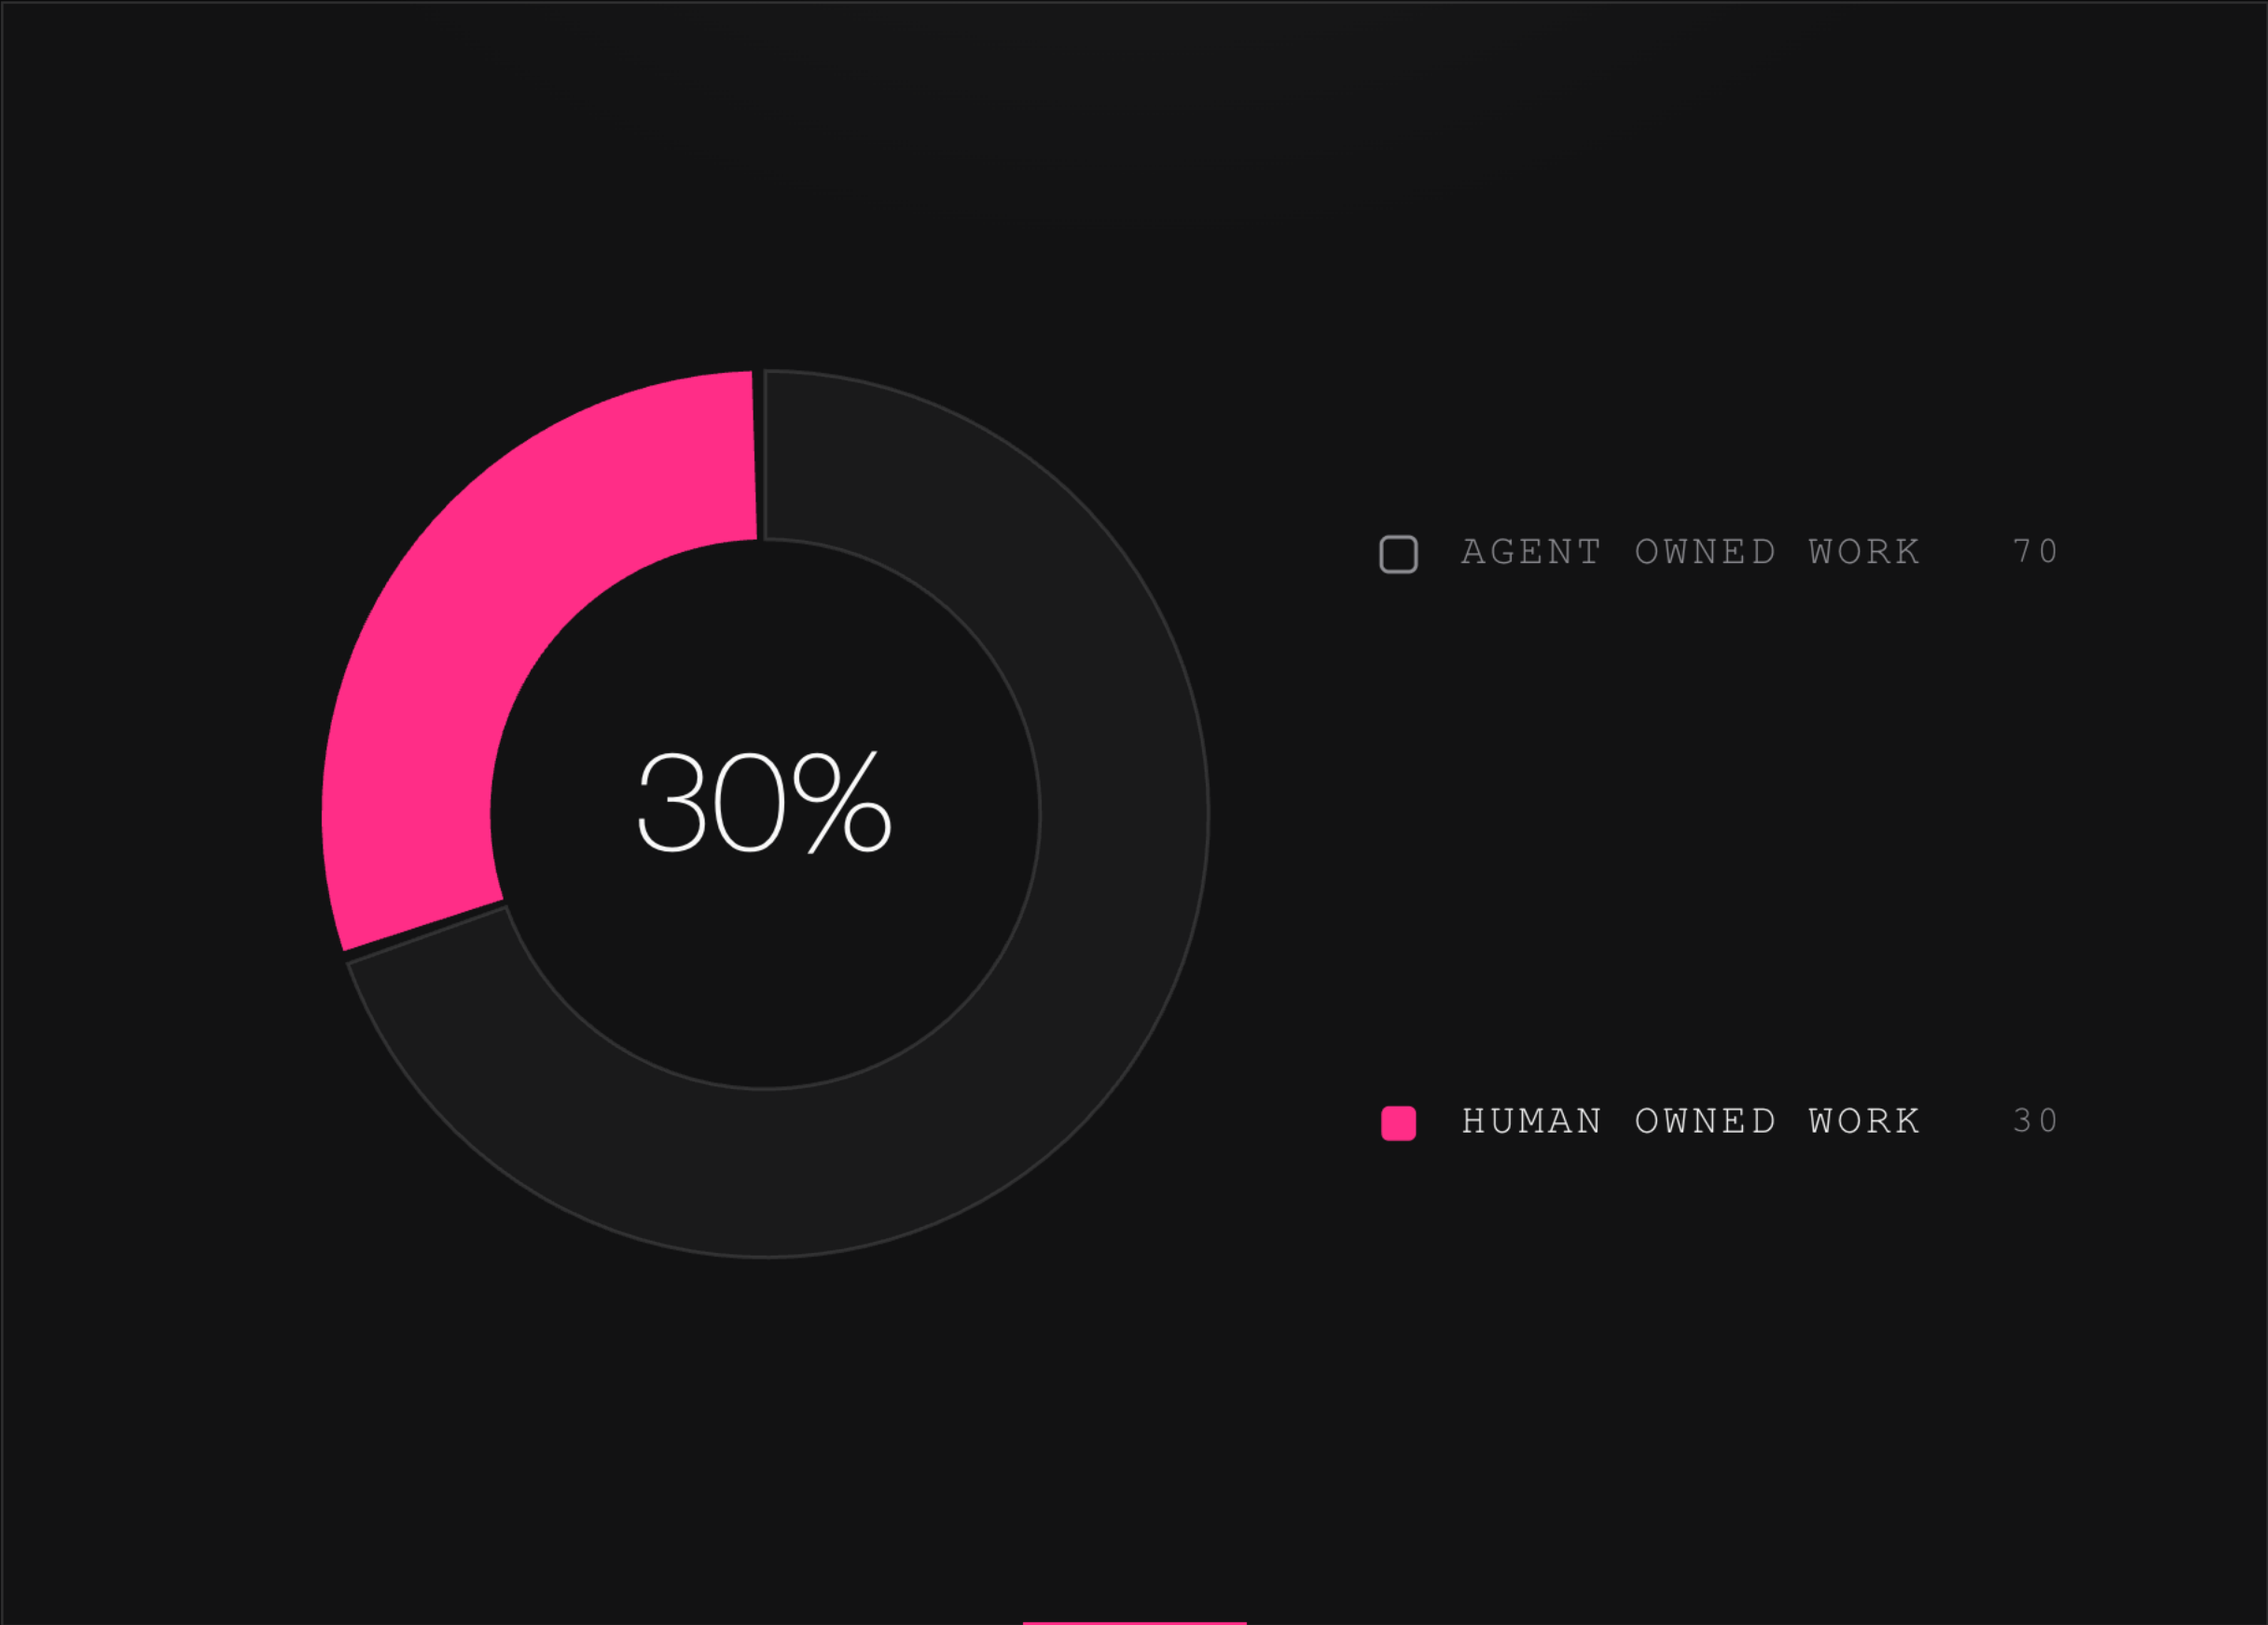

Forty one percent of enterprise teams run an AI SDR in production, up from 3 percent two years ago. Most still skip the handoff rule.

● EXHIBIT 03 · POD STRUCTURE

The Pod Isn't One Agent. It's a Hub of Roles

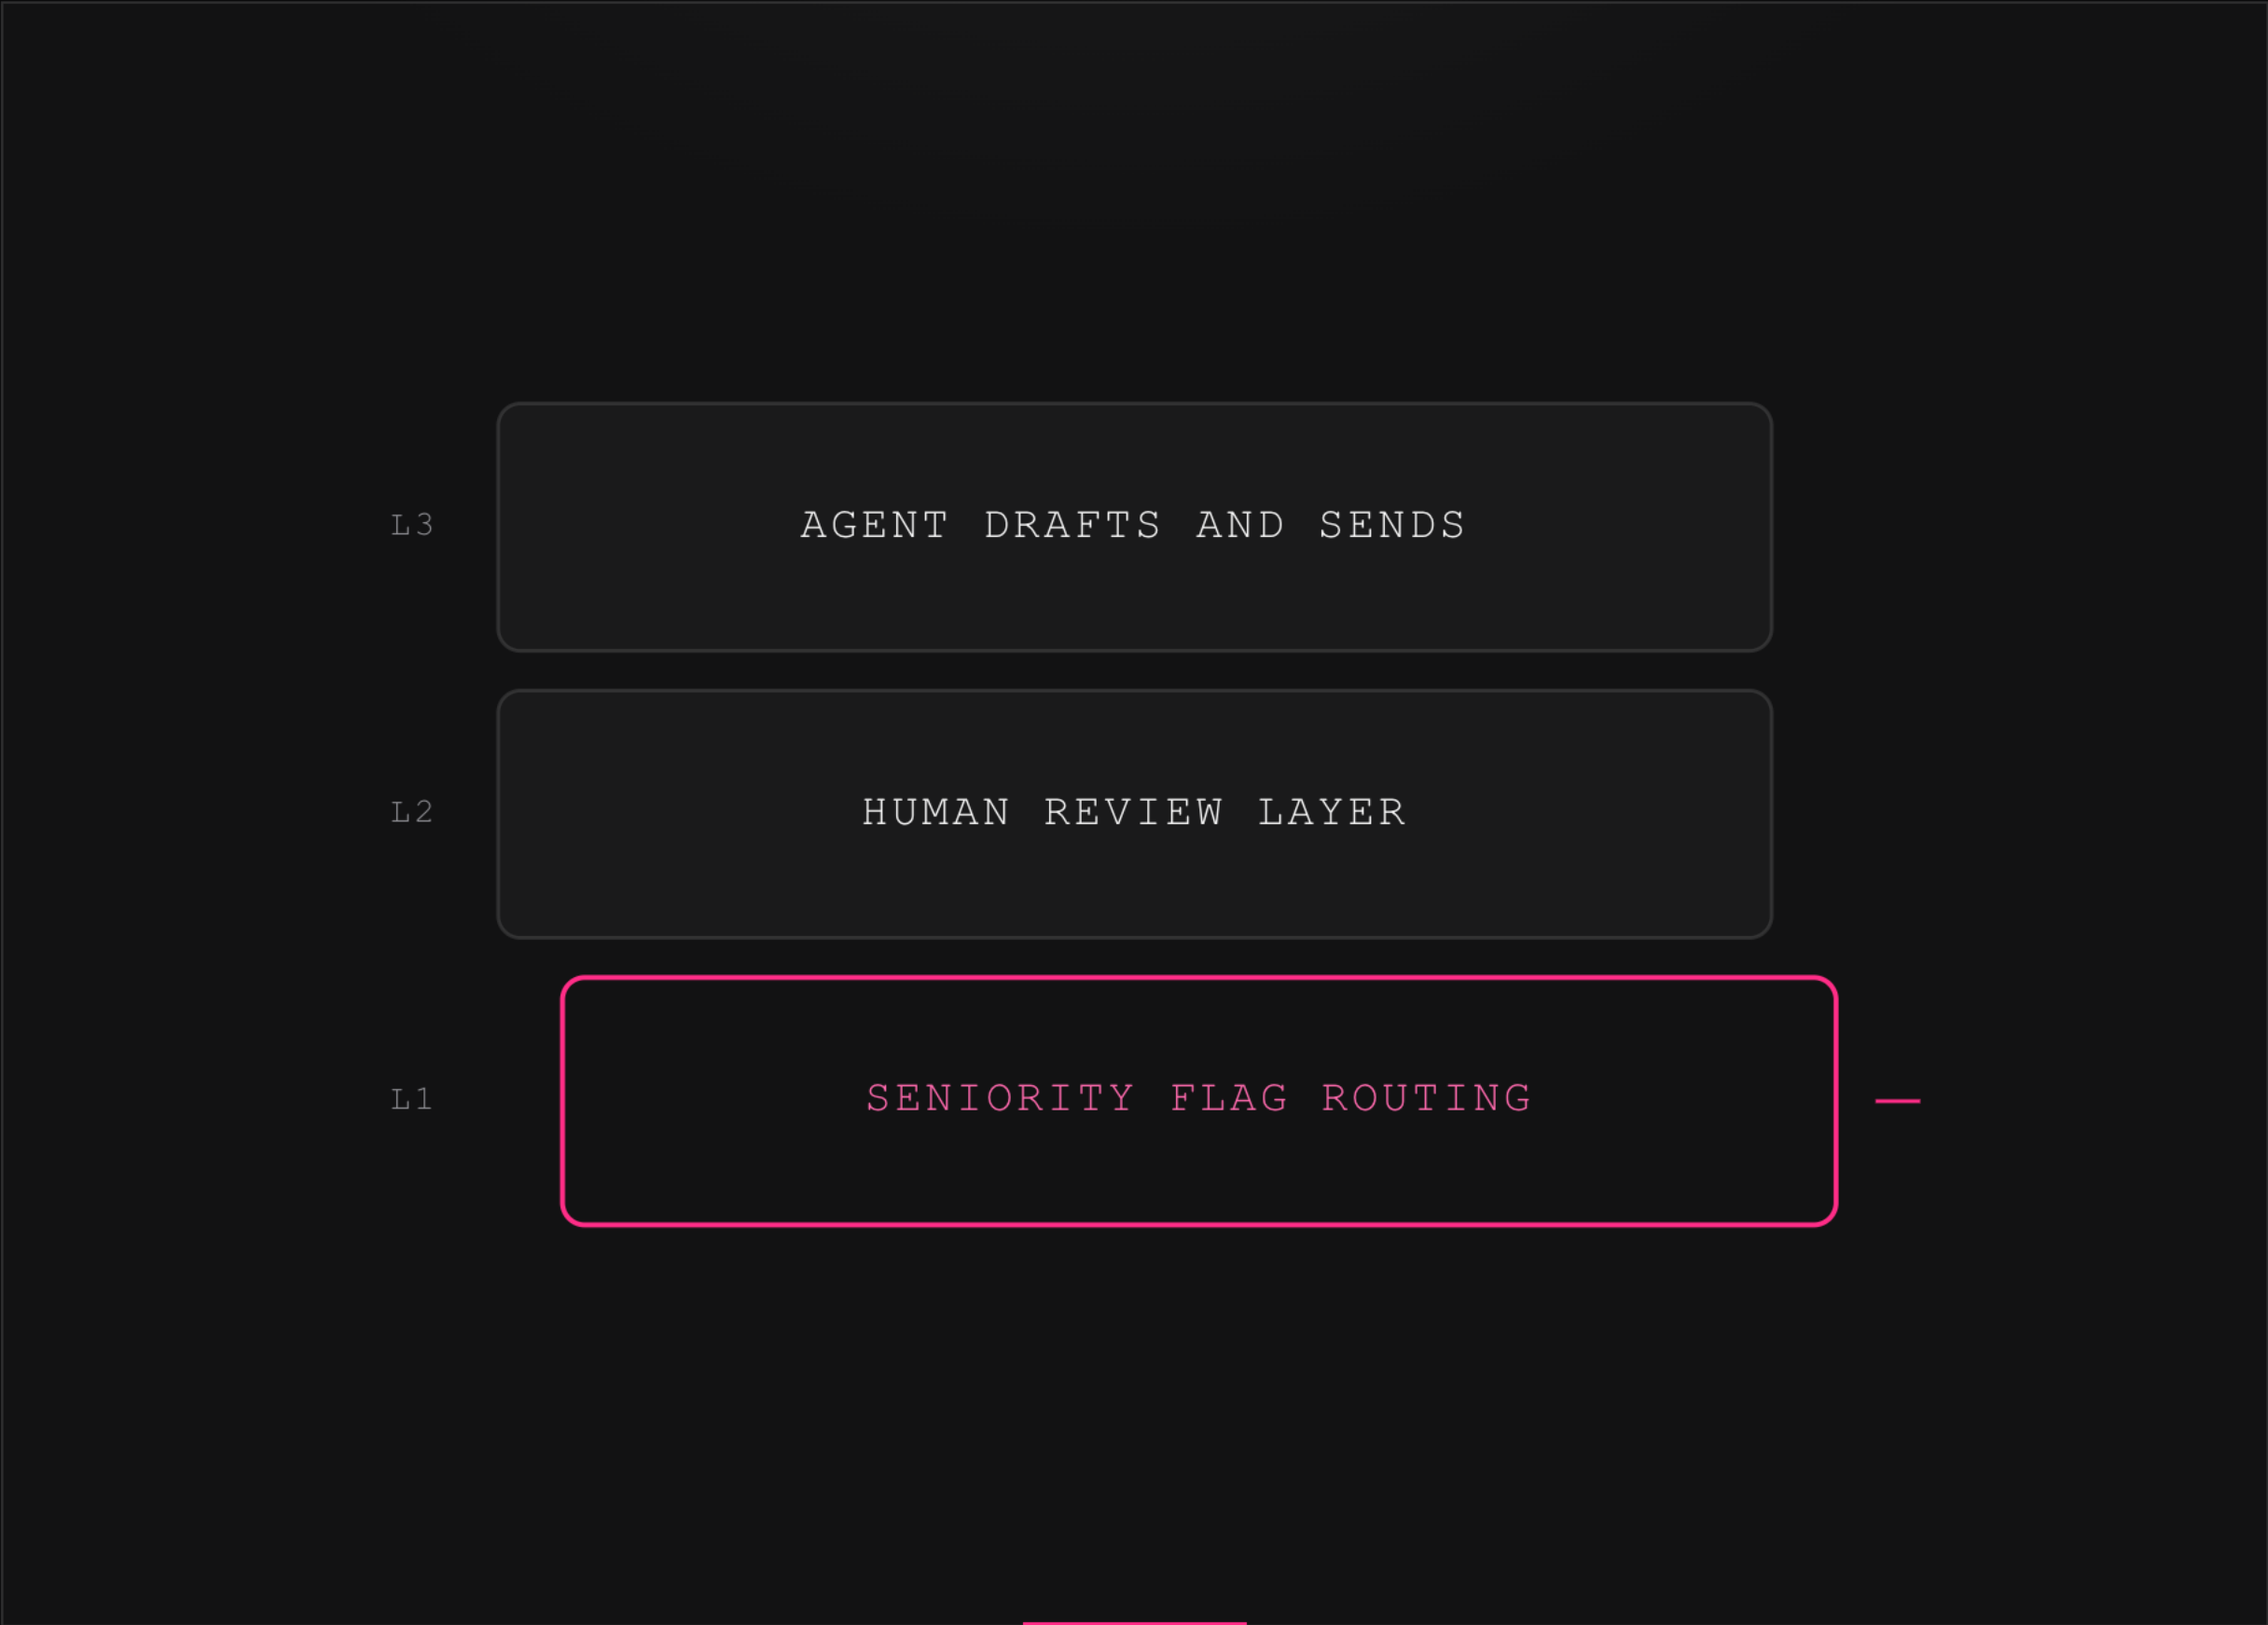

A hybrid pod runs research, monitoring, and drafting on the agent, with a human sitting at the center of every senior-level decision.

● EXHIBIT 04 · WORK ALLOCATION

Where the Work Actually Splits Between the Two

The agent owns volume: research, monitoring, first drafts. The human owns judgment, anything senior enough to sign gets a real person.

● EXHIBIT 05 · HANDOFF STACK

The Layers That Keep the Handoff From Failing

Agent output sits at the bottom, human review sits above it, and a seniority flag decides which replies never reach the agent again.

☒	FLAG SENIORITY PRE-SEND	PASS
☒	ROUTE SENIOR REPLIES TO HUMAN	PASS
☒	REMOVE AUTO ESCALATION	PASS
☒	LOG EVERY HANDOFF	LIVE

● EXHIBIT 06 · HANDOFF RULE

The Handoff Rule That Protects the Big Deals

Flag the buyer's seniority before the first send. Route anyone above the threshold to a human on reply, no auto escalation, ever.

Set the Threshold Before First Send

Seniority routing costs nothing and protects the biggest deals.
