

More outreach, fewer replies. Here's what actually broke.

The problem wasn't the market. It was the model.

Reply rates below 3%. SDR productivity down 22%.

2025 numbers from a mid-market sales team. More tools, more volume, worse results. The market was crowded but that was not the real reason.

Automating a manual process is not infrastructure.

A sequence fires emails on a schedule. It doesn't adapt, doesn't read signals, doesn't notice when your positioning needs to shift. That's scheduling software, not automation.

Autonomous GTM agents do what sequences can't.

Research the lead. Find the relevant signal. Write to that signal. Monitor reply behavior. Adjust cadence based on real engagement data. Every message earned.

Over 3x pipeline. CAC down 40%. Two quarters.

Teams that moved to autonomous GTM agents saw this within two quarters. Not from sending more. From sending better.

06 ·

Volume was never the problem. Infrastructure was.

If your outreach relies on humans reviewing every reply, managing every follow-up, and adjusting every sequence manually, you haven't built GTM infrastructure. You've built a process.
