

QUALIFIED CASE STUDY

How Demandbase's AI SDR Saved 100 Hours A Month

It wasn't one chatbot. It was three role-specific layers working together, and that's why the numbers held up.

ENTER

● EXHIBIT 02 · THE ARCHITECTURE

One AI SDR, Three Separate Jobs

Piper handles the first conversation with any visitor. AI Conversations routes target accounts to a live rep. AI Meetings closes the calendar loop on its own.

● EXHIBIT 03 · THE ROUTING LAYER

Target Accounts Get Routed To Humans, Live

AI Conversations exists for one reason. High-priority target-account visitors get flagged and routed to a live rep in real time.

● EXHIBIT 04 · THE TWO-MONTH RESULT

Pipeline Doubled, Meetings Tripled

Within the first two months, pipeline sourced doubled and meetings booked tripled. Meetings from target accounts rose 37%.

● EXHIBIT 05 · THE SAVINGS

100+ Hours A Month, \$80K A Year

The inbound SDR team recovered over 100 hours every month. Demandbase saved \$80K annually in SDR headcount cost.

Layered Beats Do-Everything, Every Time

One AI SDR trying to do everything ships mediocre. Role-specific layers ship results like this.
