

USAGE POLICY

Eleven high-risk areas where Anthropic's policy requires human review

Anthropic's Usage Policy, effective November 12, names
them. Anthropic says the review requirements haven't
changed.

ENTER

● EXHIBIT 02 · AREAS 1 TO 6

The first six high-risk areas

Legal, Medical, Finance, Credit, Insurance, Housing. Credit example: approving, denying or setting the amount, rate or limit of a loan.

● EXHIBIT 03 · AREAS 7 TO 11

The other five, including Employment

Employment example: screening, ranking, advancing or rejecting candidates. The rest: education and credentials, healthcare access, public benefits and services, legal status and adjudication.

● EXHIBIT 04 · IN VS OUT

The carve-outs are the part to read closely

Business operations that do not advise or decide about a specific individual are excluded. So is internal analysis that isn't the final recommendation, as is carrying out a decision already made.

● EXHIBIT 05 · WHERE REVIEW SITS

The reviewer must be able to change the outcome

A qualified person reviews with authority to change or modify the recommendation, and the affected person is told AI was used. Review comes before acting on it.

Classify each workflow before you build

Map it to the list first. Then place the human step before anyone
acts.
