

WARNING SIGNS

Your team manually moves data between systems every day

Decisions wait on a person, not a process

You've automated tasks but not end-to-end workflows

Scaling means hiring, not systematizing

IF ANY APPLY → YOU NEED AN AGENT

↓ FRAMEWORK

Your GTM
motion should
run before
anyone opens
email.

47 hours to 9 minutes. Here's the stack.

0

2 The trigger: a lead fills in your form.

Before a rep opens their inbox, enrichment fires, ICP score is calculated, and a personalized email is drafted and sent.

3

Before the stack:
47-hour response
time.

75 minutes of admin per sales call. Reps
spending half their week on data entry,
follow-up scheduling, and manual email
variations.

0

4 After: 9-minute response. 2-minute admin per call.

Reps didn't disappear. They moved to the conversations that needed judgment. The agent handles everything upstream.

05

Every handoff used to need a human.

Enrichment, scoring, routing, outreach, CRM update, follow-up scheduling. Now the human appears where judgment matters.

6 The competitive gap is response speed.

Companies still running manual GTM aren't losing on capability. They're losing because the automated competitor already had the first conversation.
