

THE GAP

45% claim AI in sales.
24% mean it.

The gap between the two numbers is where the actual revenue lives.

READ ON —

CLAIM VS REALITY

Two different surveys, one honest number

Forty-five percent of B2B suppliers say they use AI in sales. Deloitte checked how many run anything genuinely agentic. Twenty-four percent.

☐ SAY THEY USE AI 45

☒ RUN AGENTIC AI 24

THE PAYOFF

The teams that mean it grow faster

Salesforce found eighty-three percent of AI-using sales teams reported revenue growth, against sixty-six percent of teams without it. Seventeen points, real money.

EXHIBIT 03

VERYDIAN

WHERE IT STALLS

Most of that 45% never gets here

Says AI on the deck. Runs a chatbot bolted onto the CRM. Never gets to a workflow that actually executes without a human pushing every step.

EXHIBIT 04

VERYDIAN

THE PROOF

What Thomson Reuters did differently

They built the data foundation first. Reported result: forty percent more closed-won deals and quota attainment averaging a hundred and fifteen percent.

EXHIBIT 05

VERYDIAN

I build the 24%, not the chatbot

My GTM background is Cloud 24 Digital. I know what a bolted-on tool looks like next to one that runs.
