

78% have a pilot. 14% have production.

The gap is an infrastructure problem.

SYS.NODE

02

The model isn't the failure point.

Demos work. The vendor said it was enterprise-ready. But 64% of pilots never ship. The problem lives in the system around the model, not the model itself.

SYS.SIGNAL

03

Data pipelines without clear ownership.

Three teams, two legacy systems, one shared spreadsheet. Nobody agreed who owns the data feed going into production. The agent starves.

FOCUS . NODE

04

No observability means no accountability.

In a demo, you watch it work. In production, it runs at 2am Saturday. You find out it failed when a customer complains Monday.

SEQUENCE

05

Nobody owns the failure response.

When an agent breaks and ownership is unclear, the fastest fix is always the same: shut it off. That's how pilots become permanent pilots.
