

Stop managing Claude Code. Set outcomes instead.

What the `/goal` command actually changes about delegation

PLAYBOOK.NODE

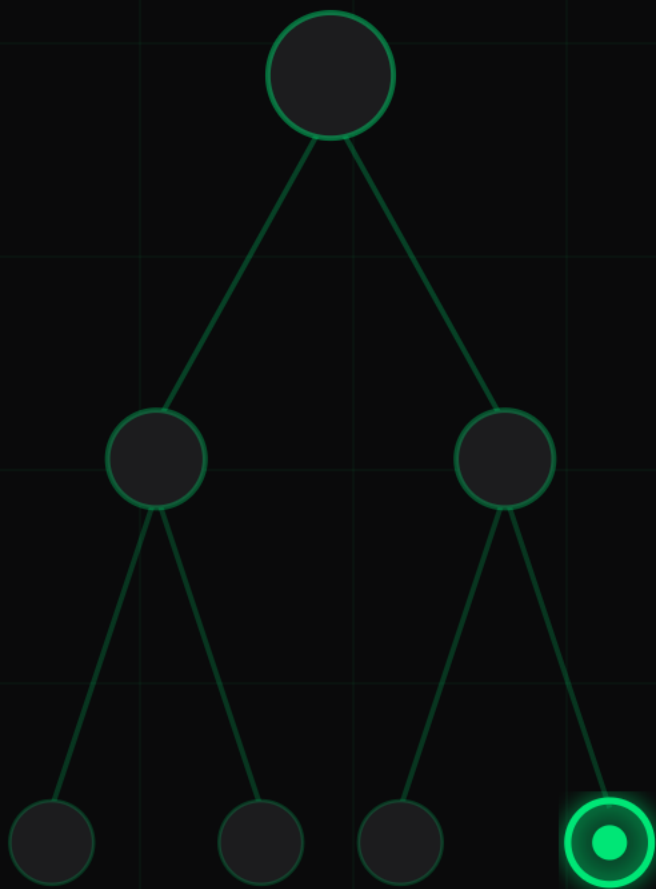

DATA.SCATTER

02

Most people use AI tools as faster autocomplete.

One prompt, one response, repeat. You're still the execution engine. The AI is just faster fingers.

TREE.NODE

03

/goal flips the model:
define the outcome,
not the steps.

Claude Code plans, executes, checks its own
work, and returns only when a judgment call is
needed.

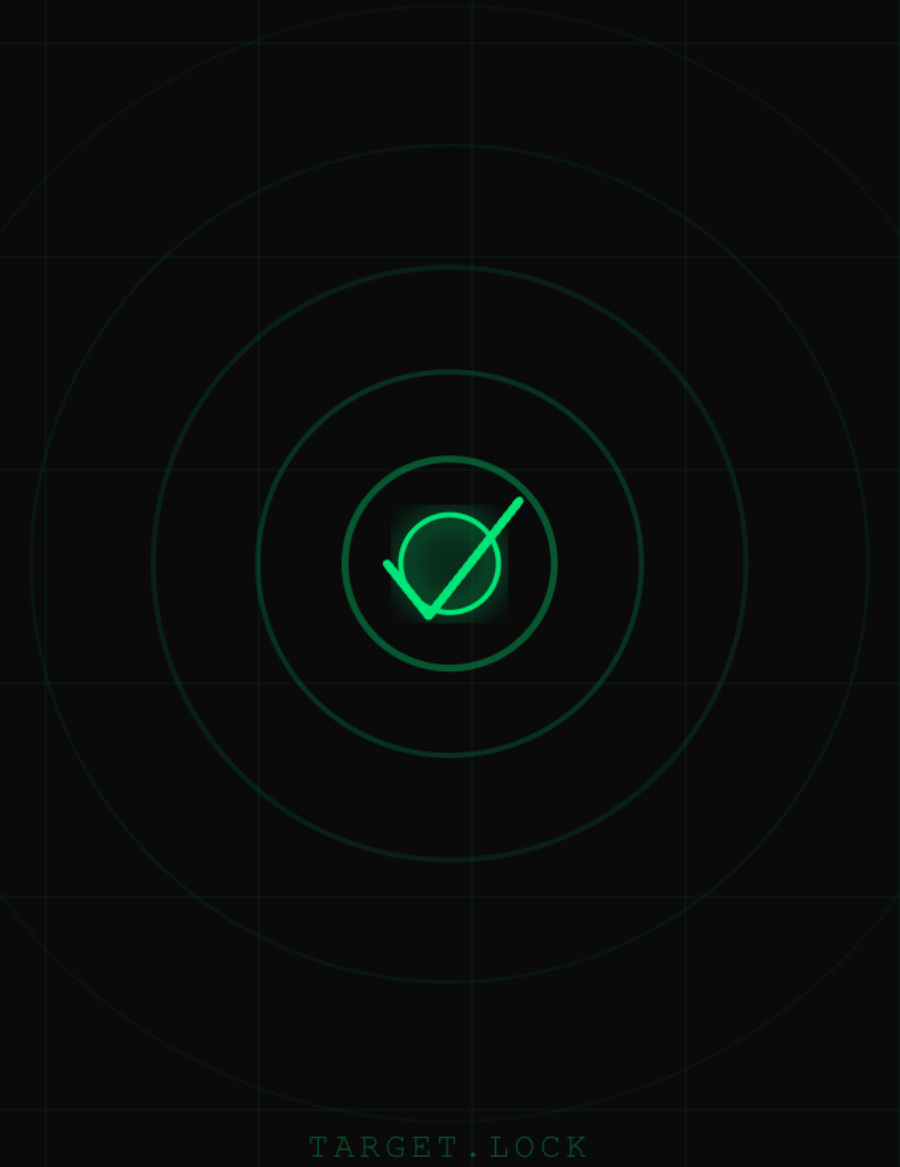

04

SEG.RING

Prompts vs.
outcomes: one of
these Claude Code
can own.

"Refactor billing" is a prompt. "Refactor so
adding a payment provider changes exactly one
file" is an outcome.

05

Can you hand off an outcome and trust the loop?

/goal is the first real answer. The best teams use it to change what they're doing with freed-up time.
