WHERE MOST PROJECTS DIE

02 ·

Most teams configure an agent once and walk away

That works until the workflow changes underneath it. Then nobody notices until a client does.

SYS.SIGNAL

03 ·

HBR: scale agents the way you scale new hires

Onboarding, defined scope, a review cadence.
Not a prompt you write once and forget.

04 ·

Every agent I build gets a written scope document

What it owns. What it can touch. What it
escalates instead of guessing on.

SEQUENCE

05 ·

The weekly review is the step everyone skips

Checking that it ran is not the same as checking
what it decided. That gap is where failures hide.

EXEC.BRIEF / AI INFRASTRUCTURE

Follow me — I build in public

Building agent infrastructure that gets managed, not just deployed
