

THE SHIFT

1 in 5 Codex users can't code

Codex hit 5 million weekly users. Twenty percent of them have
never touched a codebase.

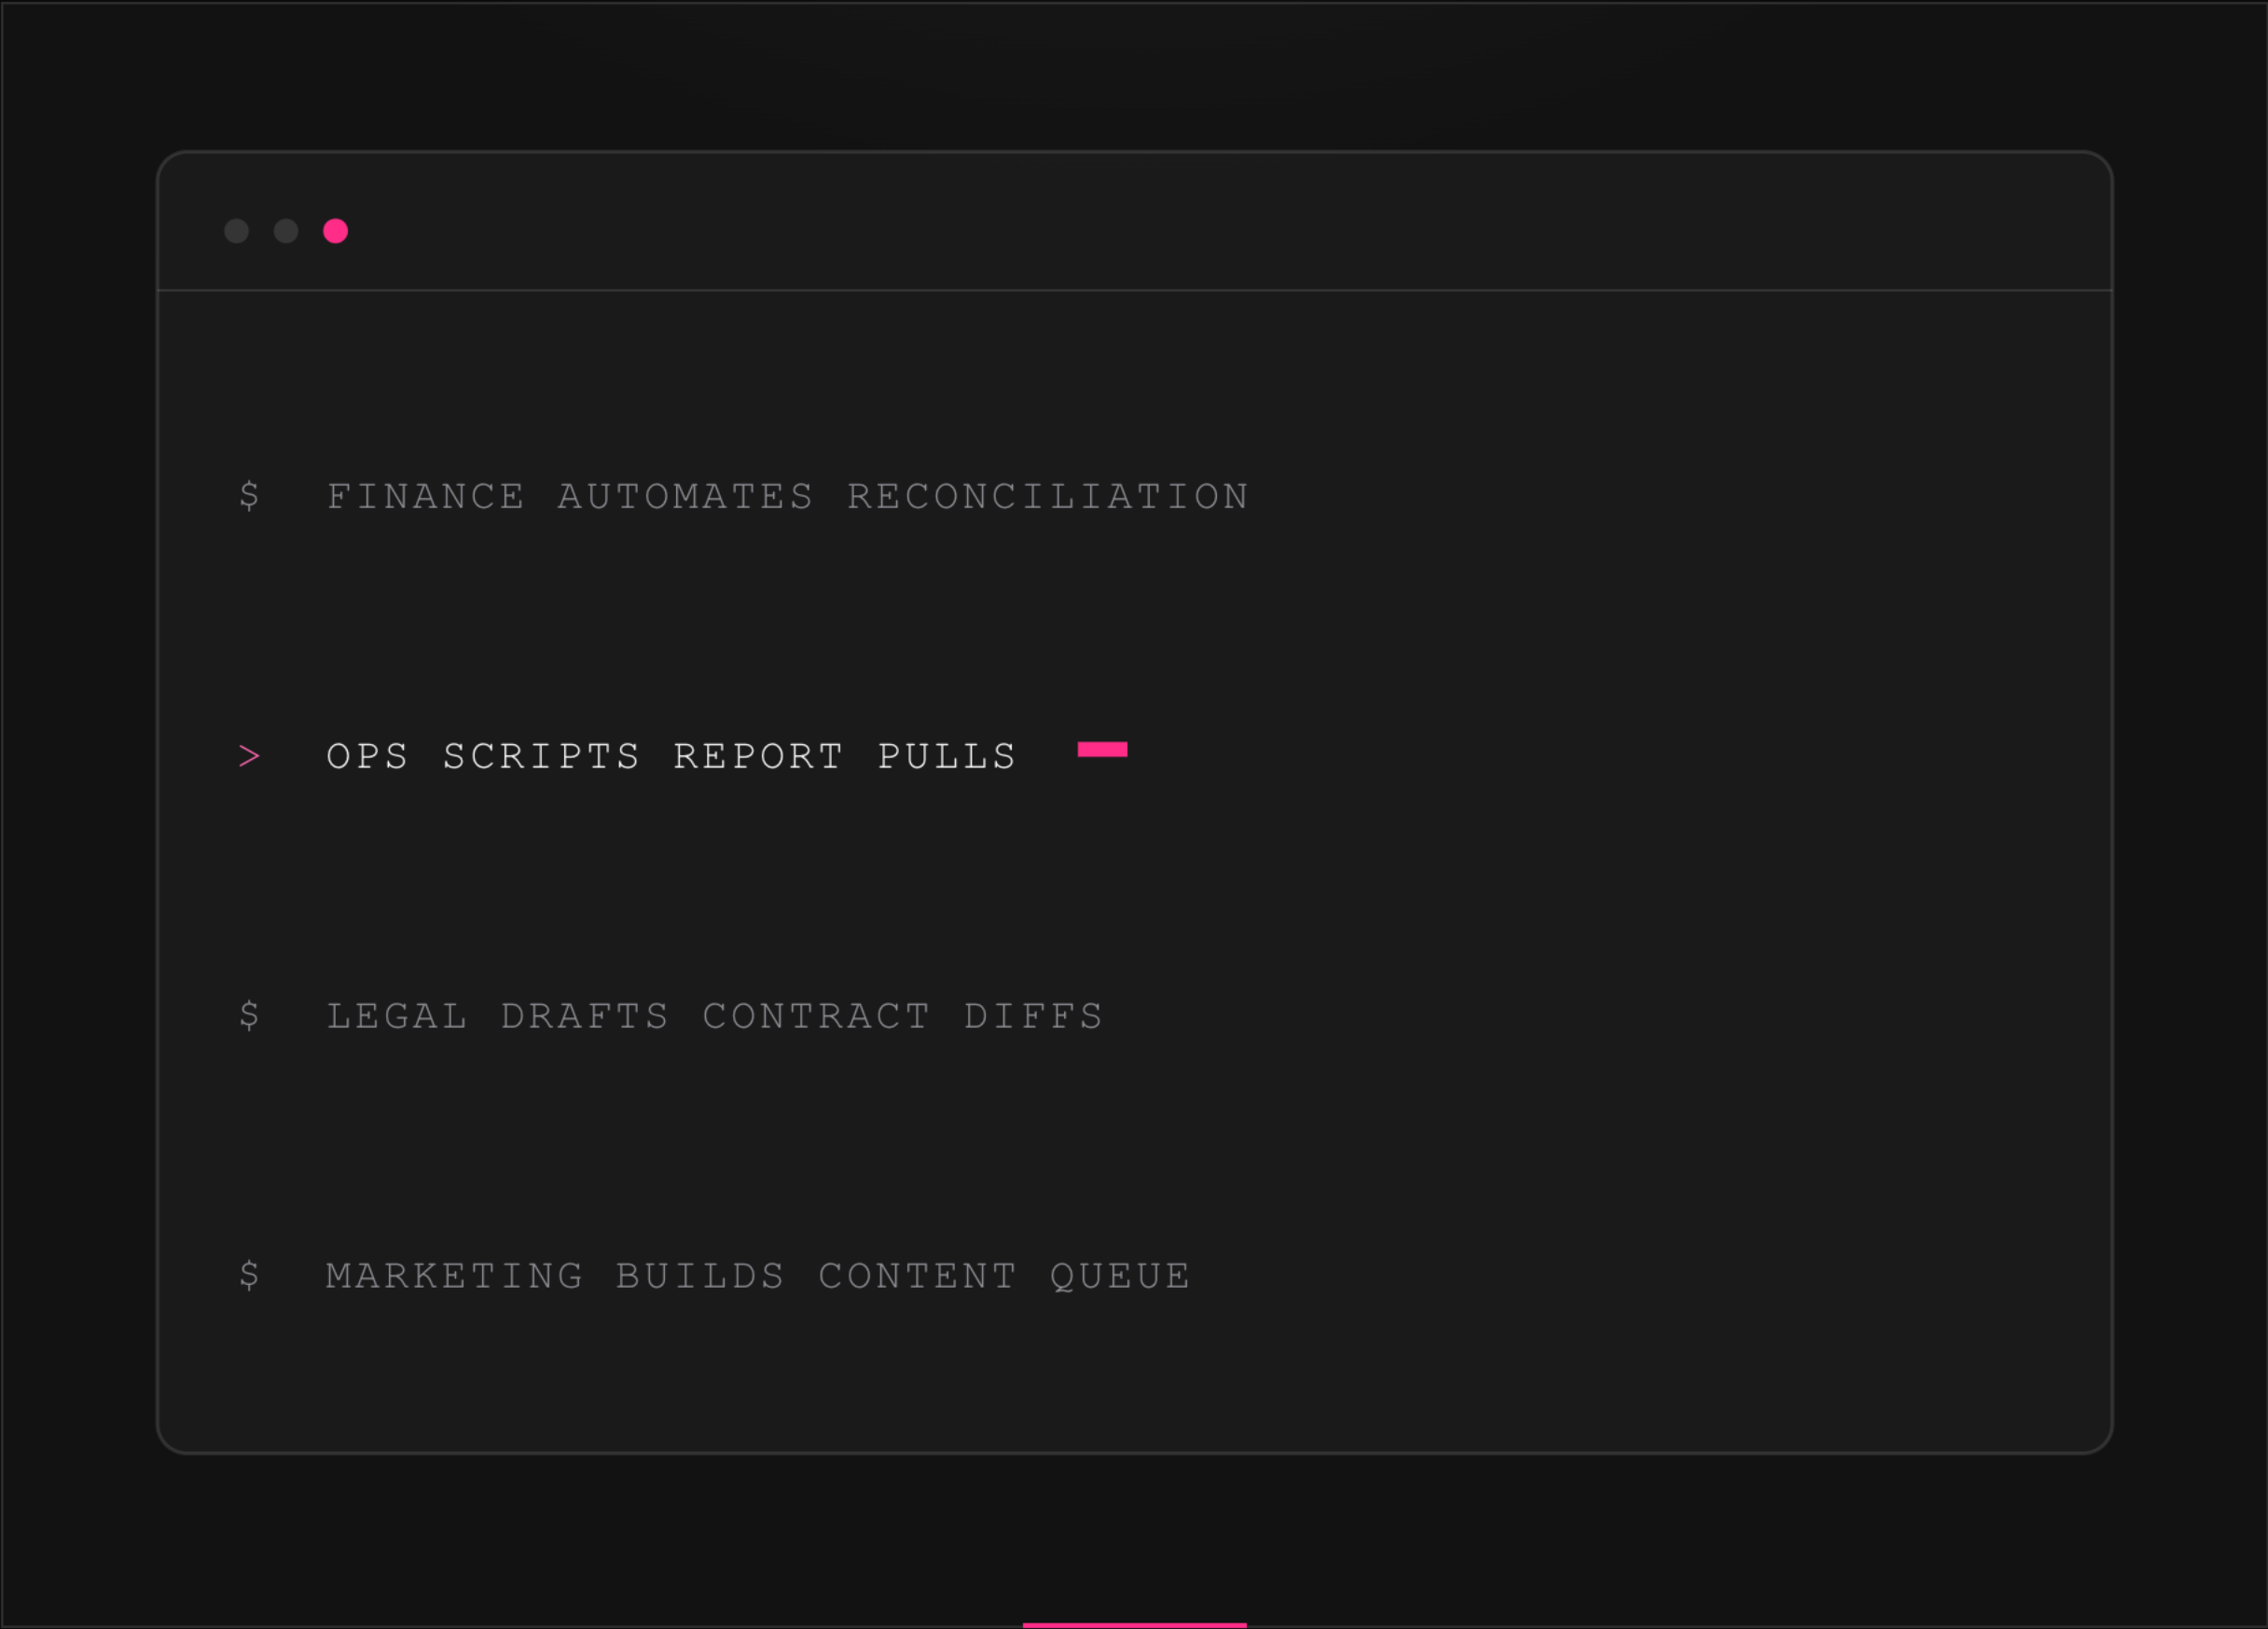

ENTER

● EXHIBIT 02 · WHO'S ACTUALLY USING IT

The user base flipped faster than expected

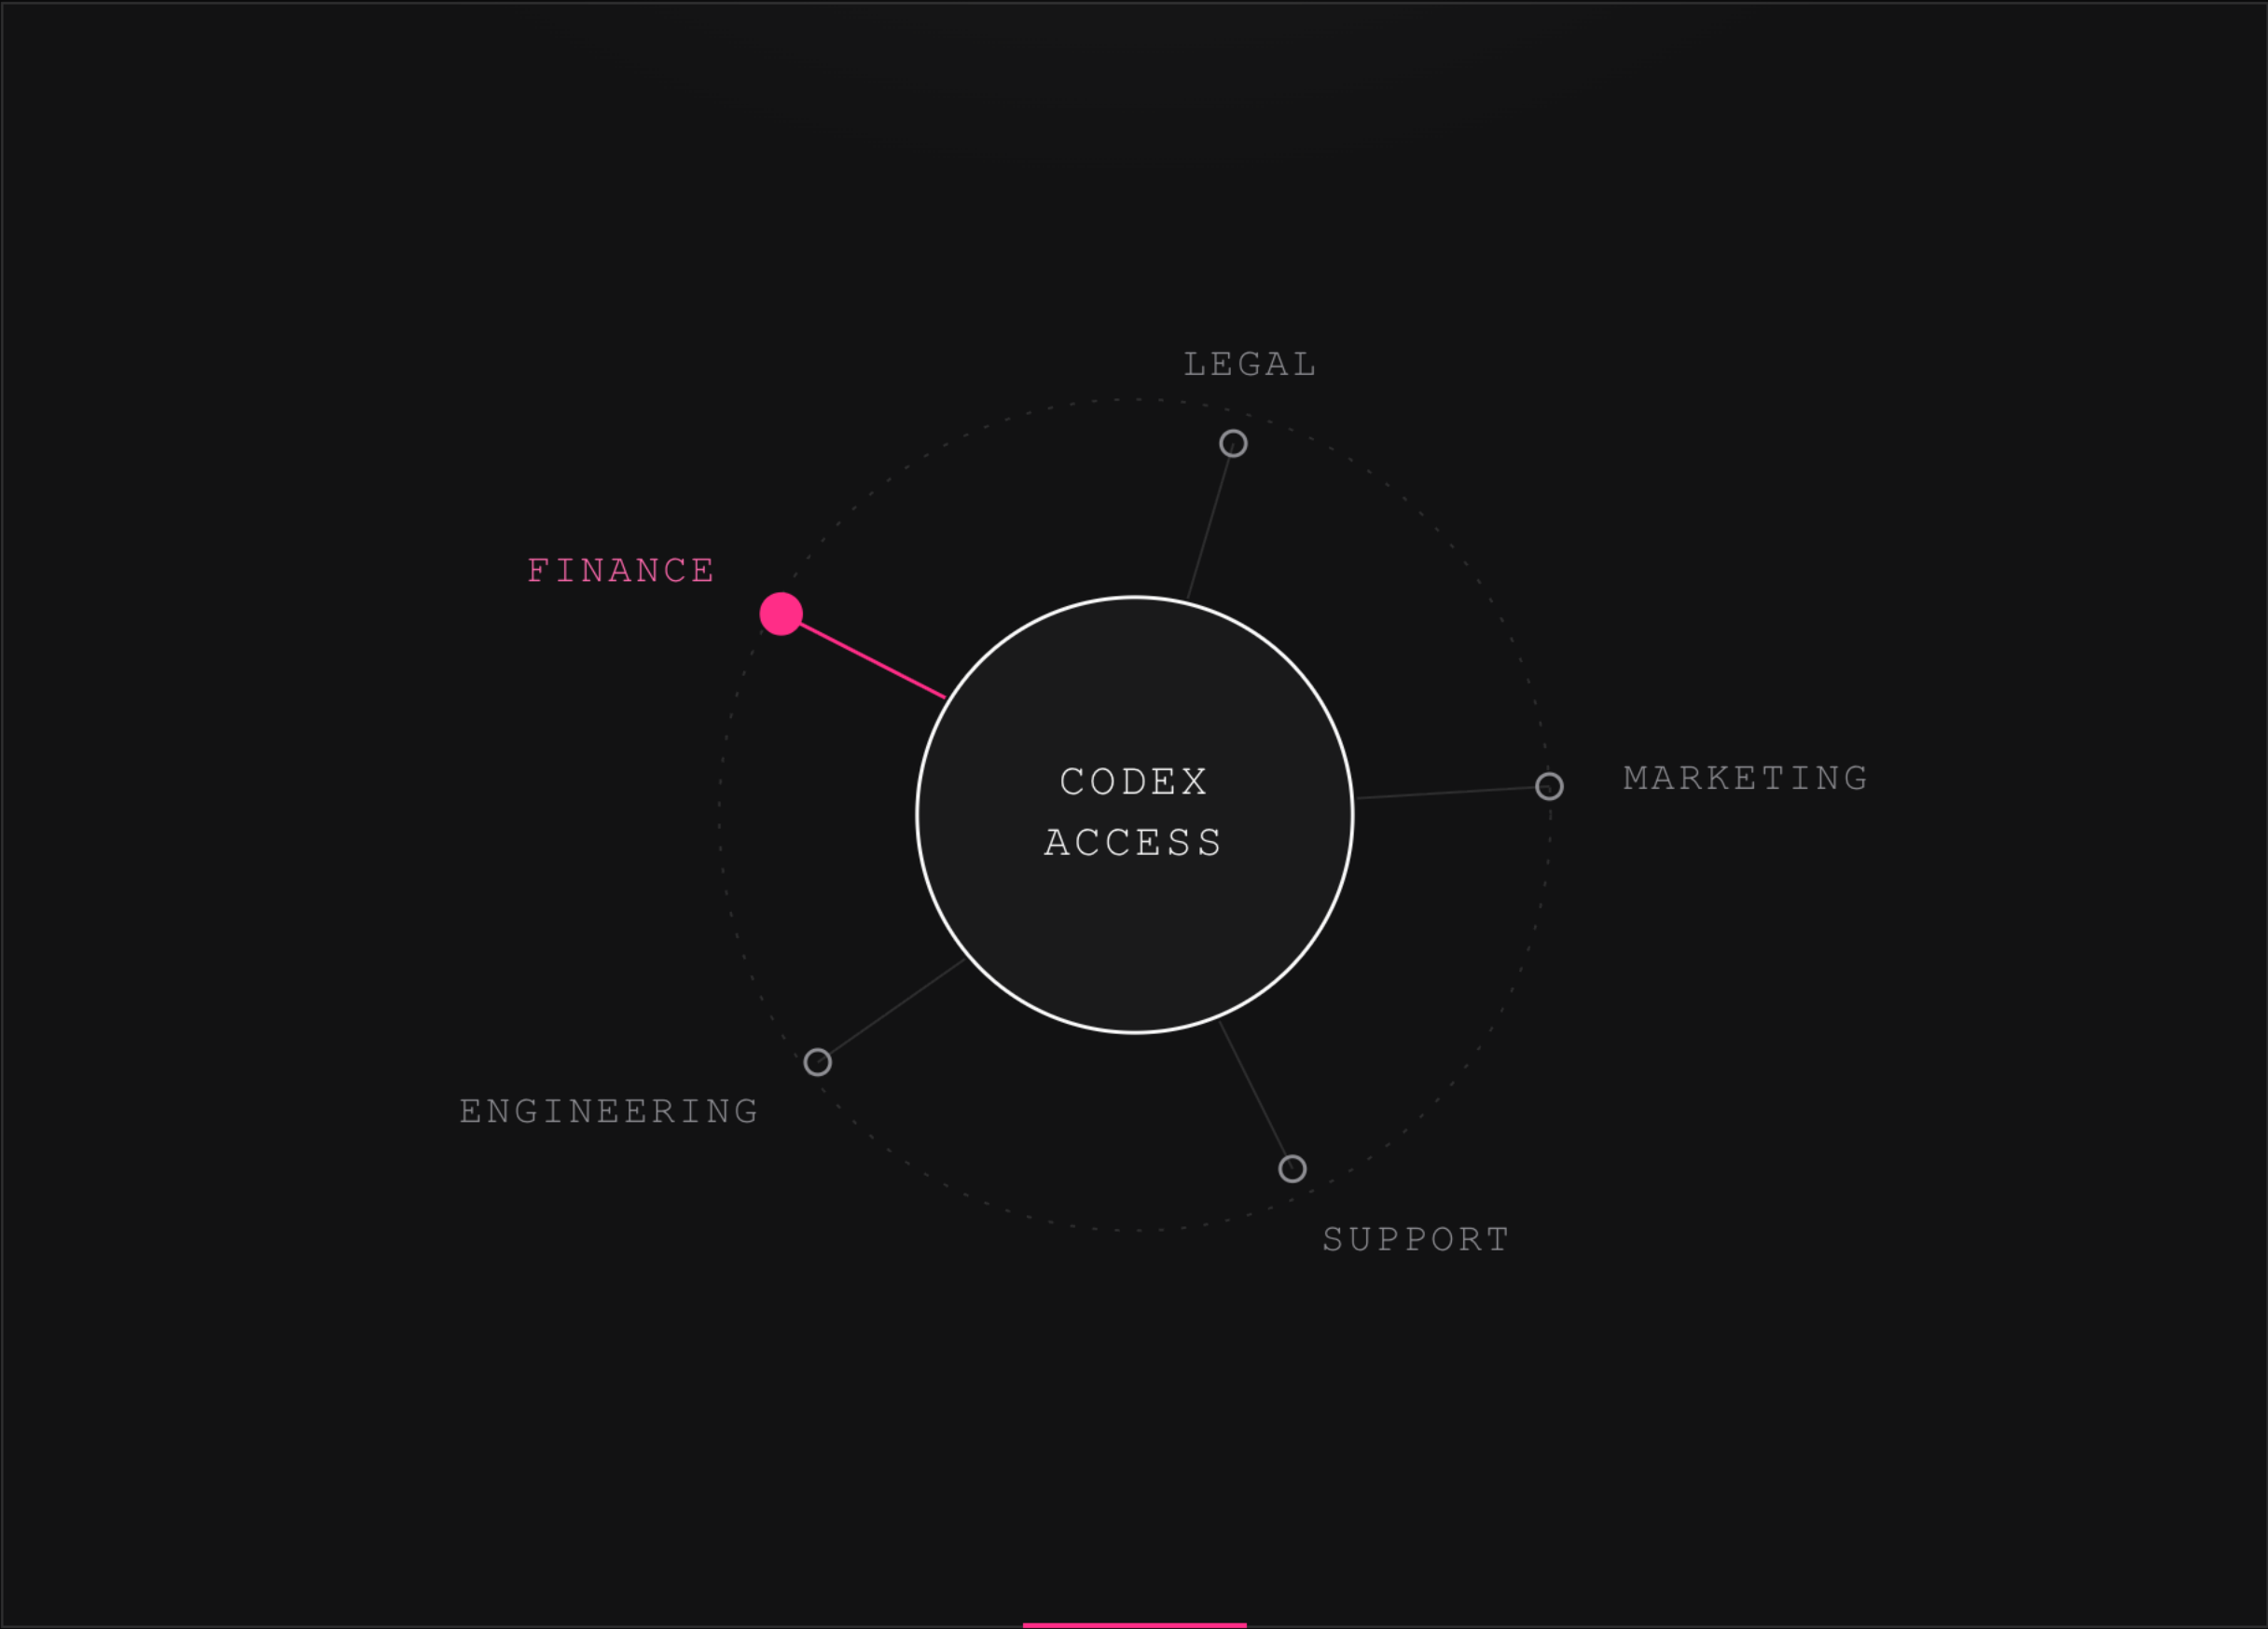

Eighty percent of Codex users are still developers. The other fifth are finance, ops, and legal people who found a tool built for code and started pointing it at spreadsheets.

● EXHIBIT 03 · IN THE WILD

What a non-engineer actually builds with it

Not apps. Small tools that replace a Tuesday of manual work: a script, a checker, a formatter, something that runs once and saves an hour every week after.

● EXHIBIT 04 · THE ROLLOUT

NVIDIA didn't scope this to engineering

Over ten thousand employees got access, across departments that have never opened a terminal before this year.

● EXHIBIT 05 · THE NUMBERS

The growth curve tells the real story

Six hundred thousand weekly users in January. Five million by June. The jump came from people who were never the target market.

Coding agent is already the wrong name

I write about where these tools actually get used, past the marketing category.
