

AGENT OPERATIONS

More agents means you need a stop button

Codex shipped an agents dashboard. I built the same thing
for my own pipeline.

READ ON —

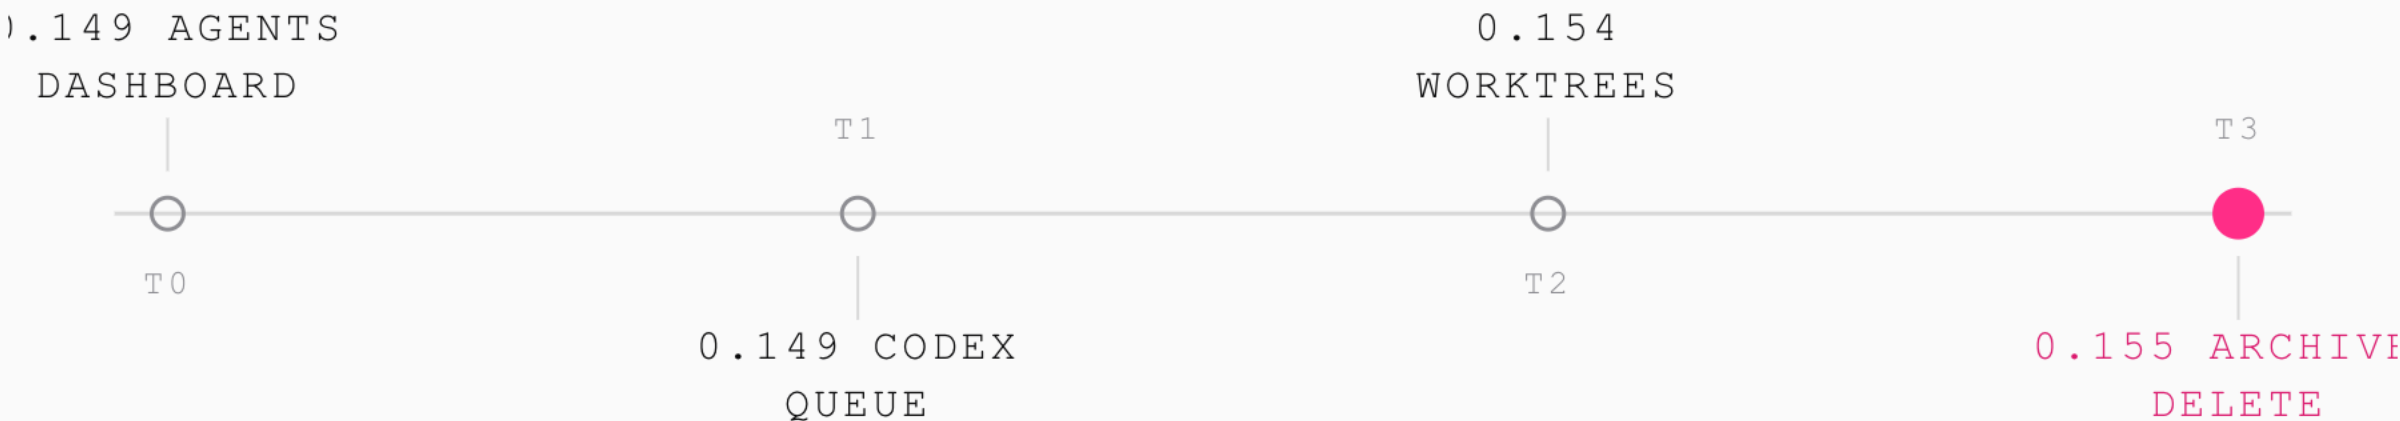

CODEx CHANGELOG

Codex went from one session to many tasks

Per the changelog: dashboard and queue in v0.149.0, worktrees in v0.154.0, archive and delete in v0.155.0.

EXHIBIT 02

VERYDIAN

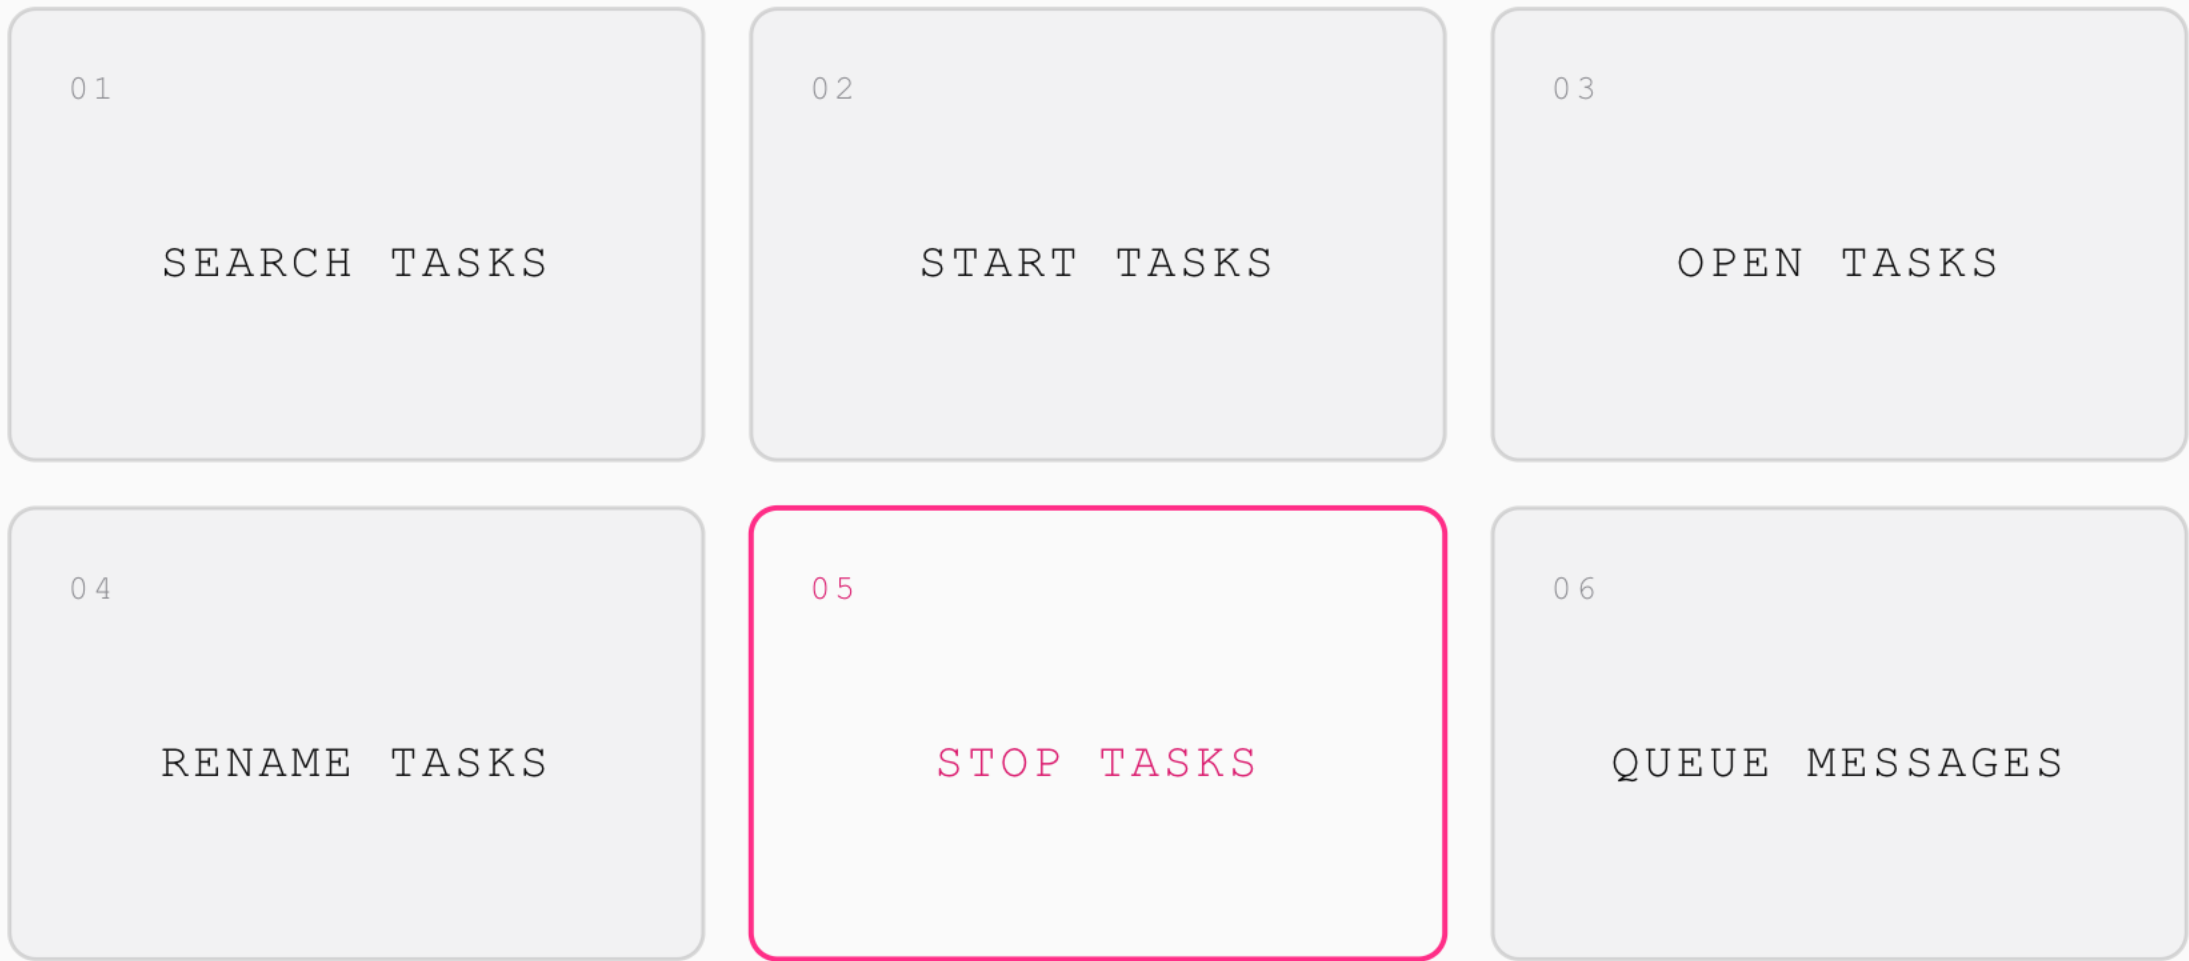

THE REAL FEATURE

What a dashboard actually does

Search, start, open, rename, stop. The dashboard verbs are bookkeeping, not intelligence.

EXHIBIT 03

VERYDIAN

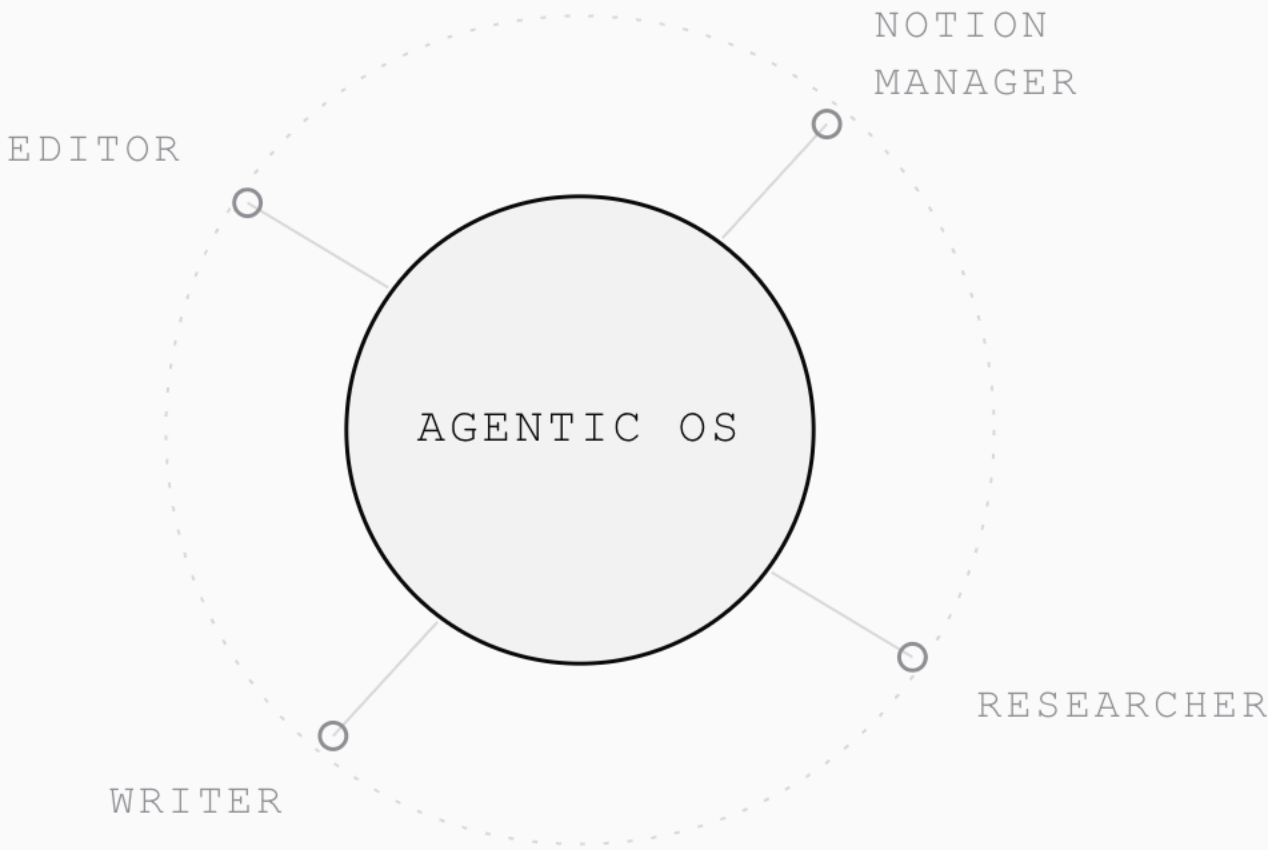

AGENTIC OS

My pipeline needs the same list

The weekly content run goes through Claude Code subagents. Agentic OS on port 4400 is where I see them and stop them.

EXHIBIT 04

VERYDIAN

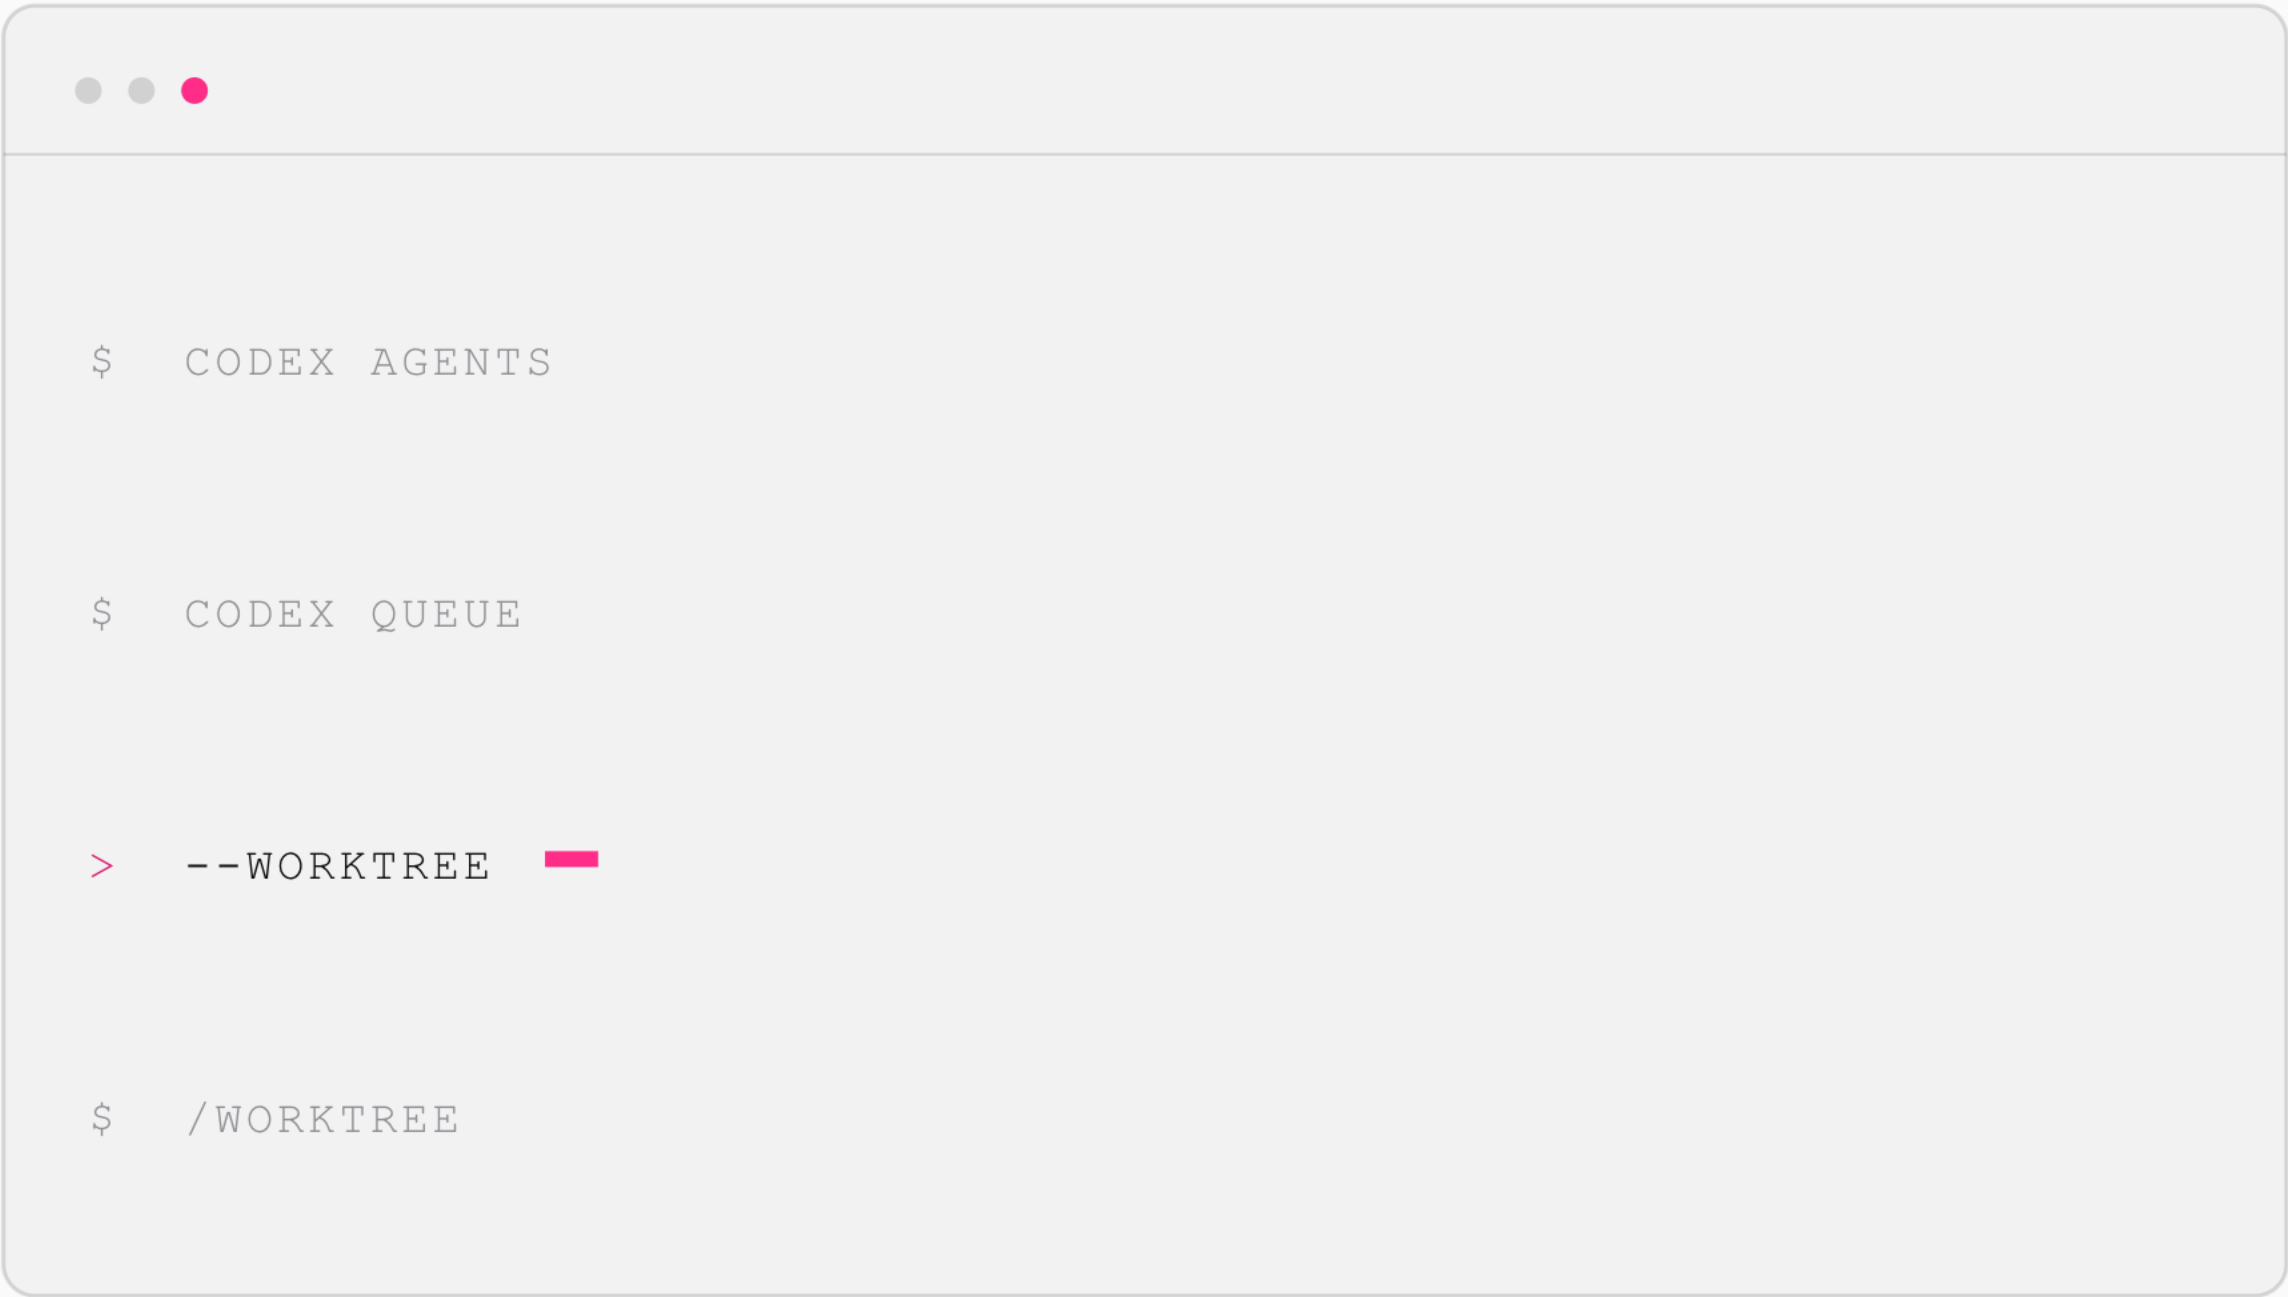

PARALLEL WORK

Isolation is the next problem

Codex added worktrees so new or forked sessions get their own checkout. Parallel agents editing the same files collide.

EXHIBIT 05

VERYDIAN

Spec the stop button first.

Before you write agent prompts, list what you need to see and end.
