WHAT GATES MEASURE

My validator counts words. The slide breaks on characters.

Three labels passed the word limit in August and still broke on the rendered slide.

02 · same label, two views

What the validator sees vs what the reader sees

'Multiagent By 2029' is three words and passes the limit. On the slide it rendered as MULTIAGENT B.

VALIDATOR SEES	READER SEES
— 3 WORDS	• MULTIAGENT B
— UNDER THE LIMIT	• CLIPPED AT EDGE

FIG. 2 · VERYDIAN

03 · the record

Two weeks in August, three broken labels

Aug 23: one clipped, one garbled. Aug 31: a currency label ran off the canvas. All three were found by looking at the PNGs. The rule that came out of it: roughly two short words.

FIG. 3 · VERYDIAN

04 · the pipeline

Only the last step can see the clip

The validator checks words, the render draws characters, and nothing measures the fit. A person looks at the PNGs.

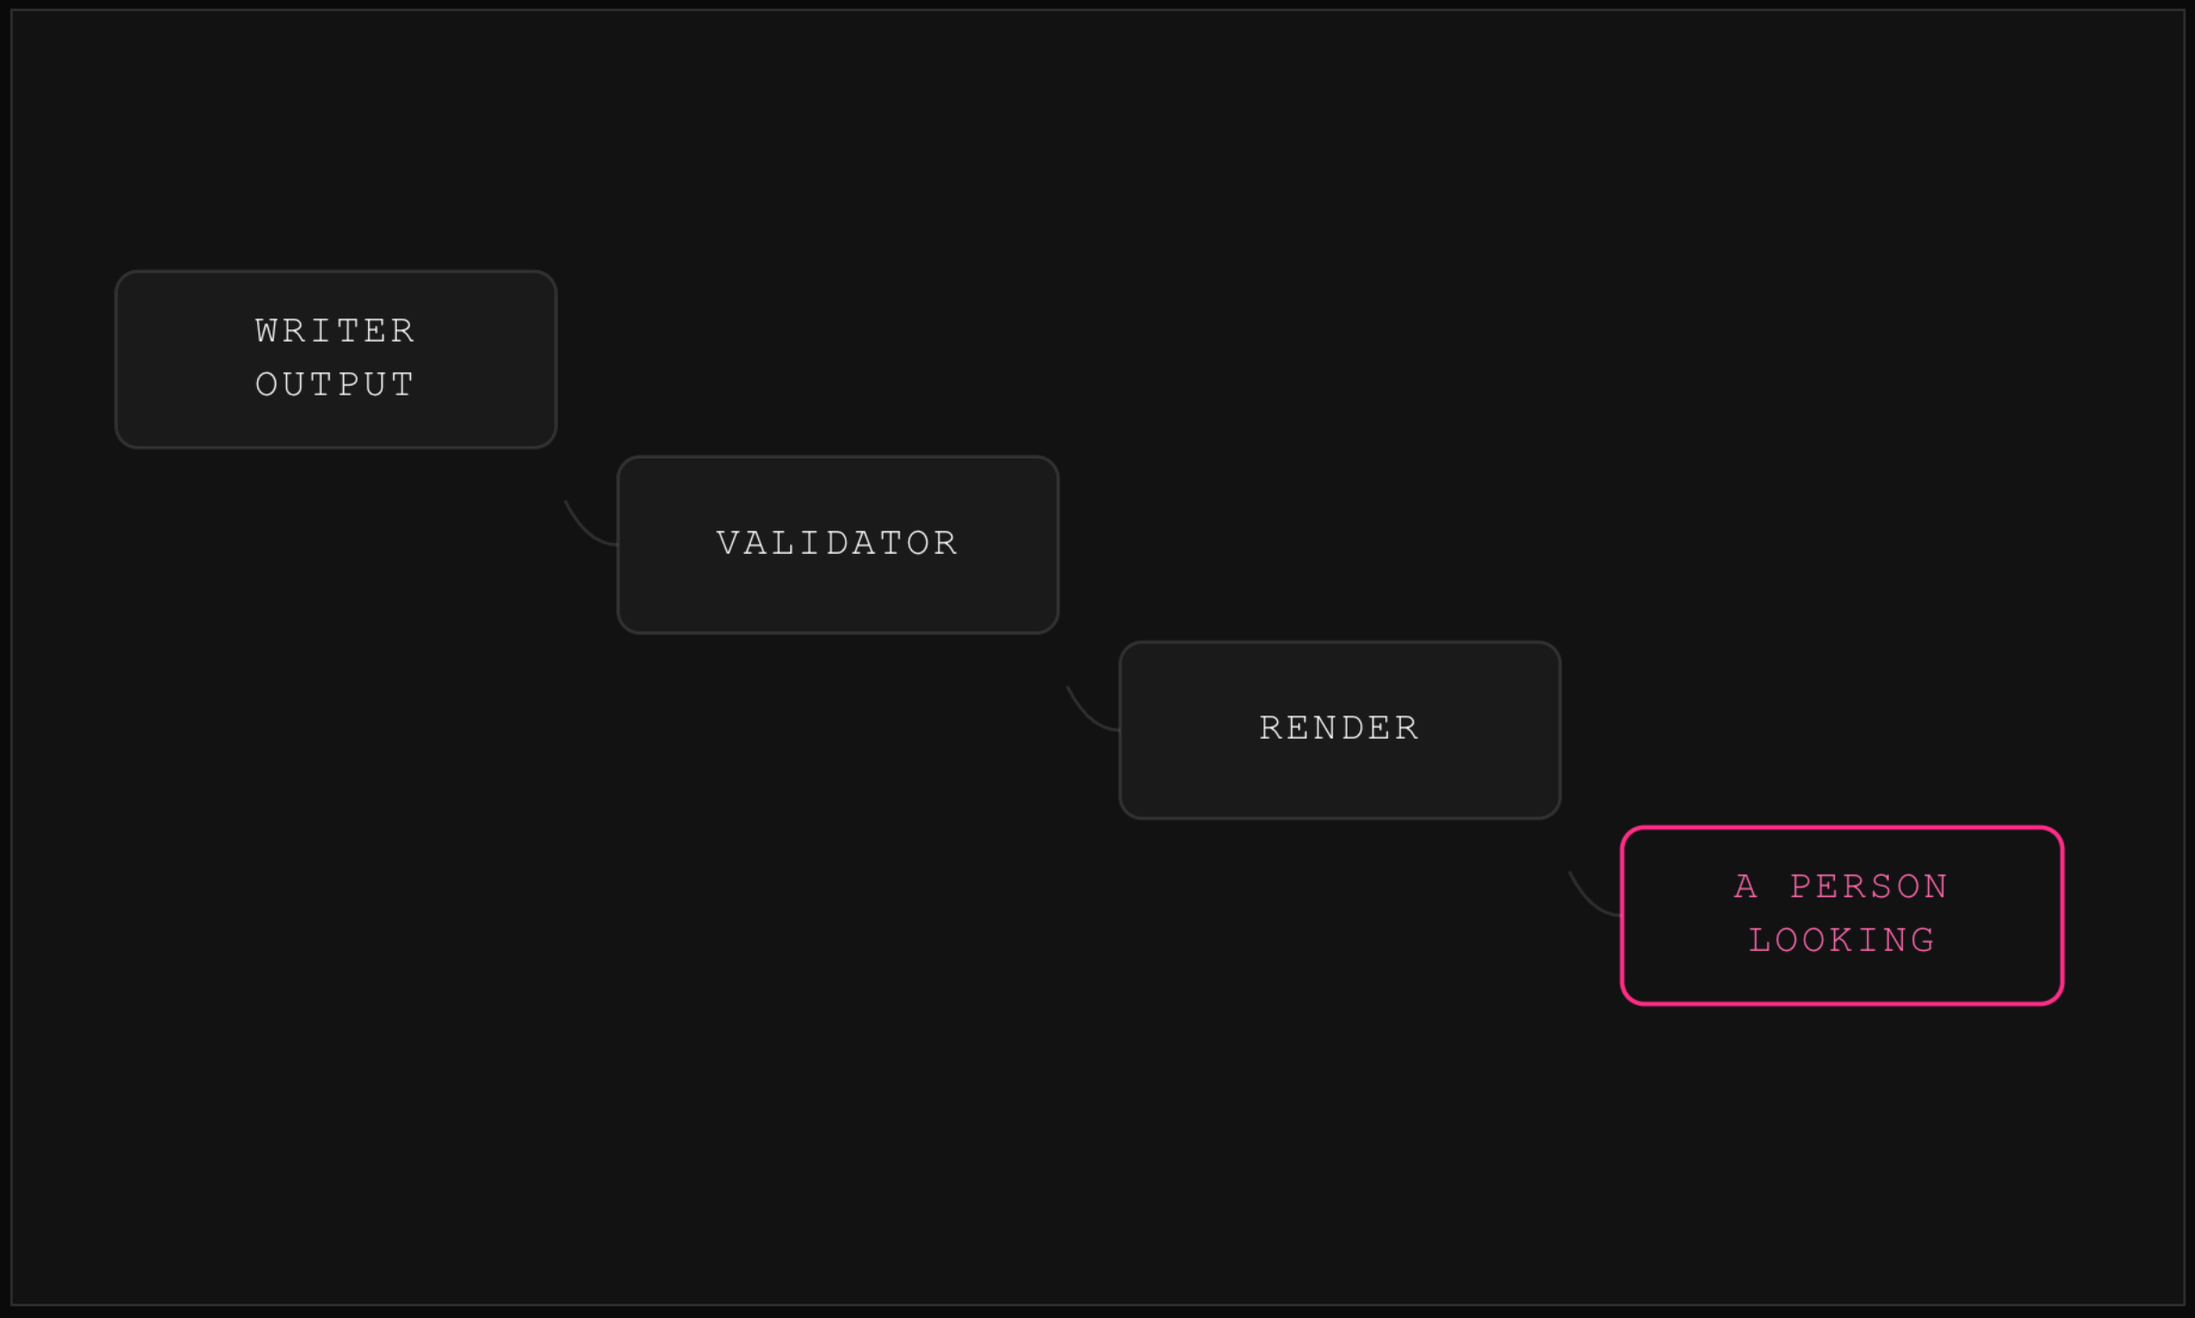

FIG. 4 · VERYDIAN

05 · what it counts

Each gate measures one thing

Name what each check counts. Then ask what a reader sees in one second that it can't.

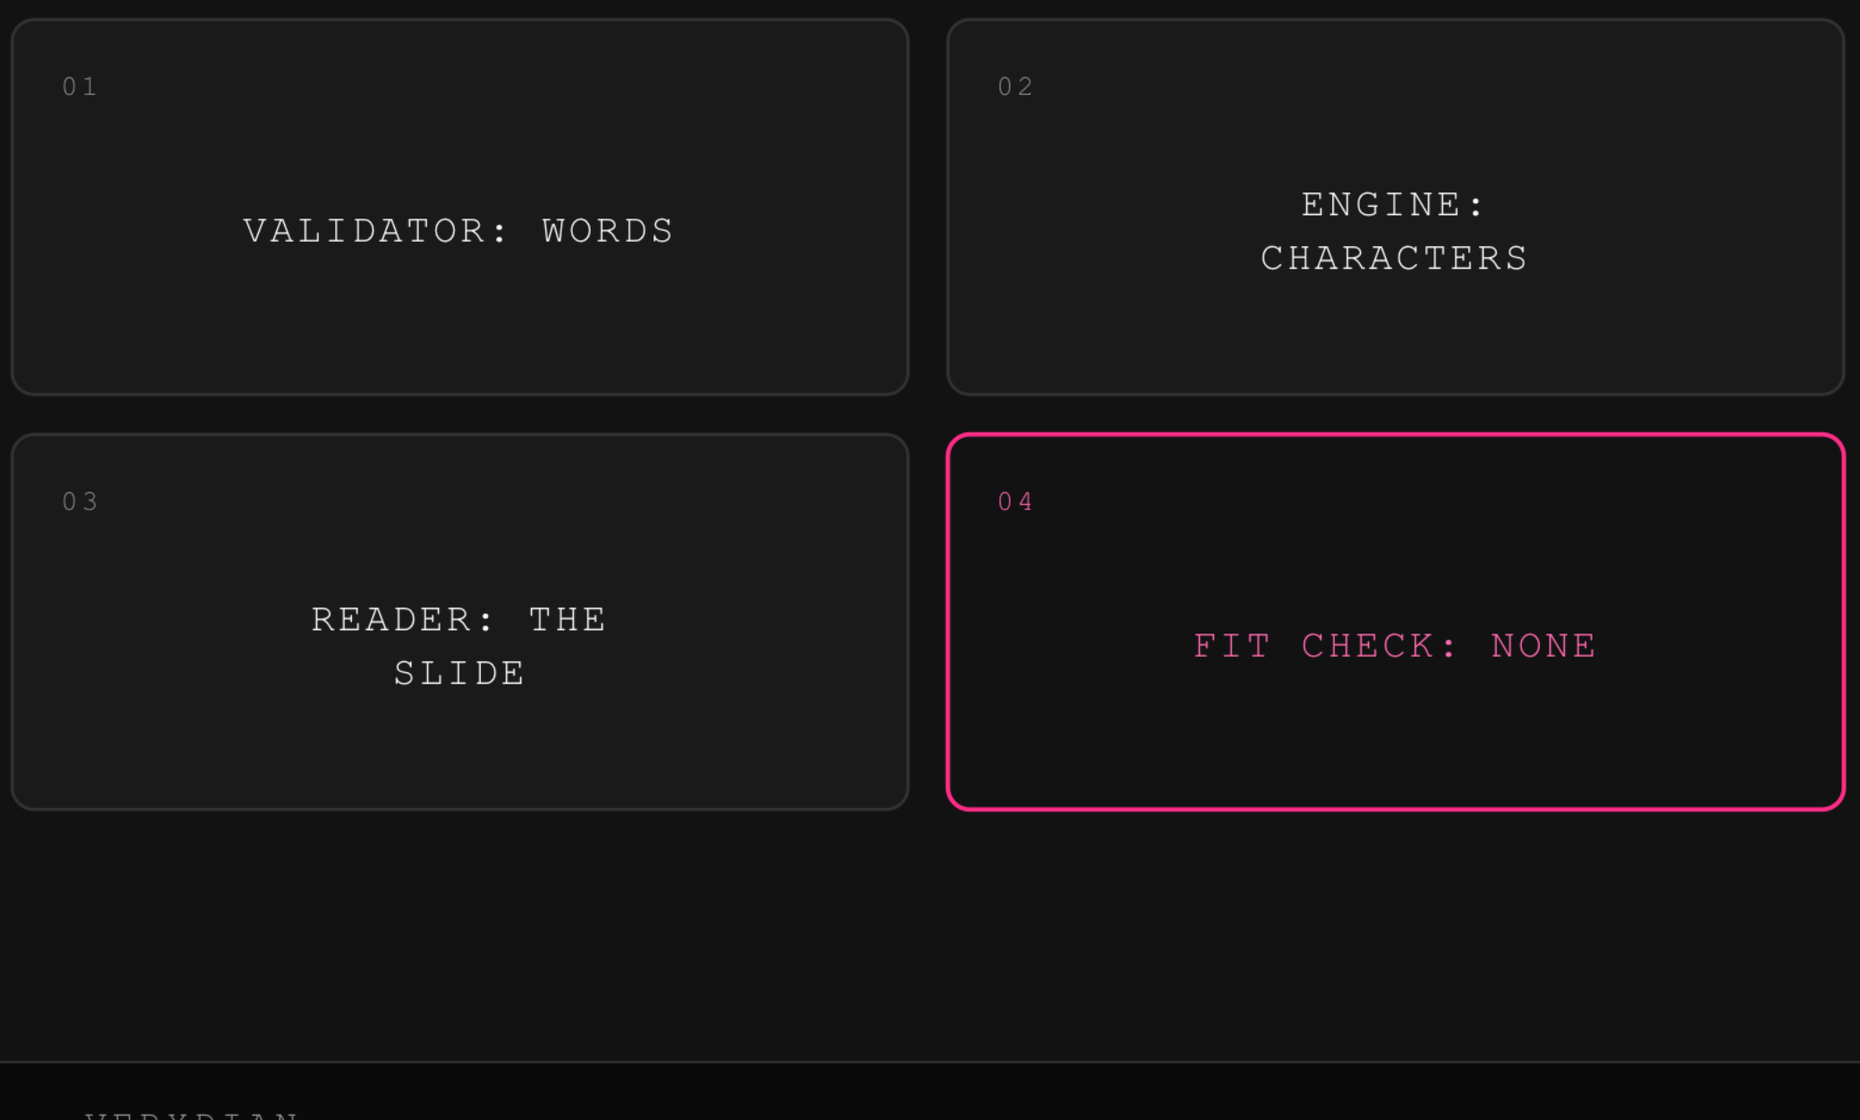

FIG. 5 · VERYDIAN

Write down what each gate measures

Then look at what the reader will see.
